April 1997

Handbook

Continuous Emission Monitoring Systems for Non-criteria Pollutants

Center for Environmental Research Information
National Risk Management Research Laboratory
Office of Research and Development
U.S. Environmental Protection Agency
Cincinnati, OH 45268

Acknowledgments

This document was developed and prepared under EPA Contract No. 68-C3-0315, Work Assignment 3-39, by Pacific Environmental Services, Inc. (PES) and its consultants, James A. Jahnke, Ph.D., Source Technology Associates, and James W. Peeler, Emission Monitoring, Inc. (EMI), under contract to Eastern Research Group, Inc. Dr. Jahnke and Mr. Peeler were the principal authors. Phillip J. Juneau and Laura L. Kinner, EMI, assisted with the preparation of the handbook with Mr. Juneau writing Chapter 5 and Dr. Kinner preparing the initial version of Chapter 7 and assisting with Chapter 3. The EPA project officer was Justice A. Manning, Center for Environmental Research Information, Office of Research and Development. Special thanks are extended to Dan Bivins, EPA's Emissions Measurement Center, for this guidance and technical support during the preparation of the handbook. Further technical and editorial support was provided by PES staff through John T. Chehaske, project manager. Mr. Bivins and Tom Logan, Office of Air Quality Planning and Standards, and Robert G. Fuerst, National Exposure Research Laboratory, ORD, provided peer review for the handbook. Lastly, Scott Evans, Clean Air Engineering; Paul Reinermann, III, Pavilion Technologies, and Gus Eghneim, Ph.D., P.E., Texas Natural Resource Conservation Commission, were kind enough to provide comments on Chapter 4 of the document in a very timely manner. To each person responsible for the final product sincere thanks are extended.

Notice

The information in this document has been compiled wholly, or in part, by the U.S. Environmental Protection Agency (EPA) under Contract No. 68-C3-0315, Work Assignment No. 3-39, issued to Eastern Research Group, Inc. (ERG). The work was performed by Pacific Environmental Services, Inc. (PES) and its consultants, Source Technology Associates, and Emission Monitoring, Inc. under subcontract to ERG. This document has been subjected to EPA's peer and administrative review and has been approved for publication as an EPA document. Mention of trade names or commercial products does not constitute endorsement or recommendation for use.

Contents

Acknowledgments ii
Notice ii

Chapter 1 Introduction 1

1.1 Background and Objectives of the Handbook 1

1.2 Evolution of Continuous Emission Monitoring - Regulatory Programs 1

1.3 Current Status of Continuous Emission Monitoring - Monitoring Technology 2

1.4 Organization of the Handbook 4

Chapter 2 Implementing Rules - Requirements for Installation of CEM Systems 6

2.1 Clean Air Act, RCRA, and Other Federal Monitoring Requirements 6

2.1.1 NSPS Requirements 6

2.1.2 Acid Rain Program 13

2.1.3 NESHAP and Title III - MACT Standards 14

2.1.4 Regulations for Sources Burning Hazardous Waste 16

2.1.5 Part 503 Sewage Sludge Incinerators 18

2.2 State and Local Agency Programs 18

2.2.1 State and Regional Initiatives 19

2.2.2 Compliance Assurance Monitoring (CAM) Program 23

2.2.3 Open Market Trading 24

Chapter 3 Monitoring Technology - Instrumentation 26

3.1 Monitoring Systems for Non-criteria Gases 26

3.1.1 Sampling Problems for Reactive and Condensable Gases 26

3.1.2 Solutions to Sampling Problems 29

3.1.3 Analytical Techniques 34

3.2 Monitoring Systems for Particulate Matter 43

3.2.1 Sampling Problems for Particulate Matter 43

3.2.2 Continuous Particulate Monitoring 45

3.3 Monitoring for Metals 49

3.3.1 Sampling Problems for Metals 49

3.3.2 Mercury Monitoring Methods 49

3.3.3 Multi-Metal Methods 51

Chapter 4 Alternatives to Monitoring Instrumentation 56

4.1 Parameter Monitoring 56

4.2 Parameters and Sensors 57

Contents (continued)

4.3 Parameter Monitoring Used as an Indicator of Equipment Operation and Maintenance . . 58
4.4 Parameter Monitoring Used as a Surrogate for Emissions 58
4.4.1 Parameter Monitoring as a Surrogate for Reporting Excess Emissions 58
4.4.2 Parameter Monitoring for Direct Compliance 59
4.5 Emission Modeling - Predictive Emissions Monitoring Systems 60
4.5.1 First Principle Models 61
4.5.2 Empirical Modeling 61
4.5.3 Model Development 64
4.5.4 Model Quality Assurance 64
4.5.5 Model Limitations 65
4.6 Issues in Parameter Monitoring 65
Chapter 5 System Control and Data Recording - Data Acquisition and Handling Systems 70
5.1 Option 1: Simple Data Recording Device 70
5.2 Option 2: Plant Mainframe Computer System 71
5.3 Option 3: Commercial DAHS 71
5.3.1 Emission Data Recording 71
5.3.2 Emission Data Display 72
5.3.3 Sampling System Control 73
5.3.4 Calibration Control and Recording 73
5.3.5 Alarms 74
5.3.6 Plant Computer Interface 74
5.3.7 Report Generation 75
5.3.8 Multitasking 76
5.3.9 Expansion 76
5.3.10 Hardware 76
5.4 Summary 78
Chapter 6 CEM System Procurement, Installation, and Start-up 80
6.1 Defining the Project Scope 80
6.2 Reviewing the Regulations and the Process 83
6.3 Assessing the Site 83
6.4 Reviewing Monitoring Options 84
6.4.1 Extractive Systems 84
6.4.2 In-situ Systems 84
6.4.3 Parameter Monitoring Systems 89
6.4.4 New Market Products and Systems under Research and Development 91

