TWIN LIGHT Methoxychlor 5% Granular in the Midwest or
Northeast is recommended for use as a mosquito larvicide,
applied as a spring tan winter treatment for control of
"spring brood" mosquito larvae and as a surface treatment
to water breeding sites when larvae are present during
the spring and summer.

DIRECTIONS

Apply the following amount by airblast or with a drama-
tique spread spreader and contact areas for several days
without water. Apply until water covers breeding
sites.

Each acre-foot requires application during winter one
early autumn treatment of 100 lbs./acre.
per acre(0.5 to 1 lb. actual methoxychlor).

To control Larvicide-make one or more applications to the

SEACOAST LABORATORIES, INC.

TWIN LIGHT Methoxychlor 5% Granular in the Midwest and Northeast is recommended for use as a mosquito larvicide, applied as a prehatch winter treatment for control of "spring brood" mosquito larvae and as a surface treatment to water breeding sites when larvae are present during the spring and summer.

DIRECTIONS

Apply at the following rates by aircraft or with a crank-operated spreader similar to that used for spreading seed and fertilizer. Apply only to known mosquito breeding sites.

Prehatch-make a single application during winter and early spring at the rate of 10 to 20 lbs. per acre(0.5 to 1 lb. actual methoxychlor).

Larvicide-make one or more applications to the source as needed for succeeding broods during the spring and summer. Apply at the rate of 3.5 to 10 lbs. per acre(0.13 to 0.5 lb. actual methoxychlor).
