INGREDIENT STATEMENT

New Purge Concentrated Aerosol Insect Killer contains a highly effective insecticide formulation specially designed for use in automatic mist dispensing units around Restaurants, Stores, Dairies, Barns, Motels, Hotels, Hospitals, Food Processing Establishments and other areas where flies, gnats, flying moths, mosquitoes are an annoyance.

ACTIVE INGREDIENTS:

DIRECTIONS

When properly installed — one automatic mist dispensing unit containing a can of Purge Concentrated Aerosol Insect Killer is usually sufficient to treat 3,000 cubic feet of air space. The automatic sprayer will release 50 mg. of concentrated material every 15 minutes. Its effectiveness on flying insects will usually be noticeable within one hour after the machine has been activated. Two hours of continuous operation will generally suspend enough insecticide in the air to reduce the number of flying insects present on the premises. Maximum insect control is maintained when the automatic mist dispensing unit is allowed to run continuously for 24 hours per day. If less than 24 hours of operation per day is desired — the machine should then be set to start at least one hour before effective insect control is required and allowed to run continuously until control is no longer required.

Establishments
3000 -
50 -

FOR USE IN AUTOMATED: The Automizer unit should be installed for each 3,000 cubic feet of space to be treated. The Automizer activates PURGE'S mist valve once every 15 minutes; after two hours of operation, enough PURGE is suspended in the air to kill a substantial proportion of the flies, mosquitoes and gnats present.

Usually the effectiveness of PURGE will be noticeable within one hour after the Automizer is activated. If less than 24 hours control is required, the Automizer should be set to start one hour before control is desired and run one hour after control is no longer needed.

Keep in mind that such factors as air flow rate, size of space treated, humidity and room temperature all affect insect activity and control. Therefore, one unit per 3,000 cubic feet should be considered as an average need with adjustments made depending on specific conditions at place of usage. As with any method of insect control, best results are achieved when sanitation and other positive insect-prevention practices are followed.

This 12-oz. can of PURGE II contains approximately 2,000 mg. of active ingredient to sustain operation for a total of 600 hours or 25 days.

on a 24-hour basis. It is suggested that the container be changed once every 2 months.

CAUTION:
Large drafts of forced ventilation may reduce or eliminate the insecticidal efficacy of these installations. Use the product as a space spray in food processing plants only when plant is not in operation. Foods should be removed or covered during treatment. All food processing surfaces should be covered or thoroughly cleaned before using.

DIRECTIONS

TO KILL HOUSE PESTS:

FLYING INSECTS: Flies, Mosquitoes, Gnats, Wasps, Flying Moths. With PURGE, there is no need to spray directly at flying insects. Close doors and windows. Spray 12-15 shots for average room (1000 cubic feet). A little goes a long way - Don't waste PURGE!!

CRAWLING INSECTS: Roaches, Silverfish, ants, waterbugs, crickets. Spray baseboards, other surfaces where these bugs crawl, as many as possible. Spray under sinks, behind appliances, under cabinets, down cracks, crevices, openings around plumbing and other places where these pests hide.

Spray ANT HILLS and trails hitting as many as possible. Repeat as needed.

Spiders, Sow Bugs, Centipedes: Spray walls and places where these pests crawl. Hit as many as possible.

USE AS AN AREA TREATMENT

Outdoors, patio areas, spray an area when air is quiet, reduces number of annoying insects. Barbecue areas and tables may be sprayed, but avoid spraying directly on food.

ASK about AUTOMATIC INSECT KILLING WITH the AUTOMIZER. 24-Hour Control Automatically!!

Caution: Contents under pressure. Do not puncture; do not store above 120°F.
