😘 POISON SIGNS (Symptoms)

Parathion is a very dangerous poison. It rapidly enters the hody on contact with all skip surfaces and eyes. Clothing wet with this material must be removed immediately. Exposed persons must receive prompt medical treatment or they may the

Some of the right and symptoms of poisoning are. Headache, nausea -vomiting cramps weakness hurred viscos pin point pupils tightness on chest labored breathing nervousness sweating watering of eyes -drooting or frathing of mouth and nose, muscle spasms and coma-

FIRST AID TREATMENT

Call a doctor (physician), clinic or bospital immediately. Explain that the victim has been exposed to parathion and describe his condition If breathing has stopped, start artificial respiration immediately and

maintain until doctor sees victim. If swallowed and on time a wake from coose in ske him sometom kla Induce vomiting by sticking finger down throat or by giving soapy or strong salty water to drink. Repeat until vomit is clear. Never give any thing by mouth to an unconscious person. Have victim lie down and keep quiet. See doctor immediately.

In case of contact, immediately flush eyes or skin with plenty of water for at least 15 minutes while removing contaminated clothing and shoes. See doctor immediately.

NOTE TO PHYSICIANS

Emergency Information - Call (415) 233-3737. Antidote - administer atropine sulfate in large doses. TWO to FOUR mg. intravenously or intramuscularly as soon as cyanosis is overcome. Repeat at 5 to 10 minute. intervals until signs of atropinization appear. 2 PAM chloride is also antidotal and may be administered in conjunction with atropine. DO NOT GIVE MORPHINE OR TRANQUILIZERS. Parathion is a strong cholinesterase inhibitor affecting the central and peripheral nervous sys tems and producing cardiac and respiratory depression. At first sign of pulmonary edema, the patient should be given supplemental oxygen and treated symptomatically. Continued absorption of the poison may occur and fatal relapses have been reported after initial improvement, VERY CLOSE SUPERVISION OF THE PATIENT IS INDICATED FOR AT LEAST 48 HOURS

POST TREATED AREA
