HOUSEPLANT INSECT MIST

Zoecon Houseplant Insect Mist offers the unique advantage of a combination of the insect growth regulator (ALTOSID®) and synthetic pyrethroid (RESMETHRIN). The insect growth regulator, a member of a new class of insect control agents, gives long term control of insects.

The pyrethroid provides rapid knockdown of insects and adult mites. For plants which are normally misted, this new water based formulation provides the moisture required by the leaves on the day of use.

DIRECTIONS FOR USE
GENERAL CLASSIFICATION

It is a violation of Federal Law to use this product in a manner inconsistent with its labeling. See accompanying plant list.

INSTRUCTIONS FOR USE

When aphids, whiteflies, mites, mealybugs or scales appear, mist twice, 7 days apart. Repeat treatment if infestation occurs. Mist newly acquired plants twice, 7 days apart.

1. SHAKE WELL BEFORE USING
2. Direct applicator toward plant at a distance of 10 to 14 inches
3. Apply a fine mist by depressing plunger quickly and firmly
4. Mist for complete coverage of all plant surfaces, including undersides of leaves, minimize runoff or drip

PRECAUTIONS

1. Protect fabrics and household furnishings
2. Avoid misting plants in direct sunlight or when foliage is wet
3. Do not mist plants grown for human consumption or certified food or feed

Do not mist near aquaria or terraria containing cold-blooded pets (fish, amphibians, reptiles)

STORAGE AND DISPOSAL

Protect from freezing or extreme heat
Do not reuse empty container
Wrap empty container and put in trash collection

WARRANTY AND CONDITIONS OF SALE

Zoecon Corporation warrants that this product conforms to the chemical description on the label and is useful for the control of pests on houseplants as described in the accompanying labeling. Neither Zoecon nor the seller makes any other warranty, express or implied.

ZOECON
HOUSEPLANT INSECT MIST
EFFECTS ON HOUSEPLANTS

Zoecon Houseplant Insect Mist offers unique advantages in a new combination of insect growth regulator (ALTOSID®) and synthetic pyrethroid (RESMETHRIN). The insect growth regulator, a member of a new class of insect control agents, gives long term control of insects. The pyrethroid provides rapid knockdown of insects and adult mites. For plants which are normally misted, this water-based formulation provides the moisture required by the leaves on the day of use.

Use as directed to control the indicated common pests. Plants listed can be affected by a large variety of insect species. This product has been tested against the set of most common occurrence. Treat only the plants listed on the label.

This product can cause damage to open blossoms. Plants in poor condition may be more susceptible to damage when treated with any chemical.

LIST

Begonia spp	Fibrous and tuberous Begonias
Brassaia actinophylla	Schefflera (some pitting of foliage may occur)
Chamaedorea elegans	Neanthe bella palm (dwarf palm)
Chrysalidocarpus lutescens	Areca palm
Crassula argentea	Jade Plant
Dieffenbachia amoena	Dumb cane
Dizygotheca elegantissima	False aralia
Dracaena marginata	Dracena
Euonymus japonica	Box leaf Euonymus
Fatshedera lizei	Tree Ivy
Fatsia japonica (Aralia sieboldii Aralia japonica)	Japanese fatsia (aralia)
Fittonia verschaffeltii	Nerve plant, Mosaic plant
Fuchsia spp	Lady's eardrop
Hedera helix	English Ivy
Monstera deliciosa	Philodendron split leaf
Pelargonium (Geranium) spp	Ivy leaf and garden variety geranium
Philodendron scandens	Philodendron, heart leaf
Pilea cadierei	Aluminum plant
Podocarpus macrophylla	Chinese podocarpus Yew Pine
Rhaphidophora aurea (Scindapsus aureus Pothos aureus)	Golden pothos
Saintpaulia ionantha	African violet
Setcreasea purpurea	Purple heart
Sinningia speciosa (Gloxinia speciosa)	Gloxinia
Tolmiea menziesii	Piggyback plant
Tradescantia fluminensis	Wandering Jew
Zebrina pendula	Wandering Jew
