

DATA EVALUATION RECORD
§ 71-4 -- AVIAN REPRODUCTION TEST

1. **CHEMICAL:** XDE-105 PC Code No.: 11003

2. **TEST MATERIAL:** Spinosad Purity: 88%

3. **CITATION**

Authors: Beavers, J.B., K. Chafey, L.R. Mitchell
and M. Jaber

Title: XDE-105 Insecticide: A Reproduction Study
With the Northern Bobwhite (*Colinus
virginianus*)

Study Completion Date: 1994

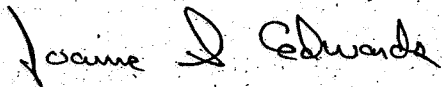

Laboratory: Wildlife International Ltd.

Sponsor: DowElanco

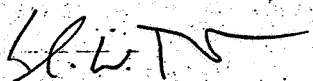

Laboratory Report ID: 103-387

MRID No.: 43414533

4. **REVIEWED BY:** Joanne S. Edwards, Entomologist, EEB, EFED

Signature:  Date: 4/27/96

5. **APPROVED BY:** Leslie Touart, Head of Section 1, EEB, EFED

Signature:  Date: 3/25/96

6. **STUDY PARAMETERS**

Scientific Name of Test Organism: Bobwhite

Age of Test Organisms at Test Initiation: 25 weeks

Definitive Study Duration: 21 weeks

7. **CONCLUSIONS:**

Results Synopsis

Most sensitive endpoints: # eggs laid, live-three week
embryos, normal hatchlings, fourteen day old survivors and
hatchling weight

NOEC: 550 ppm ai

LOEC: 1100 ppm ai

8. **ADEQUACY OF THE STUDY**

A. **Classification:** Core.

B. **Rationale:** N/A

C. **Repairability:** N/A

9. **GUIDELINE DEVIATIONS**

1. None.

10. SUBMISSION PURPOSE:

11. MATERIALS AND METHODS

A. Test Organisms

Guideline Criteria	Reported Information
Species A wild waterfowl species, preferably the mallard (<i>Anas platyrhynchos</i>), or an upland game species, preferably the northern bobwhite (<i>Colinus virginianus</i>)	Northern Bobwhite (<i>Colinus virginianus</i>)
Age at beginning of test Birds should be approaching their first breeding season.	25 weeks old
Supplier All birds should be from the same source.	Top Flight Quail Farm, Belvidere, NJ
Were birds pen-reared?	Yes
Were birds phenotypically indistinguishable from wild birds?	Yes
Health observation period 2 to 6 weeks.	11 week acclimation
Were birds healthy and without excessive mortality prior to the test?	Yes

B. Test System

Guideline Criteria	Reported Information
Were pens for adult birds of adequate size and designed to conform to good husbandry practices?	Yes (30 X 51 cm; sloping floors so ceiling height ranged 21 - 26 cm)
Were pens for chicks of adequate size and designed to conform to good husbandry practices?	Yes (72 X 90 X 23 cm high)

Guideline Criteria	Reported Information
Where pens constructed of a nonbinding material such as galvanized or stainless steel?	Yes- galvanized wire
Was adequate ventilation provided?	Yes
Temperature Approx. 21°C (70°F)	Mean: 16.3 °C SD: 2.7 °C
Relative humidity Approx. 55%	Mean: 38%
Lighting First 8 weeks: 7 h per day. Thereafter: 16-17 h per day. At least 6 footcandles at bird level.	First 7 weeks: 8 h per day. Thereafter: 17 h per day. (367 lux)
Diet A commercial breeder feed (or its equivalent) that is appropriate for the test species.	Feed was formulated to Wildlife International LTD specifications and consisted of 27% protein minimum, 2.5% fat minimum, and 5% fiber maximum
Preparation of test diet	Test diets were prepared by mixing XDE-105 into a premix which was used for weekly preparation of the final diets
Was the premix stored under conditions which maintain stability?	Yes, based on results of analysis of diet samples held 7 days under ambient conditions
Was the diet analyzed to verify homogeneity and stability of the test substance?	Yes
Replenishment of feed	Presented to birds on Monday of each week; additional food was provided when needed.

