Explanation: Use additional page(s) if necessary. (For section I and Section II.)

Change paragraph one of the Supplemental Label on Old Bridge Basic Copper Sulfate so that the product would not be used in certain types of irrigation systems composed of aluminum, due to corrosivity. See covering letter and attached Supplemental Label.

EPA Est. No. 46923-NJ-01

CHEMIGATION

NOTIFICATION

JUN 9 1997

This bulletin contains supplemental Directions for Use which do not appear on the package of this product. This labeling must be in the possession of the user at the time of pesticide application. Refer to the primary label for Precautionary Statements, and Storage and Disposal Directions.

DIRECTIONS FOR USE

It is a violation of Federal laws to use this product in a manner inconsistent with its labeling. If this product is intended to be applied by chemigation, follow these directions:

Apply this product only through a sprinkler including center pivot, lateral move, end tow, side (wheel) roll, traveler, big gun, solid set, or hand move. Do not apply this product through any other type of irrigation system.

Crop injury, lack of effectiveness, or illegal pesticide residues in the crop can result from nonuniform distribution of treated water.

If you have questions about calibration, contact State Extension Service specialists, equipment manufacturers or other experts.

Do not connect an irrigation system (including greenhouse systems) used for pesticide application to a public water system unless the pesticide label prescribed safety devices for public water systems are in place.

A person knowledgeable about the chemigation system and responsible for its operation or under the supervision of the responsible person, shall shut the system down and make necessary adjustments should the need arise.

If the product is to be applied via a sprinkler system, the system must contain a functional check valve, vacuum relief valve, and low pressure drain appropriately located on the irrigation pipeline to prevent water source contamination from backflow.

The pesticide injection pipeline must contain a functional, automatic, quick-closing check valve to prevent the flow of fluid back toward the injection pump.

The pesticide injection pipeline must also contain a functional, normally closed, solenoid-operated valve located on the intake side of the injection pump and connected to the system interlock, to prevent fluid from being

withdrawn from the supply tank when the irrigation system is either automatically or manually shut down.

The system must contain functional interlocking controls to automatically shut off the pesticide injection pump when the water pump motor stops.

The irrigation line or water pump must include a functional pressure switch which will stop the water pump motor when the water pressure decreases to the point where pesticide distribution is adversely affected.

Systems must use a metering pump, such as a positive displacement injection pump (e.g., diaphragm pump), effectively designed and constructed of materials compatible with pesticides and capable of being fitted with a system interlock.

Do not apply product when wind speed favors drift beyond the area intended for treatment.

Keep the agitator running in the spray tank until spraying is completed. Apply Basic Copper Sulfate continuously for the duration of the water application. If this is impractical, apply this product at the end of the application cycle. Stop injection equipment after treatment has been completed, but continue operating irrigation system until all Basic Copper Sulfate has been cleaned through the most distant sprinkler head from the injection equipment. NOTE: Basic Copper Sulfate may be corrosive to aluminum equipment. Follow directions on the primary label covering the crop to be treated. In no case should the recommended concentrations per acre be exceeded.

EPA Reg. No. 46923-2

Dear Ms. Giles-Parker

Old Bridge Chemicals is hereby sending a Notification to the Environmental Protection Agency. We are changing the wording on our Supplemental Label so that Basic Copper Sulfate not be used in certain types of irrigation equipment because the product might be corrosive to aluminum. The only change is in the first paragraph of the label. We have highlighted that paragraph and would like to substitute the following:

Apply this product only through center pivot, lateral move, end tow, traveler, and big gun irrigation systems. Do not apply this product through any other type of irrigation system or systems that contain aluminum components.
USE IN ALUMINUM SYSTEMS IS PROHIBITED REGARDLESS OF WHETHER THE IRRIGATION SYSTEM IS FLUSHED WITH WATER AFTER USE OF THIS PRODUCT.

This notification is consistent with the provisions of PR Notice 95-2 and EPA regulations at 40 CFR 152.46, and no other changes have been made to the labeling or the confidential statement of formula of this product. I understand that it is a violation of 18 U.S.C. Section 1001 to willfully make any false statement to EPA. I further understand that if this notification is not consistent with the terms of PR Notice 95-2 and CFR 152.46, this product may be in violation of FIFRA and I may be subject to enforcement action and penalties under section 12 and 14 of FIFRA.

Yours truly,
OLD BRIDGE CHEMICALS, INC.

Joel L. Goldschmidt
