DIRECTIONS:

Adjust pool water pH to 7.2 to 7.6
AT BEGINNING OF SEASON use 3 lbs. of Barcolene's Pool Conditioner per 10,000 gallons of water. No more necessary unless pool is emptied and refilled.

For initial treatment only, use 2 GIANT Pool Pills per 10,000 gallons of water.

DURING SEASON 1 tablet will normally provide 0.6 to 1.0 ppm available chlorine per 8,000 gallons of water under normal conditions, as follows:

Water Temp. (F)	No. of days
65 to 70	12 to 14
75 to 80	9 to 10
85 to 90	7 to 8

Since each pool is different, tablet dissolution is affected by water temperature and water flow rate over the tablet so that the above dosage may vary from pool to pool. Chlorine levels should be checked at least once a day to maintain 0.6 to 1.0 ppm residual chlorine as determined by a suitable chlorine test kit. This is particularly important at the beginning of the season until a pattern has been established.

If the chlorine level is below 0.6 add 1 or more GIANT Pool Pills. If the chlorine reading is above 1.0, the number of tablets used at a given time can be reduced.

Dosages listed are for normal pool use. Heavy bather load or extremely hot weather may require increased dosages to maintain recommended chlorine level.

To avoid spotting of painted surfaces, dissolve tablet through skimmer.
