Regular, effective cleaning and sentitzing of equipment, utenells, and work or dining surfaces minimize the probability of contaminating food during preparation, storage or service, and the transmission of disease organisms to consumers and employees. Effective cleaning will remove soil and prevent the accumulation of food residues which may decompose or support the rapid development of food poleoning organisms or toxine. Application of effective senitizing procedures destroys those disease organisms which may be present on equipment and utanells after cleaning, and prevents the transfer of such organisms to consumers or employees, either directly through tablewere such as glasses, cups and flatware or indirectly through the food.

To prevent cross-contemination, littchenware and food-contact surfaces of equipment shall be washed, rineed, and sanitized after each use and following any interruption of operation during which time contamination may have occurred.

Where equipment and utensils are used for the preparation of foods on a continuous or production-line besis, utensits and the food-contact surfaces of equipment shall be washed, rinsed, and sanitized at intervals throughout the day on a schedule based on food temperature, type of food, and amount of food particle accumulation.
