When to use

(SEE COMPLETE DIRECTIONS ON BOX AND NET BELOW)

Make treatment prior to or at the first suspicion of disease activity. Apply to moist lawn foliage, preferably in early morning or evening.

Repeat at 10-14 day intervals during period of disease activity. In extreme cases, use at 7 day intervals.

If rain washes granules off grass before 24 hours, effectiveness is greatly reduced and that particular application should be made again at once.

Gray snowmold—Apply prior to first heavy snow (early winter). Repeat in midwinter if lawn is free of snow. A final treatment in late winter as last of snow melts, extends the protection. Applications can be to dry or moist grass.

Use a Scott's Spreader (Standard or Automatic) at setting 6 1/2 to ensure proper distribution
