TEXAS PERMIT NO. 84

ACCEPTED WITH COMMENTS

CAUTION: Do not feed to lactating dairy animals. Occasional sensitivity to Phenothiazine has been reported in cattle. Keep out of reach of children.

—FEEDING DIRECTIONS—

To be fed Free-Access to cattle and sheep on range pasture. Consumption should be 1/24 pound per 100 pounds of body weight for cattle. For sheep feed at a rate of 1/6 pound (2 1/2 ounces) per head per day. Supply adequate roughage and water at all times. Place in troughs relatively close to water or near the loafing areas. SHAWNEE'S THREE-in-ONE Pasture Supplement furnishes all necessary Mineral Elements, Salt, Protein and other Vitamins to meet requirements of Beef Cattle on Summer range pastures and should be fed as the sole source of salt.

SHAWNEE'S THREE-in-ONE-brand Pasture Supplement contains an active drug ingredient which has been biologically tested against the horn fly, and guaranteed by the manufacturer to prevent the breeding of an average of 80% or more of the horn flies in the

CAUTION: Do not feed to lactating dairy animals. Occasional sensitivity to Phenothiazine has been reported in cattle. Keep out of reach of children.

—FEEDING DIRECTIONS—

To be fed Free-Access to cattle and sheep on range pasture. Consumption should be 1/24 pound per 100 pounds of body weight for cattle. For sheep feed at a rate of 1/6 pound (2 2/3 ounces) per head per day. Supply adequate roughage and water at all times. Place in troughs relatively close to water or near the loafing areas. SHAWNEE'S THREE-in-ONE Pasture Supplement furnishes all necessary Mineral Elements, Salt, Protein and other Vitamins to meet requirements of Beef Cattle on Summer range pastures and should be fed as the sole source of salt.

SHAWNEE'S THREE-in-ONE brand Pasture Supplement contains an active drug ingredient which has been biologically tested against the horn fly, and guaranteed by the manufacturer to prevent the breeding of an average of 90% or more of the horn flies in the manure of treated cattle, when used as directed.

For maximum protection against horn flies, cattle should be sprayed at the start of the fly season, and fed SHAWNEE'S THREE-in-ONE brand Pasture Supplement (Medicated) continuously beginning several weeks before the fly season until all adult horn flies have disappeared in the fall. SHAWNEE'S THREE-in-ONE brand Pasture Supplement (Medicated) prevents the breeding of horn flies and face flies in the manure of treated cattle, but does not affect any existing adult flies. For internal parasite control this product should be fed on a year round basis to cattle. Since face flies migrate from farm to farm it is essential that the larvicide programs be carried out on an area basis to assist in the reduction of the adult face fly population.