C. Test Design

Guideline Criteria	Reported Information
<p><u>Nominal concentrations</u> At least two concentrations other than the control are required; three or more are strongly recommended. The highest test concentrations should show a significant effect or be at or above the maximum field residue level.</p>	<p>Nominal concentrations: 550, 1100 and 2200 ppm</p> <p>Max. residue level: unknown (label not available)</p>
<p><u>Control</u> Vehicle control.</p>	<p>Acetone</p>
<p><u>Vehicle</u> Corn oil or other appropriate vehicle.</p>	<p>Corn oil</p>
<p><u>Vehicle amount (% of diet by weight)</u> Not more than 2%.</p>	<p><2%</p>
<p><u>Number of birds per pen</u> One male and 1 female per pen is strongly recommended. For quail, 1 male and 2 females may be acceptable. For ducks, 2 males and 5 females may be acceptable.</p>	<p>1 male and 1 female per pen.</p>
<p><u>Number of pens per group</u> At least 5 replicate pens are required for mallards housed in groups of 7. For other arrangements, at least 12 pens are required, but considerably more may be needed if birds are kept in pairs.</p>	<p>16 pens per group.</p>
<p><u>Pre-laying exposure duration</u> At least 10 weeks prior to the onset of egg-laying.</p>	<p>7 weeks-pre-laying lighting regime- birds began laying eggs during week 13</p>
<p><u>Exposure duration with egg-laying</u> At least 10 weeks.</p>	<p>14 weeks</p>

Guideline Criteria	Reported Information
<u>Withdrawal period</u> If reduced reproduction is evident, a withdrawal period of up to 3 weeks may be added to the test phase.	N/A

D. Egg Collection and Incubation

Guideline Criteria	Reported Information
<u>Were eggs collected daily?</u>	Yes
<u>Egg storage temperature</u> Approximately 16°C (61°F)	12.9 °C
<u>Egg storage humidity</u> Approximately 65%	61%
<u>Were eggs set weekly?</u>	Yes
<u>Were eggs candled for cracks prior to being set for incubation on Day 0?</u>	Yes
<u>Candling for fertility</u> Quail: approx. Day 11 Ducks: approx. Day 14	Eggs were candled on Day 11.
<u>Incubator Temperature and Humidity</u>	37.5 °C 56% relative humidity
<u>Transfer of eggs to hatcher</u> Bobwhite: Day 21 Mallard: Day 23	Eggs were transferred on Day 21.
<u>Hatching temperature</u> 39°C (102°F) is recommended	37.2 °C
<u>Hatching humidity</u> 70% is recommended	76 %
<u>Day after egg set that chicks were removed and counted</u> Bobwhite: Day 24 Mallard: Day 27	Chicks were removed and counted on Day 25 or 26.

5

E. Eggshell Thickness Measurement

Guideline Criteria	Reported Information
Collection Schedule At least once every two weeks (Week 1, 3, 5, 7 and 9).	At weekly intervals
Were shells opened, washed, and air dry for at least 48 hours before measuring?	Yes
Measurement 3-4 measurements per eggs to the nearest 0.01 mm.	5 points to the nearest 0.005

12. REPORTED RESULTS

Guideline Criteria	Reported Information
Quality assurance and GLP compliance statements were included in the report?	Yes
Did diet analysis verify the concentrations of test material?	Yes
Did diet analysis show that the test substance was stable and homogeneous?	Yes
Were body weights of adults reported for test initiation and biweekly up to week 8 or the onset of egg laying?	Yes
Was average food consumption of adults reported at least biweekly?	Yes

Guideline Criteria	Reported Information
<p>Reproductive Endpoints The following endpoints should be reported:</p> <ul style="list-style-type: none"> • Eggs laid • Eggs cracked • Eggs set • Viable embryos • Live 3-week embryos • Normal hatchlings • 14-day-old survivors • Weights of 14-day-old survivors • Egg shell thickness • Total food consumption • Initial and final body weights, by sex 	<p>All listed endpoints were measured. However, total food consumption per pen was not provided, rather:</p> <ul style="list-style-type: none"> o by pen for each week, average gram/bird/day o mean consumption per treatment level per week (grams/bird/day)
<p>Were data reported by pen for all endpoints?</p>	<p>Yes, except as noted above</p>

Significant Results:

Mortality/Gross Necropsy:

Mortalities: Two incidental mortalities occurred in both the control and 550 ppm treatment levels. One treatment related mortality occurred in the 1100 ppm treatment level and two incidental and six treatment related mortalities occurred in the 22000 ppm treatment level.

Gross Necropsy: At the 1100 ppm treatment level one hen was noted with a flaccid gizzard and four hens were noted with a distended ceca. These were considered to be treatment related effects. At the 2200 ppm treatment level effects were noted on reproductive condition (regressed ovaries and testes) and the gastro-intestinal tract (distended and flaccid gizzards), and were considered treatment related.

Adult Body Weight:

There were no treatment related effects on adult body weight in the 550 or 1100 ppm treatment groups. At the 2200 treatment level there was a treatment related reduction in body weight gain among both drakes and hens throughout the study. Male body weight was statistically significant ($p < 0.05$) from the control group for the week 2, 6, 8, and terminal body weight intervals. Hen body weight was statistically significant ($p < 0.05$) from the control group for the week 6, 8, and terminal body weight intervals.

