CASWELL/FILE

- Acute Rat Oral (Boric Acid 100%) : LD₅₀ = 3.16 gm/KG
- Acute Rat Oral (Borax 10 Mol) : LD₅₀ = 5.56 gm/KG
- Acute Rat Oral (Borax) : Only summaries available
Male rat LD₅₀ = 6.08 gm/KG
Male rat LD₅₀ = 4.55 gm/KG
Female rat LD₅₀ = 4.98 gm/KG
- Acute Dog Oral (Borax) : LD₅₀ = 6.15 gm/KG only summary available.
- Acute Cavy Oral (Borax) : LD₅₀ = 5.33 gm/KG only summary available.
- Acute Rat Oral (Boric Acid) : LD₅₀ = 3.45 gm/KG only summary available.
- Acute Rat Oral (Boric Acid) : LD₅₀ = 4.08 for female rats. Only summary available.
- Acute Dog Oral (Boric Acid) : LD₅₀ = 3.9 gm/KG only summaries presented.
- Acute Mouse Oral (Boric Acid) : LD₅₀ = 4.1 gm/KG only summary presented.

SUMMARY

The toxicity of this formulation should not create an undue human hazard when usage as per the usage pattern.

P

BORAX

Acute Rat Oral (100%)

Groups of 5 male animals were tested per dosage level of 1.0, 2.15, 4.64, 6.81, and 10 gm/KG. The test material was given a 50% weight/volume suspension in distilled water. The animals were fasted 3 to 4 hours prior to dosing.

Results:

The LD₅₀ equals 3.16 gm/KG. The animals at the dosage levels of 1.0 and 2.15 showed no effects of the treatment. The animals at each of the higher dosage levels exhibited depression and shallow, rapid respiration. Each of the animals at the 4.64 and the surviving animals at the 6.81 gm/KG level showed at the 24 hour observation period depression, diarrhea, and pilo erection. The symptoms persisted until time of death.

Gross autopsies performed upon the animals that died showed markedly erythemic lungs and slightly congested adrenals. The stomachs were distended and contained approximately 2.5 ml of a clear liquid. The livers showed pale areas. Autopsies performed upon the surviving animals at termination of the study revealed no gross pathology.

Acute Rat Oral (Borax 10 Mol)

10 male animals were tested per dosage level and a dosage range of from 4.0 to 7.0 gm/KG. LD₅₀ equals 5.56 gm/KG. At 24 hours the majority of the animals at the 4.5, 5.0 and 5.5 gm/KG exhibited depression, diarrhea, ataxia, lacrimation, ptosis, and deep yellow urine stains. The animals at the higher dosage levels (6.0 to 7.0 gm/KG) exhibited ataxia, diarrhea,

deep yellow urine stains, and ptosis.

Gross autopsies performed on the animals that died revealed congested lungs, congested adrenals, and distension of the stomachs and small intestines. Gross autopsies performed on the surviving animals revealed pale mottled kidneys, pale livers, and slightly congested adrenals.

Reg. No. 1624-OA, 1624-OL
Referral Date - 7/25/69

Dear Mr. Bussey:

The toxicological data received in connection with the Boric Acid formulations in the aforementioned Reg. Nos. has been reviewed.

We do not object to the registration of the products for the proposed usage patterns.

Sincerely,

Robert D. Coberly
Biologist
Division of Pesticide Registration
Office of Product Safety
Bureau of Medicine
