

SUPER 6 CONCENTRATE

# BRUSH-O-CIDE

## BRUSH KILLER

Low volatile emulsifiable concentrate for controlling mixed stands of woody brush.

READ WARNING NOTICE BEFORE BUYING OR USING  
IF NOTICE TERMS ARE NOT ACCEPTABLE, RETURN AT ONCE UNOPENED

Keep out of reach of children.

**CAUTION:** MAY CAUSE SKIN IRRITATION.

Avoid contact with eyes, skin, or clothing  
Do not store near food, fertilizer, seeds, insecticides, or fungicides  
Do not contaminate water used for irrigation, domestic or spray purposes  
In case of fire, use water spray, foam, dry chemical or CO<sub>2</sub>  
Harmful if swallowed.

**ACTIVE INGREDIENTS:**

\*Isooctyl ester of  
2,4-Dichlorophenoxyacetic acid 46.6%

\*Isooctyl ester of  
2,4,5-Trichlorophenoxyacetic acid 44.5%

**INERT INGREDIENTS:** 8.9%

100.0%

\*Equivalent to 30.9% 2,4-D acid or 3.0 pounds per gallon, and 30.9% 2,4,5-T acid or 3.0 pounds per gallon.

NET CONTENTS 1 U.S. GALLON

### DIRECTIONS FOR USE

Because of variations in climate and soil conditions, the various effects of this product may vary. Consult your state or local agricultural extension office for advice on type of application and timing. You may wish to follow their recommendations which may vary somewhat from those given here.

**WARNING—BE CAREFUL WHEN YOU SPRAY.** Never apply BRUSH-O-CIDE except as recommended or in any other way, may result in damage or injury to persons, animals, or crops, or other undesirable consequences. Crops such as tomatoes, cotton, vegetables, grapes, fruit trees, soybeans, peas, tobacco, or beans, and flowers or ornamentals are very susceptible to 2,4-D and 2,4,5-T herbicides, and should never be treated with BRUSH-O-CIDE. Do not allow the spray mist to drift into desirable crops or plants—even minute quantities of the spray may cause severe injury. Use low pressures to form coarse sprays that are less likely to drift. Do not spray on windy days. Although BRUSH-O-CIDE is formulated with low volatile esters of 2,4-Dichlorophenoxyacetic acid and 2,4,5-Trichlorophenoxyacetic acid, it may still release vapors after application that might injure sensitive plants nearby. Do not use BRUSH-O-CIDE in greenhouses.

Do not use around the home or recreation areas.

Use of this herbicide may be governed by local regulations.

Large amounts of BRUSH-O-CIDE in the soil may temporarily inhibit seed germination.

Keep this container closed when not in use and do not reuse for other purposes.

Do not use in any manner other than recommended in the label to avoid possible crop injury or residues at harvest.

It is best to use a separate sprayer for applying 2,4-D and 2,4,5-T herbicides. If you must use the same equipment for oil or spraying, thoroughly flush your entire spray unit with water immediately after use. Then fill the sprayer with water containing household ammonia (one quart to each 25 gallons of water) and let it stand for one day. Finally, flush equipment thoroughly, including hoses, and nozzles, several times with water.

**CAUTION:** Do not use until you have read the "WARNING" on this item.

**FOLIAGE SPRAY:** To spray with ground equipment, use 2½ quarts with 1½ gallons of water. Add water to the spray tank, and mix thoroughly. For small areas, use 1½ to 2 quarts per gallon of water. Spray thoroughly wet all leaves and stems. Re-spray necessary and a second application should be made the following season. For large trees, use a basal or stump spray as described below.

This product may be applied at 2½ quarts per acre by plane to control weeds in brush and succulent brush or range-land. Mix 2½ quarts of BRUSH-O-CIDE in 1 gallon of oil and spray evenly over the area. Consult your state agricultural experiment station or extension service weed specialist for the best time and rate of treatment which has been most successful in your area. Do not graze treated areas by dairy animals within 30 days after treatment.

**BASAL SPRAY:** This is more effective than a foliage spray on such large trees as red maple and spruce such as maple, oak, elm, or ash. Mix 5 to 6 pints of BRUSH-O-CIDE with 25 gallons of kerosene or gasoline. For small areas, use ½ pint per gallon of oil. Soak the trunk and limbs from the ground to a height of 3 feet including any exposed roots. During the dormant season, use 6 quarts of BRUSH-O-CIDE mixed with 10 to 20 gallons of oil. For best results, allow the treated brush to stand for a month or more before cutting.

**STUMP SPRAY:** For most species, mix 6 quarts with 10 gallons of kerosene or gasoline. For small areas, use 12 tablespoons per gallon of oil. Thoroughly soak top and sides of stump and any exposed roots. For more resistant species, such as oak, elm, maple or ash, use 12 quarts of BRUSH-O-CIDE with 10 gallons of oil.

### WARNING NOTICE

Monsanto Company warrants that this material conforms to the description on the label and is reasonably fit for the purposes referred to in the directions for use. This warranty is limited to the understanding that the buyer assumes all risks of use or handling when he purchases this product, and that he is in the control of the other factors, such as for example, mixing, application, timing, and other factors, such as application, or the presence of other products or materials, in or on the soil, which may affect the results. No other express or implied warranty of fitness or merchantability. The extent of the liability of Monsanto Company or any other seller for any injury or damage resulting from the use or handling of this product shall be the purchase price paid by the buyer for the quantity of this product involved. The buyer and all users are deemed to have accepted this warranty when they purchase and not be valid by any verbal or written agreement.