Food Consumption:

Feed consumption was variable among pens due to excessive wastage. However, no treatment related effects were noted at any concentration level.

Eggshell Thickness:

No statistically significant effects were noted.

Offspring Body Weights:

At the 1100 ppm treatment level there was a slight, but statistically significant ($p < 0.05$) reduction in body weights of hatchlings, that was considered to be treatment related. At the 2200 ppm treatment level there reductions in body weight of both hatchlings and # of 14-day survivors that were statistically significant ($p < .05$).

Reproductive Results:

No apparent treatment related effects were noted at the lowest treatment level.

At the 1100 ppm treatment level there was a slight reduction in egg production that was not statistically significant. Also, there appeared to be a slight reduction in the survival of offspring to 14 days of age.

Statistically significant effects on reproductive performance were noted at the highest treatment level for the parameters: egg production, offspring survival, hatchlings as a percentage of both the maximum # of eggs set, and 14-day old survivors as percentages of both the number of eggs set and the maximum number set.

13. VERIFIED STATISTICAL RESULTS

EPA's Birdall Program was used to verify the laboratory findings.

Means of Endpoints

Endpoint	Control	550 ppm	1100 ppm	2200 ppm
Eggs laid (EL)	41.79	39.21	33.47	8.25*
Eggs cracked (EC)	0.86	0.57	1.07	0.13
Eggs set (ES)	35.79	34.29	27.93	5.87*
Viable embryos (VE)	31.21	30.29	23.33	5.00*
Live 3-wk embryos (LE)	30.64	30.07	22.27*	5.00*

Endpoint	Control	550 ppm	1100 ppm	2200 ppm
Normal hatchlings (NH)	28.86	27.43	20.73*	3.62*
14-day-old survivors (HS)	26.00	23.64	18.13*	2.25*
Egg shell thickness (THICK)	0.22	0.23	0.22	0.22
Hatchling weight (HATWT)	6.14	6.00	5.53*	5.33*
14-day-old survivor weight (SURVWT)	23.43	22.79	22.14	18.60*
Food consumption (FOOD) ¹	524	538	538	403*
Final weight of males (POSTM)	217	223	212	193*
Final weight of females (POSTF)	234	239	226	193*

¹ For each pen, weekly values reported (grams/bird/day) were totaled.

* Dunnett's test

Similar statistical findings were noted, except for the following:

- o Wildlife International reported slight reductions in egg production, 14 day survivors and hatchling body weight at the 1100 ppm treatment level, which were not statistically significant. Applying Dunnett's test we found statistically significant ($p < 0.05$) reductions in live three week embryos, normal hatchlings, 14 day survivors and hatchling body weight. We also noted a reduction in egg production at the 1100 treatment level, which can be considered to be biologically significant.

- o Wildlife International reported that feed consumption was variable among pens and no treatment related effects were noted at any concentration level. Applying Dunnett's test we found a statistically significant ($p < 0.05$) reduction in food consumption at the highest test concentration.

14. REVIEWER'S COMMENTS

The reviewer's findings were in general agreement with Wildlife International. There were no deviations noted with the following exception:

- o in the study room, the average temperature (16.3 °C) was lower than the recommended temperature (21 °C) and the relative humidity (38%) was lower than the recommended humidity (55%).

The NOEC for bobwhite exposed to spinosad in the diet for 21 weeks is 550 ppm based upon the following findings:

- o at the 550 ppm treatment level: no apparent chronic or reproductive effects noted.

- o at the 1100 ppm treatment level: a statistically significant reduction in live-three week embryos, normal hatchlings, fourteen day old survivors and hatchling weight and a reduction in eggs laid (viewed as biologically significant; one mortality and associated necropsy findings similar to the 2200 ppm treatment group.

- o at the 2200 ppm treatment level: a statistically significant reduction in eggs laid, viable embryos, live-three week embryos, normal hatchlings, 14 day old survivors, hatchling weight, 14 day survivor weight and adult terminal body weight; 6 adult mortalities; effects on reproduction condition (regressed ovaries/testes) and-gastro-intestinal tract (distended and flaccid livers)

EFFECTS OF SPINOSAD ON THE REPRODUCTION OF BOBWHITES

20. ANALYSIS OF FOOD CONSUMPTION

 11:45 Wednesday, December 13, 1995

General Linear Models Procedure

Dunnnett's One-tailed T tests for variable: FOOD
 NOTE: This tests controls the type I experimentwise error for comparisons of all treatments against a control.

Alpha= 0.05 Confidence= 0.95 df= 60 MSB= 12623.02
 Critical Value of Dunnnett's T= 2.104
 Minimum Significant Difference= 83.573

Comparisons significant at the 0.05 level are indicated by '****'.

LEVEL	Comparison	Simultaneous Lower Confidence Limit	Difference Between Means	Simultaneous Upper Confidence Limit
