ALGAEICIDE

AN ANTI-ALGAE SPECIFIC

Use one gallon of BERKITE 13 for each one million gallons — or — one-third gallon per acre foot of water. Retreat every four weeks or sooner when re-growth of bloom-producing blue-green algae is apparent.

CONTAINER DISPOSAL — Destroy at safe disposal site or bury 18 inches below soil surface. Never re-use for food or water.

TO CONTROL ALGAE IN SWIMMING POOLS

BERKITE 4 IS RECOMMENDED.

AN ANTI-ALGAE SPECIFIC

DIRECTIONS FOR USE

Apply on a clear, preferably sunny, day when the water temperature is 55° or higher. Making a working suspension by diluting with sufficient water so proper dosage of BERKITE 13 will be applied over the entire surface area.

SHAKE CONTENTS THOROUGHLY and add to the suspension any solids remaining in container. Spray solution over the water surface using a mechanized spray with fine nozzle and spray tank equipped with an agitator to keep the chemical in suspension.

Toxic to fish. Avoid use in shallow farm ponds which contain desirable fish, where a heavy growth of algae is present treat only about one-third of the pond at a time to allow the fish to move to an area more favorable for oxygen supply.

Allow two hours to elapse before swimming to permit proper chemical action on surface and lower water areas.

CAUTION: Avoid contact of liquid with eyes, skin or clothing. Use with adequate ventilation. Wear protective clothing. Wash hands and face thoroughly with soap and water after use and before eating or smoking. Keep away from feed and food products.
