

Subject Delayed Neurotoxicity study for Larmin  
500 Thiocarb (1016-EUP-LE, 9G-2152,  
accession no. 099 223)

From W. Thomas Edwards (TS 769)

To William Dykstra (TS 769)

The report submitted by Food and Drug Research Laboratories, Inc. to Union Carbide Agricultural Products Company, Inc. on the substance identified as UC 51762 #40-488 did not indicate potential for delayed neurotoxicity.

In my opinion, the only effects on the nervous system indicated were of a more transient acute nature.
