6. **STUDY PARAMETERS:**  
Scientific Name of Test Organism: *Selenastrum capricornutum*  
Definitive Test Duration: 72 hours  
Type of Concentrations: Mean measured
7. **CONCLUSIONS:** This study is scientifically sound but does not fulfill the guideline requirements for a Tier 2 aquatic plant study. There was no justification why the study was conducted for only 72 hours (3 days). It appeared that the test was terminated while the algal growth was still in the middle of the exponential phase of the growth curves. The 72-hour EC<sub>50</sub> for *Selenastrum capricornutum* exposed to THPI was >180 ppm and the NOEC was 180 ppm.

**Results Synopsis**

EC<sub>50</sub>: >180 ppm

NOEL: 180 ppm

95% C.I.: N/A

Probit Slope: N/A

**8. ADEQUACY OF THE STUDY**

**A. Classification:** Supplemental.

**B. Rationale:** The test was conducted for only 72 hours.

**C. Repairability:** No.

**9. GUIDELINE DEVIATIONS:**

1. The study was conducted for only 72 hours; the guidelines recommend 120 hours.
2. Initial cell concentration (10,000 cells/ml) was three times higher than recommended (3,000 cells/ml).
