ORTHO Mole Cricket Bait Formula II is a ready-to-use product that controls Mole Crickets in home lawn and turf areas.

DIRECTIONS

Mole Cricket Control: Mole Crickets are soil inhabiting insects that damage lawns by feeding on grass roots and by forming mole like tunnels that loosen the soil causing the grass to dry out. The adults grow to 1½ inches long, are brownish and have flattened front legs well adapted for tunneling. Feeding and tunneling occurs primarily at night. The meandering tunnels are easily seen in short or newly planted lawns. Heavily infested lawns gradually turn brown and die.

How To Apply: For best results the lawn should be mowed and watered thoroughly before application. Apply ORTHO Mole Cricket Bait Formula II at the rate of 1 lb. to cover 2,000 sq. ft. For fast easy application use an ORTHO WHIRLYBIRD Spreader. Using setting No. 1, apply one WHIRLYBIRD full (1½ lbs.) to 1,500 sq. ft. Apply at dusk when overnight rains are not expected. If rain should occur within 36 hours after treatment, the lawn should be retreated.
