

## **WOOD - TREATING INSTRUCTIONS**

Use NEVAROT to protect and preserve wood wherever it is subject to attack by rot, fungi, mildew or termites. Several methods of application are recommended, all designed to get NEVAROT into wood pores. The more you get into wood, the more the protection.

**COLD SOAK TREATMENT** — Best for new construction wood. Using seasoned wood that is trimmed and cut, soak in NEVAROT a minimum of 4 hours on wood which is to be in contact with the ground and at least 5 minutes per inch of thickness on wood which is to be used above ground. Any metal vessel of suitable size for the wood to be treated may be used for the soaking. The pieces of wood must be so placed in the soaking vessel to allow penetration of NEVAROT on all surfaces of the wood.

**BRUSH OR SPRAY GUN TREATMENT** — Best for application to wood already in use. Remove any paint or other surface sealer present from the wood using appropriate stripper or cleaner. Apply NEVAROT with either large brush or spray gun at rate of 100 to 250 square feet per gallon. At least two coats of NEVAROT should be applied, allowing time to dry between coats. This type of treatment would not provide satisfactory termite control for material already in place.

**READ CAUTION STATEMENT BEFORE USING.**

### **NOTICE!**

**VEGETATION:** NEVAROT is a toxic solution and may damage desirable plants if applied in their immediate vicinity.

**NOT RECOMMENDED FOR GREEN HOUSES.**
