DIRECTIONS

RATS

Mix thoroughly one part of Rax Powder with parts of a suitable bait material which is avail-, such as corn meal, rolled oats, dog food, ng mash, stock food, etc. A small amount of and oil, such as mineral, corn, peanut, or any r edible oil, may be used, up to 5%, when bait is so dry that it might have a tendency ust.

hen perishable baits, such as ground meat, vegetables or similar material are used, bait cements should be made in late afternoon and laced daily with fresh bait.

aits should be placed in amounts of from 2 up to 1 lb. in locations frequented by rats or ere rats have been known to feed. Baits must protected from dogs, cats, poultry, livestock, by bait boxes, cages or other suitable means.

aits should be examined regularly and re-ced when completely eaten. If bait moulds, omposes or becomes sour it should be replaced.

MICE

or controlling mice follow the same general ctions as for rats except that the amount of placements should be smaller (1 teaspoonful tablespoonful) and more placements should made.

lice are more difficult to control than rats and plete control may take a longer period of ing.

IMPORTANT

Baiting should continue as long as evidence of feeding is observed. Except in extremely heavy infestations this should be from five days to two weeks. Where a continuous source of infestation is present from nearby dumps or fields, permanent bait stations should be used and bait placed in them as often as necessary.

CAUTION

Rax Powder contains as its active ingredient an anti-coagulant chemical therefore baits prepared with Rax Powder must be protected from or placed where humans, livestock, poultry or pets will not accidentally eat them. In case baits are accidentally eaten, give a tablespoonful of salt in a glass of warm water and repeat until vomit fluid is clear. Call a physician immediately.

KEEP OUT OF REACH OF CHILDREN

NOTE FOR PHYSICIANS: When a human has been known to have accidentally ingested any RAX POWDER, blood transfusions combined with intravenous injections and oral doses of Vitamin K are indicated as in the case of hemorrhage caused by overdoses of Dicumarol†.
