SUMMARY OF INFORMATION REVIEWED AND FINDINGS

- The registrant has submitted this registration as an amendment, although it is a new product registration. The previous registration on this product was canceled in July 1995. No product chemistry data was submitted to support the registration. The source of the active ingredient was not provided. The representative, Ms. Laird, indicated that the site in Mexico will be producing the active ingredient. The Confidential Statement of Formula is unacceptable without product chemistry data (as required by 40 CFR, Part 158 for registration) which includes, but is not limited to, the manufacturing process and analysis of the purity of the active ingredient.
- The request submitted also asked to have a new use added to the product. In the data cited as a similar product (Nissan TCCA Tablets Reg. # 37910-9) the drinking water use was for emergency drinking water. Additional use of the active ingredient as a regular sanitizer for drinking water should be explored.