Contents (continued)

6.5 Evaluating Potential Bidders 91

6.6 Writing the Bid Specifications 93

6.7 Reviewing the Proposals and Making a Decision 94

6.7.1 Areas for Review 95

6.7.2 A Matrix Evaluation Technique 99

6.7.3 Normalizing the Issues 99

6.8 Installing the System 100

6.9 Approving/Certifying the System 101

6.10 Implementing the QA/QC Plan and Operating the System 101

Chapter 7 Certification and Approval Mechanisms for Non-criteria Pollutant Monitoring Systems; Calibration and Demonstration of Performance 104

7.1 Introduction 104

7.2 Instrument Calibration 105

7.2.1 Instrument Function 105

7.2.2 Calibration Materials 106

7.2.3 Direct and System Calibration Procedures 109

7.3 Demonstration of Performance; Certification and Quality Assurance 110

7.3.1 EPA Performance Specifications for Non-criteria Pollutant Monitoring 111

7.3.2 Performance Specification Testing 111

7.3.3 Ongoing Performance Checks and Quality Assurance 116

7.3.4 CEM System Approval Mechanisms in Germany 118

7.3.5 International Standards Organization 120

7.4 Suggested Approval Mechanisms and Approaches for Non-criteria Pollutant and Application Testing 121

7.4.1 EPA Method 301 121

7.4.2 Dynamic Analyte Spiking 122

Appendix A Acronyms 126
Appendix B Glossary 128
Appendix C Bibliography and Additional Reading 133
Appendix D Hazardous Air Pollutants - 1990 CAAA Title III Listing 137
Appendix E Units of the Standard 144
Appendix F Guide for Evaluating CEM System Costs 149
Appendix G Effects of Sample Matrix on Analyte Spike 158

1-1 Continuous Monitoring Methods 3

3-1 Hot/Wet Sampling Systems 30
3-2 In-stack Dilution Probe 30
3-3 Out-of-Stack Dilution System 31
3-4 Close-coupled System 32
3-5 Close-coupled Laser Monitoring System 33
3-6 Double-Pass Transmissometer 33
3-7 Gas Chromatogram 35
3-8 Flame Ionization Detector 36
3-9 Mass Spectrum of Meta-xylene 37
3-10 Linear Quadrupole Mass Analyzer 38
3-11 Total Ion Current Chromatogram 38
3-12 Transmission Spectrum 39
3-13 Differential Optical Absorption Techniques 40
3-14 Ion-mobility Spectrometer 42
3-15 Angular Dependence 47
3-16 Side-scattering Continuous Mass Emission Monitor 48
3-17 Typical Beta Gauge Paper Tape Monitor 48
3-18 Selection Process for Particulate Monitors 50
3-19 Inductively Coupled Plasma Technique 51
3-20 Laser Spark Spectrometry 52

4-1 Uses of Parameter Monitoring in Regulatory Programs 56
4-2 Operational Parameters Correlated to Emissions. 59
4-3 Test Data 62
4-4 Linear Regression of Test Data 62
4-5 Emissions Calculations (PEM system predictions) 67

5-1 Odessa Paperless Stripchart 70
5-2 Typical DAHS System 72
5-3 Example Historical Trend Screen 73
5-4 Example Calibration Cycle Configuration Screen 74

5-5 Competing Demands for Processor Time 76
5-6 Custom CEM System Datalogger 77

6-1 Example Flow Diagram for CEM System Selection and Implementation 81
6-2 Selection Considerations for Extractive Systems 85
6-3 Selection Considerations for In-situ Systems 88
6-4 Considerations for Parameter Monitoring Systems 90
6-5 Alternative Approach to Monitoring System Decision-making 92
6-6 Areas for Proposal Review 95
6-7 Cost Estimation Method for PEM System 97
6-8 Analysis of PEM System Lifetime Cost for Two Example Cases 97
6-9 Simplified Example Matrix Evaluation 99

7-1 Certification and Approval Mechanisms 105
7-2 Instrument Function of Two Analyzers 106
7-3 Generalized Schematic of a Permeation/Diffusion-Based Calibration Gas Generator 107
7-4 Use of Calibration Transfer Standards (CTS) 108
7-5 Direct and System Calibrations 109
7-6 Continuous Particulate Monitoring Calibration Line Specifications 121
7-7 Analyte Spiking 123
