MAXFORCE® Professional Insect Control™ Roach Gel

Carton for Triple-Pack of Plastic Dispensers (front)

MAXFORCE® Professional Insect ControlTM Roach Gel

MAXFORCE® Gel may be used as a spot or crack and crevice treatment for the indoor and outdoor control of cockroaches in residential areas and the non-food/non-feed areas of institutional, warehousing and commercial establishments including hospitals, laboratories, computer facilities, sewers, buses, boats/ships, trains, pet shops and zoos.

CAUTION: KEEP OUT OF REACH OF CHILDREN

See directions on back panel

Use only in areas not easily accessible to children and pets

Product will stain porous surfaces

PRECAUTIONARY STATEMENTS HAZARDS TO HUMANS AND DOMESTIC ANIMALS

CAUTION: May be harmful if swallowed. Avoid contact with skin and clothing. Wear impervious gloves (plastic or rubber) during application. Keep exposed gel away from open food and food contact surfaces. Wash thoroughly after handling.

STATEMENT OF PRACTICAL TREATMENT: If swallowed, drink two glasses of water and induce vomiting by touching back of throat with finger. Do not induce vomiting or give anything by mouth to an unconscious person. Get madical attention. In case of emergency, call day or night, 800-426-6228.

STORAGE AND DISPOSAL: Do not contaminate water, food or feed by storage or disposal. Wrap used dispensers and place in a trash can. Store in cool, dry area.

MAXFORCE® Professional Insect Control™ Roach Gel

Carton for Triple-pack of Plastic Dispensers (back)

MAXFORCE® Professional Insect Control™ Roach Gel

DIRECTIONS FOR USE:

)

It is a violation of Federal law to use this product in a manner inconsistent with its labeling.

Use MAXFORCE® Gel only in areas not eas' y accessible to children and pets. Wear impervious gloves (plastic or rubber) when applying product. Keep exposed gel away from open food and food contact surfaces.

Do not use in food/feed product areas of food/feed processing plants, restaurants or other areas where food/feed is commercially prepared, processed, stored or exposed. Do not use in serving areas while food/feed is exposed. (Serving areas are considered areas prepared foods are served such as dining rooms, but exclude areas where food may be prepared or held.)

NOTE: Do not place bait in locations that are routinely washed, as bait will be removed by washing. Do not place treatments in locations where routine cleansing operations may transfer diluted bait to food or food preparation surfaces. Do not treat food preparation surfaces.

Non-food areas are areas such as garbage rooms, lavatories, floor drains (to sewers), entries and vestibules, offices, locker rooms, machine rooms, boiler rooms, garages, mop closets and storage (after canning or bottling). Avoid contact with porous surfaces as bait may stain.

Not for use in USDA Meat and Poultry plants.

Do not use this product in or on electrical equipment due to the possibility of shock hazard.

MAXFORCE® Gel is packaged in a plastic dispenser containing 2.1 oz. (60 g) of bait. Application rate is dependent on level of infestation and species to be controlled. Bait can be applied as spots or as a bead in cracks and crevices.

Carton for Triple Pack of Plastic Dispensers (back cont.)

<u>Species</u>	Application Rate (per sq. yd.)	<u>Recommended</u> <u>Spot Size (ধ-ধ্g)</u>
Small, such as German or brown-banded	1-2 spots, or 3-6 inch bead	
Large, such as American, smokey-brown or oriental	2-4 spots, or 6-12 inch bead	

The lower application rate should be used for low to moderate infestations or retreatments and the higher rate for more severe infestations or where the population occurs in inaccessible areas, such as in walls. Gel placements should be at or near harborages or aggregation areas, such as corners, areas of movement or cracks and crevices. Numerous smaller placements will provide faster control than few larger spots, especially for German cockroach control. For outdoor use place in areas adjacent to structure where roaches may rest or breed. Apply bait to potential points of insect entry, such as eaves, sills, and expansion joints.

Priority treatment areas may be identified by visual inspection of such areas listed above or aided by trapping techniques or spot flushings.

To apply gel, remove the cap on the nozzle, touch the tip to surface, and depress the plunger. Recap the dispenser after treatment is completed. The bait will adhere to non-greasy or non-dusty surfaces and will remain pliable and palatable to cockroaches as long as it is visibly present. Reapply when bait is no longer visibly present, according to the remaining level of infestation. A visual inspection of bait placements is recommended at one month after the initial treatment. Reapplication should occur if the bait is visibly depleted.

Pest population reduction will be apparent within a week or less.
