MEMORANDUM

SUBJECT: Registration Standard for Methoxychlor -
Nontarget Insect Studies

FROM: Allen W. Vaughan, Entomologist
Ecological Effects Branch
Hazard Evaluation Division (TS-769-C)

THRU: Henry T. Craven, Head - Section 4
Ecological Effects Branch
Hazard Evaluation Division (TS-769-C)

THRU: James W. Akerman, Chief
Ecological Effects Branch
Hazard Evaluation Division (TS-769-C)

TO: Edward Allen, PMT-12
Insecticide/Rodenticide Branch
Registration Division (TS-767-C)

The Ecological Effects Branch has reviewed the nontarget insect data received under the Registration Standard for methoxychlor. Attached material includes DER, Topical Summary, Disciplinary Review, and Data Table.

Methoxychlor Registration Standard - Nontarget Insects

Effects on Beneficial Insects

The following study received full review under this topic:

<u>Author</u>	<u>ID #</u>
Atkins et al.	00036935

Study is outlined in Table 1.

Table 1. Toxicity study on beneficial insects with ~~2+D~~ ^{METHOXYCHLOR}

<u>Species</u>	<u>Formulation</u>	<u>Results</u>	<u>Author</u>	<u>Date</u>	<u>MRID #</u>
Honey bee (<u>Apis mellifera</u>)	Technical	LD ₅₀ = 23.57 micrograms per bee (relatively nontoxic)	Atkins et al.	1975	00036935

There is sufficient information to characterize methoxychlor as relatively nontoxic to honey bees, when bees are exposed to direct treatment. This study fulfills the guideline requirement for an acute contact toxicity test with honey bees.

Statement for Disciplinary Review

Effects of Methoxychlor on beneficial insects

Methoxychlor was shown to be nontoxic to honey bees in a laboratory acute contact study (Atkins et al. 1975).

Reference (for Disciplinary Review)

TABLE A
GENERIC DATA REQUIREMENTS FOR METHOXYCHLOR

Data Requirement	Composition	Use Pattern	Does EPA Have Data To Satisfy This Requirement? (Yes, No, or Partially).	Bibliographic Citation	Must Additional Data Be Submitted Under FIFRA Section 3(c)(2)(B)?
§158.155 Nontarget Insect					
<u>NONTARGET INSECT TESTING - POLLINATORS:</u>					
141-1 - Honey bee acute contact LD50	TGAI	A,B,G	YES	00036935	NO
141-2 - Honey bee - Toxicity of residues on foliage	TEP	A,B,G	NO		NO ^{1/}
141-4 - Honey bee subacute feeding study	[Reserved] ^{2/}				
141-5 - Field testing for pollinators	TEP	A,B,G	NO		NO ^{1/}
<u>NONTARGET INSECT TESTING - AQUATIC INSECTS</u>					
142-1 - Acute toxicity to aquatic insects	[Reserved] ^{3/}				
142-2 - Aquatic insect life-cycle study	[Reserved] ^{3/}				
142-3 - Simulated or actual field testing for aquatic insects	[Reserved] ^{3/}				
143-1 <u>NONTARGET INSECT</u> thru <u>TESTING-PREDATORS</u> 143-3 <u>AND PARASITES</u>	[Reserved] ^{3/}				

Composition: TGAI = Technical grade of the active ingredient; TEP = Typical end-use product.

The use patterns are coded as follows: A = Terrestrial, Food Crop; B = Terrestrial, Non-Food; C = Aquatic, Food Crop; D = Aquatic, Non-Food; E = Greenhouse, Food Crop; F = Greenhouse, Non-Food; G = Forestry; H = Domestic Outdoor; I = Indoor.

- 1/ As data from the acute contact test indicate low toxicity, no further testing is required.
- 2/ Reserved pending development of test methodology.
- 3/ Reserved pending Agency decision as to whether the data requirement should be established.

1. CHEMICAL: Multiple chemicals. See tables
2. FORMULATION: Technical
3. CITATION: Atkins, E.L., E.A. Greywood, and R.L. Macdonald. 1975. Toxicity of pesticides and other agricultural chemicals to honey bees. Laboratory studies. Univ. of Calif., Div. Agric. Sci. Leaflet 2287. 38pp.
FICHE/MASTER ID 00036935
4. REVIEWER: Allen W. Vaughan
Entomologist
EEB/HED
5. DATE REVIEWED: December 2, 1981
6. TEST TYPE: Toxicity to honey bee
 - A. Test Species: Honey bee (Apis mellifera)
7. REPORTED RESULTS: Methoxychlor (#154) was determined to be relatively nontoxic to honey bees in laboratory acute contact toxicity tests. When test bees were exposed to direct treatment, LD₅₀ was determined to be 23.57 micrograms per bee.
8. REVIEWER'S CONCLUSIONS: This study is scientifically sound, and shows methoxychlor to be relatively nontoxic to honey bees. This study fulfills the guideline requirement for an acute contact toxicity test on honey bees.

Materials and Methods

Test Procedures

A bell-jar vacuum duster is used to apply the pesticide, mixed with a pyrolite dust diluent, to the test bees. Dosages of dust are weighed, bees are aspirated into dusting cages and treated, and bees are then transferred into holding cages. Observations are recorded at 12, 24, 48, 72, and 96 hours.

Statistical Analysis

Analysis of the data was performed to enable the authors to determine LD50 values of pesticides from either dosage-mortality curves or from LC50 values. The slope value was also obtained from the dosage-mortality curve.

Discussion/Results

See tables for LD50 values, slope values, and toxicity categories.

Reviewer's Evaluation

A. Test Procedure

Procedures were sound.

B. Statistical Analysis

Analysis as performed by the authors was assumed to be valid. No validation was performed by EEB.

C. Discussion/Results

This study is scientifically sound.

by the other factors (0.5, 0.75, 1.25 and 1.5) to obtain the proper range of field dosages in pounds per acre. Then, using the slope value closest to the known slope value for the particular pesticide, the anticipated percent mortalities will be valid for that chemical.

We wish to emphasize that there are a few exceptions to the above rule of thumb method--those pesticides which are less hazardous as well as more hazardous than one can anticipate from the laboratory data.

It is our desire that, by presenting this data and these methods, decisions can be made (to select a pesticide, determine the dosage, and apply the chemical in the safest way and at the most appropriate time of day) maximizing the control of pest species while minimizing the adverse effects upon beneficial species in the treated area.

A list of the LD₅₀ and slope values determined at 48 hours after treatment at 80F (26.7C) and 65 percent relative humidity in the laboratory is given for 203 pesticides in table 1. A list of pesticides not toxic in the laboratory at dosages below 11 µg per honey bee is given for 196 pesticides in table 2. Other commonly used pesticide names or name designations appear together in tables 1 and 2. The pesticide names or other designations appearing in table 1 or 2 are arranged in alphabetical order in table 3 preceded with a numerical reference to their position in table 1 or 2 and giving the chemical definition.

*LC50 is the lethal concentration of a chemical giving a bee mortality of 50 percent; LD50 is the lethal dosage in micrograms per bee of a chemical giving 50 percent mortality.

TABLE 1. LD₅₀ and Slope Values Showing the Comparative Toxicity to Honey Bees in the Laboratory at 48 Hours at 80°F (26.7°C) and 65-Percent Relative Humidity.
