DIRECTIONS

CORN (Field) Popcorn Sweet)—For Control of Corn Rootworm Larvae, ROW TREATMENT—Use 3 to 4 pints of BUX 2 Emulsive in 10 gallons of spray mix per 13,080 linear feet of row. This is equivalent to one acre of corn on a 40-inch row spacing. To apply either the 3 or 4 pint rate of BUX 2 Emulsive regardless of row spacing, one pint of the desired spray mix should be delivered per 164 feet of row at normal planting speed. Apply the spray mix at the time of planting in a 7 to 10-inch band to the soil surface over the covered seed row. Incorporate the spray mix into the top ½ to 1 inch of soil using press wheels, covering disks, or trailing chains. **DOUBLE BAND (SPLIT BOOT) TREATMENT**—

**DO NOT TAKE INTERNALLY
DO NOT INHALE
DO NOT GET ON SKIN
KEEP OUT OF REACH OF CHILDREN**

WARNING: Harmful if swallowed. Do not get on skin or in eyes. Do not inhale vapor. Wash skin thoroughly with soap and water. For eyes flush with water, get medical attention. Wash thoroughly after using. Launder contaminated clothing before re-use. Do not store or transport near food or feed. **DO NOT USE, POUR, SPILL OR STORE NEAR HEAT OR OPEN FLAME.**

Note to Physicians. Atropine is Antidotal.

This product is poisonous to fish and wildlife. Keep out of lakes, ponds, and streams. Do not apply where runoff is likely to occur. Do not apply when weather conditions favor drift from areas treated. Do not contaminate water by cleaning of equipment or disposal of wastes. Do not apply in any manner not specified on the label.

Apply the row treatment rate per acre in combination with the required amount of liquid fertilizer in a band 1 to 2 inches to each side of the seed, 1 to 2 inches deep and 1 inch wide. Do not allow BUX 2 Emulsive to contact the seed as this may result in germination damage. Do not apply BUX 2 Emulsive to only one side of the seed as this may result in poor control. **BROADCAST TREATMENT**—Use 1 to 2 gallons of BUX 2 Emulsive per acre in 15 to 20 gallons of spray mix with ground equipment. Apply as a uniform broadcast treatment prior to or at the time of planting. Incorporate into the top one-half to one inch of soil using a harrow or disk.

CORN (Field)—For Tank Mixing With Atrazine 80W: Use 6 pints of BUX 2 Emulsive in 10 to 20 gals of spray mix per acre of planting area. Treat entire area 14 to 20 days before the seed is planted. Incorporate seed rows into the sprayed area using press wheels, covering disks, or trailing chains. **ATRAZINE, 80W (Atrazine)**—Use 6 pints of BUX 2 Emulsive in 10 to 20 gals of spray mix per acre. Incorporate into the top ½ to 1 inch of soil using press wheels, covering disks, or trailing chains. Follow all directions for mixing, applying, and rinsing tank and equipment after mixing and applying atrazine to the field.

CONDITIONS OF SALE: 1. Chevron Chemical Company (Chevron) warrants that this material conforms to the chemical description on the label and is reasonably fit for use as directed hereon. Chevron neither makes, nor authorizes any agent or representative to make, any other warranty of FITNESS or of MERCHANTABILITY, guarantee or representation, express or implied, concerning this material.

2. Critical and unforeseeable factors beyond the reasonable control prevent it from eliminating all risks in connection with the use of chemicals. Such risks include, but are not limited to, damage to plants and crops to which the material is applied, lack of complete control, and damage caused by drift to other plants or crops. Such risks occur even though the product is reasonably fit for the uses stated herein and even though label directions are followed. Buyer and user acknowledge and assume all risks and liability, except those assumed by Chevron under 1 above, resulting from the use of this material.
