**PRECAUTIONARY STATEMENTS
HAZARDS TO HUMANS AND DOMESTIC ANIMALS**

CAUTION

Harmful if swallowed Avoid inhalation of spray mist

Personal Protective Equipment (PPE)

Some materials that are chemical-resistant to this product are listed below If you want more options, follow the instructions for category (E) on the EPA chemical resistance category selection chart

Mixers, loaders, applicators, flaggers and other handlers must wear

- Long-sleeved shirt and long pants,
- Shoes plus socks, and
- Chemical-resistant gloves made of barrier laminate, nitrile rubber, neoprene rubber or viton

Follow manufacturer's instructions for cleaning/maintaining PPE If no such instructions for washables exist, use detergent and hot water Keep and wash PPE separately from other laundry

Discard clothing and other absorbent materials that have been drenched or heavily contaminated with this product's concentrate Do not reuse them

Engineering controls statements

When handlers use closed systems enclosed cabs or aircraft in a manner that meets with requirements listed in the Worker Protection Standard (WPS) for agricultural pesticides [40 CFR 170 240 (d) (4-6)] the handler PPE requirements may be reduced or modified as specified in the WPS

Enclosed cockpits Pilots must use an enclosed cockpit that meets the requirements listed in the WPS for agricultural pesticides [40 CFR 170 240(d)(6)]

USER SAFETY RECOMMENDATIONS

Users should

- Wash hands before eating, drinking, chewing gum, using tobacco or using the toilet
- Remove clothing/PPE immediately if pesticide gets inside Then wash thoroughly and put on clean clothing
- Remove PPE immediately after handling this product Wash the outside of gloves before removing As soon as possible, wash thoroughly and change into clean clothing

ENVIRONMENTAL HAZARDS

Do not apply directly to water, or to areas where surface water is present or to intertidal areas below the mean high water mark Do not contaminate water when disposing of equipment washwater or rinsate Drift and runoff may be hazardous to aquatic organisms in water adjacent to treated areas

DIRECTIONS FOR USE

It is a violation of Federal law to use this product in a manner inconsistent with its labeling Do not apply this product in a way that will contact workers or other persons, either directly or through drift Only protected handlers may be in the area during application For any requirements specific to your State or Tribe, consult the agency responsible for pesticide regulation Do not apply this product through any type of irrigation system

Avoid application of oil sprays just prior to or during hot weather rainy weather or drying winds Apply when temperature is above 40°F Do not apply just prior to freezing weather Use only when trees are in healthy condition, and when moisture conditions are sufficient Avoid overspraying

CITRUS SOLUBLE OIL - MEDIUM
EPA REG NO 34704 396

Do not use in a manner or at a time other than in accordance with label directions because animal, plant or crop injury, illegal residues or other undesirable results may occur

AGRICULTURAL USE REQUIREMENTS

Use this product only in accordance with its labeling and with the Worker Protection Standard, 40 CFR part 170. This Standard contains requirements for the protection of agricultural workers on farms, forests, nurseries, and greenhouses, and handlers of agricultural pesticides. It contains requirements for training, decontamination, notification, and emergency assistance. It also contains specific instructions and exceptions pertaining to the statements on this label about personal protective equipment (PPE), and restricted-entry interval. The requirements in this box only apply to uses of this product that are covered by the Worker Protection Standard.

Do not enter or allow worker entry into treated areas during the restricted entry interval (REI) of 4 hours. PPE required for early entry to treated areas that is permitted under the Worker Protection Standard and that involves contact with anything that has been treated, such as soil or water, is

- Coveralls,
- Shoes plus socks, and
- Chemical-resistant gloves made of any waterproof material

Apply when pests first appear. Do not use in undiluted form.

Use efficient equipment of the proper type. Avoid spraying during or immediately prior to hot or freezing weather, hot dry winds, rain or other unsuitable condition. Avoid overspraying or double spraying. Plants should be sprayed only when in vigorous condition and when their moisture condition is suitable.

Do not make an oil spray application within 2 weeks prior to or after an application of sulfur on olives. On Citrus in California do not make an oil application within 60 days prior to or after an application of sulfur. Do not apply prior to or during period of excessively high summer temperatures.

