

As a deodorant — remove transparent paper and then hang on wall. Odorex Moth Cakes kill moths, eggs and larvae where one moth cake is used for each twelve cubic feet of tightly enclosed space.

Hang this moth cake on wall near ceiling or place on top shelf, as the vapor given off is heavier than air and travels downward. This vapor cannot injure or stain materials. Replace with a new Odorex Moth Cake before old one has entirely evaporated.

Made of highly volatile base of aromatic odor. It transforms into a vapor heavier than air, the speed of volatilization increasing with the temperature. For storing woolsens, garments, etc., use Odorex Moth Crystals available in 1 lb. sprinkler cans.
