Do not get in the spray zone. Do not get in the spray zone. Do not get in the spray zone.

Handwritten notes and date: 1961

In case of an emergency endangering life or property involving this product, call collect, day or night, Area Code 201 - 835-3100.

Antidote: Atropine is an antidote. Consult your physician about obtaining a supply of 1/100 grain (0.6 milligram) tablets for emergency use. If symptoms include blurred vision, stomach cramps or tightness in chest, don't wait for a physician but take two tablets at once. Do not take atropine unless symptoms of poisoning have occurred. Anyone who has been sick enough to have taken atropine must be seen by a physician as soon as possible.

FIRST AID

If swallowed, induce vomiting by sticking finger down throat or by giving soapy or strong salty water to drink. Repeat until vomit is clear. Never give anything by mouth to an unconscious person. If inhaled, remove to fresh air. If not breathing, give artificial respiration, preferably mouth to mouth. If breathing is difficult, give oxygen. In case of contact, immediately flush eyes or skin with plenty of water for at least 15 minutes while removing contaminated clothing and shoes. Wash clothing before re-use.

CALL A PHYSICIAN AT ONCE IN ALL CASES OF SUSPECTED POISONING.

NOTE TO PHYSICIANS: Warning symptoms include weakness, headache, tightness of chest, blurred vision, nonreactive pinpoint pupils, salivation, sweating, nausea, vomiting, diarrhea and abdominal cramps. Give atropine intramuscularly or intravenously, depending on severity of poisoning, 2 to 4 milligrams (3 to 6 tablets, 1/100 grain each) every 15 minutes until fully atropinized as shown by dilated pupils, dry flushed skin and tachycardia. Twenty to thirty milligrams or more may be required during the first 24 hours. Never give opiates or phenothiazine tranquilizers. Clear chest by postural drainage. Artificial respiration or oxygen administration may be necessary. Observe patient continuously for at least 48 hours. Allow no further exposure to any cholinesterase inhibitor until cholinesterase regeneration has taken place as determined by blood tests. Pralidoxime chloride (2-PAM; PROTOPAM chloride) may be effective as an adjunct to atropine. Use according to label directions.

DIRECTIONS FOR USE

Do not use this product to any use other than those specified on this label. THIMEI is an effective soil and systemic insecticide for early season insect control which has been combined with fertilizer for efficient and uniform application. Application should be made at planting time. Application at rates higher than those shown on label may result in illegal over-residue.

WHEAT: For control of grasshoppers, aphids and Hessian fly, apply at the rate of 100 lbs. (1.0 lb. actual phosphate) per acre in the seed furrow at planting time. Do not feed or graze foliage within 45 days of treatment. For aphid and grasshopper control, use only in the western and north central states.