MIXING DIRECTIONS Before using this product, be sure the spray tank is clean and contains just enough water to cover the agitator shaft. If an injector is used, first add 25 to 50 gallons of water to tank with engine running to provide good pressure. Then put injector suction tube into the measured amount of spray oil, opening injector valve to allow the oil to be sucked into the tank. Then fill the tank with water. With enough water in tank to cover agitator shaft and with shaft in motion, add desired amount of this material for full tank. Pump this mixture through the overflow and back into tank for about two minutes to insure proper emulsification. Fill with water, adding other desired materials as tank is filling. Keep agitator running at all times. Sufficient agitation must be present to insure proper emulsification at all times.

Do not use if material does not emulsify

SPRAY DRIFT MANAGEMENT

A variety of factors including weather condition (e.g., wind direction, wind speed, temperature inversions, relative humidity) and method of application (e.g., ground, aerial, airblast) can influence pesticide drift. The applicator and grower must evaluate all factors and make appropriate adjustments when applying this product.

Wind Speed Do not apply at wind speeds greater than 15 mph at the application site.

Temperature Inversions If applying at wind speeds less than 3 mph, the applicator must determine if a) conditions of temperature inversion exist, or b) stable atmospheric conditions exist at or below nozzle height. Do not make applications into areas of temperature inversions or stable atmospheric conditions.

Droplet Size Apply as a medium or coarser spray (ASABE standard 572), and the minimum volume diameter (VMD) for spinning atomizer nozzles.

GROUND APPLICATIONS

Release Height Apply using a nozzle height of no more than 4 feet above the ground or crop canopy.

Wind Speed Do not apply at wind speeds greater than 15 mph at the application site.

**CITRUS SOLUBLE OIL MEDIUM
EPA REG NO 34704 396**

Droplet Size Apply as a medium or coarser spray (ASABE standard 572), and the minimum volume diameter (VMD) for spinning atomizer nozzles

AIRBLAST APPLICATIONS

For airblast applications turn off outward-pointing nozzles at row ends and when spraying outer row To minimize spray loss over the top in orchard applications, spray must be directed into the canopy

AERIAL APPLICATIONS

Release Height For aerial applications of agricultural products do not release spray at a height greater than 10 feet above the ground, top of crops, or above the orchard canopy

Boom Length The boom length must not exceed 75% of the wingspan or 90% of the rotor blade diameter

Swath Adjustment When applications are made with a cross-wind, the swath will be displaced downwind The applicator must compensate for this displacement at the downwind edge of the application area by adjusting the path of the aircraft upwind Leave at least one swath unsprayed at the downwind edge of the treated field

Wind Speed Do not apply at wind speeds greater than 15 mph at the application site

Droplet Size Apply as a medium or coarser spray (ASABE standard 572), and the minimum volume diameter (VMD) for spinning atomizer nozzles

Rate Limitations on Applications to Citrus Crops Maximum of 159 pounds active ingredient per acre (maximum 1500 gallons of spray mix per acre) in Florida, and 212 pounds active ingredient per acre (maximum 2000 gallons of spray mix per acre) in California (based on Thorough Coverage Spray, with 1 5 gallons of product mixed in 100 gallons of water)

Improved efficacy may be obtained when the oil is added to a partially filled spray tank under proper agitation and all foliage is thoroughly covered

Precautions in the use of oil include Do not apply oil spray when trees are wilting Do not apply oil and sulfur within 3 weeks of each other in Florida Oil spray applied after October 1 may increase susceptibility of trees to cold damage and may reduce the fruit crop the following year Oil sprays applied in the fall may inhibit solids formation in the juice and retard coloring of fruit and should not be applied within 60 days of anticipated harvest Sensitive foliage may be injured

Consult the Florida Citrus Spray and Dust Schedule, or your Agricultural Experiment Station or State Extension Service Specialist for complete details on the spraying program best suited to your locale

The formulation of this product is compatible with wettable powder materials such as Malathion 25 Spray, and products used for the correction of minor element deficiencies
