Attached please find the environmental fate review of:

Reg./File No.: 352-372

Chemical: Oxamyl

Methyl N',N'-dimethyl-N-[(methylcarbamoyl)oxy]-1-thioxamimidate

Type Product: Insecticide

Product Name: Vydate

Company Name: DuPont

Submission Purpose: Additional Groundwater Data

ZBB Code: other

ACTION CODE: 401

Date In: 11/20/81

EFB # 75

Date Completed: 1/8/82

1.0 INTRODUCTION

Vydate® L is registered for use on potatoes (as well as on other crops) for control of the Golden Nematode, and this use is currently being monitored by the registrant (DuPont) at several locations on Long Island, New York. On September 23, 1981, DuPont forwarded additional details of this ongoing groundwater monitoring program.

2.0 STRUCTURE

[Methyl N',N'-dimethyl-N-[(methylcarbamoyl)oxy]-l-thiooxamimidate]

3.0 DIRECTIONS FOR USE

See previous reviews.

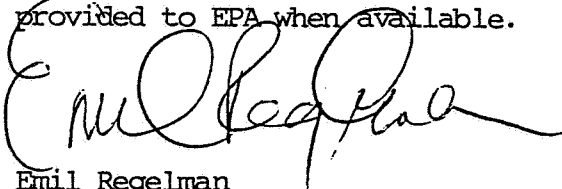

4.0 DISCUSSION

EFB reviewed this groundwater monitoring program on March 2, 1981, and full details are included therein.

In the current submission, no specific monitoring data were provided. The report, a copy of which is appended to this review, summarizes the sites which are currently being monitored as well as the kinds of samples which have been taken for analysis.

5.0 CONCLUSIONS

We assume that the results of this ongoing monitoring will be provided to EPA when available.

Dear Mr. Ellenberger:

VYDATE® L INSECTICIDE/NEMATICIDE
EPA REG. NO. 352-372
USE ON POTATOES FOR NEMATODE CONTROL IN NEW YORK STATE
GROUND WATER AND SOIL RESIDUE STUDIES

As part of our continuing effort to keep EPA informed of our actions on Long Island, New York, I am providing the following update on our monitoring activities:

SOIL SAMPLES - 1981

	<u>'81 Sample Dates</u>			<u>Depth</u>	<u>Date Planted</u>	<u>VYDATE® L In-Furrow Application Rate</u>
	<u>1st</u>	<u>2nd</u>	<u>3rd</u>			
[REDACTED]	5/1	6/24	Fall	0-8'	4/10	3 lb ai/A
[REDACTED]	5/5	6/24	Fall	0-8'	4/10	4 lb ai/A
[REDACTED]	5/6	6/24	Fall	0-4'	4/10	3 lb ai/A

All three locations applied VYDATE® L in-furrow at planting for the control of Golden Nematode in 1980 and 1981. Foliar applications of VYDATE® L were applied to control the Colorado potato beetle during the growing season. [REDACTED] and [REDACTED] locations are on the North Fork and soil samples were taken in 1980 and 1981. [REDACTED] location is on the South Fork. Water samples were taken from [REDACTED] location ([REDACTED] well) in 1980. Ground water at this location is approximately 4 ft. below the soil surface.

A 6" soil auger was used to take the samples. Three soil cores were taken from each location. The cores were started directly above where the VYDATE® L was applied in-furrow. Samples were stored frozen at the Long Island Horticultural Research Farm until they were shipped with dry ice to the Du Pont Experimental Station.

The [redacted] farm is located on [redacted] in Cutchogue, Long Island, NY. The [redacted] farm is on [redacted] in Cutchogue, Long Island, NY. The [redacted] farm is on [redacted] in Bridgehampton, Long Island, NY

WATER SAMPLES - 1981

<u>Location</u>	<u>Dates Sampled</u>		<u>Depth of Well - Ft.</u>
[redacted]	7/24	8/26	65
[redacted]	7/24	8/26	15
[redacted]	7/24	8/26	60
[redacted]	7/24	8/26	25
[redacted]	7/24	8/26	12
[redacted]	7/24	8/26	15

The above locations were sampled in 1980 also, and their situations are described in the Du Pont report, dated December, 1980, describing the ground water analyses and soil residue determinations of oxamyl on Long Island, New York in the 1980 season (EPA Accession number 243989).

WELLS DRILLED BY SUFFOLK CO. HEALTH DEPT.

<u>Location</u>	<u>Dates Sampled</u>		<u>Depth of Well - Ft.</u>
[redacted] Well #1	7/24	8/26	These depths will be available in the final report.
[redacted] Well #2	7/24	8/26	
[redacted] Well #3	7/24	8/26	
[redacted] Well #4	7/24	8/26	

Wells were drilled by Suffolk County Health Department in 1981 on the outside of a 32 acre potato field where VYDATE® L was applied in-furrow in 1980 and 1981, plus foliar applications. Wells No. 1, 2 and 3 are located within 10 ft. of the potato field on the side of the field toward which the ground water flows. Well No. 4 is located where the farmer loads his sprayer with water and pesticides. Because of its location, Well No. 4 has the potential for becoming contaminated with spray solution containing oxamyl.
