Reregistration Eligibility Decision for Sodium Carbonate; Weak Mineral Bases

UNITED STATES ENVIRONMENTAL PROTECTION AGENCY
WASHINGTON, D.C. 20460

OFFICE OF
PREVENTION, PESTICIDES
AND TOXIC SUBSTANCES

CERTIFIED MAIL

Dear Registrant:

This is to inform you that the Environmental Protection Agency (EPA) has completed its review of the available data on the antimicrobial, sodium carbonate. The Reregistration Eligibility Decision (RED) was approved and signed on January 26, 2006.

Based on the Agency's review of sodium carbonate, the RED and supporting documentation are now being published. A Notice of Availability will be published in the *Federal Register* announcing the publication of the RED.

The RED and supporting documents for sodium carbonate will be available to the public in EPA's Pesticide Docket EPA-HQ-OPP-2006-0028 at <http://www.regulations.gov>.

Please note that the attached RED document pertains only to sodium carbonate and presents the Agency's conclusions on the dietary, occupational and ecological risks posed by exposure to sodium carbonate alone. This document also identifies product-specific data for which the Agency intends to issue Data Call-Ins (DCIs). Note that DCIs, with all pertinent instructions, will be sent to registrants at a later date. At this time, generic confirmatory data are required. For product-specific DCIs, the first set of required responses will be due 90 days from the receipt of the DCI letter. The second set of required responses will be due eight months from the receipt of the DCI letter.

As part of the RED, the Agency has determined that sodium carbonate is eligible for reregistration. Sections IV and V of this RED document describe product-specific and generic data requirements.

If you have questions pertaining to this document, please contact the Chemical Review Manager, Rebecca Miller, at (703) 305-0012. For questions regarding product reregistration and or the product DCI that accompanies this document, please contact Marshall Swindell at (703) 308-6341.

Sincerely,

A handwritten signature in black ink, appearing to read 'Frank T. Sanders', written in a cursive style.

WHO	World Health Organization
WP	Wettable Powder
WPS	Worker Protection Standard

EXECUTIVE SUMMARY

The Environmental Protection Agency (EPA or the Agency) has completed its human health and environmental review for the reregistration case 4066; Weak Mineral Bases, and is issuing its risk management decision. Case 4066 contains four active ingredients (a.i.); however, sodium carbonate is the only active ingredient in this case with active product registrations that are eligible to undergo the reregistration process since other product registrations were previously voluntarily cancelled. For that reason, this Reregistration Eligibility Decision (RED) document will focus on sodium carbonate. The Agency has decided that sodium carbonate is eligible for reregistration. This RED addresses the active use of sodium carbonate as a fungicide for use as hard surface disinfectants and sanitizers in institutional and residential settings. There are currently two registrations that contain sodium carbonate as an active ingredient. Sodium carbonate is used as an inert in 680 active product registrations. These inert uses were previously assessed by the Agency and found not be of concern. In addition, sodium carbonate is regulated by the Food and Drug Administration (FDA) as a GRAS (generally recognized as safe; 21 CFR 184.1742) substance for use as an antioxidant, curing and pickling agent, flavoring agent and adjuvant, pH control agent, and processing aid. In addition, EPA has listed sodium carbonate as a pesticide that is considered safe for all uses, active and inert as listed in 40 CFR 180.2 (68 FR 18552, Apr. 16, 2003). It has a tolerance exemption in 40 CFR 180.1234 (41 FR 4537, Jan. 30, 1976) and was recently reassessed by the Agency in 2002.

Overall Risk Summary

Hazard Profile/Human Health Risk

The Agency recently assessed the pesticidal uses of sodium carbonate as part of an evaluation of the mineral acids (hydrochloric, carbonic, phosphoric, and sulfuric; EPA July 2002). The salts of carbonic acid risk assessment, which included sodium carbonate, found that ‘there is no available information on sodium carbonate indicative of a human health hazard resulting from the EPA-regulated uses as well as the FDA GRAS uses to the general public or any population subgroup. No additional information is needed to assess their safety.’ The Agency has determined that sodium carbonate poses no risks of concern with respect to human exposure when used according to regulation. This risk assessment provides the basis for the sodium carbonate RED decision.

The “no risk” finding is based on various conclusions of the FAO/WHO (Food and Agriculture Organization/World Health Organization) Joint Expert Committee on Food Additives, conclusions of various FDA GRAS assessments, information previously used by the Agency as part of the reregistration process, and other information available on government websites. The 2002 Agency assessment found that there are no endpoints of concern for repeated oral, dermal, or inhalation exposure to sodium carbonate based on the available toxicity data, an understanding of the human body’s ability to metabolize this chemical, and the evaluations previously conducted by FDA and WHO. There was no evidence of increased susceptibility in a developmental toxicity study. Sodium carbonate is a FDA GRAS substance (21 CFR 184.1742). Further, the Agency considers sodium carbonate to be a safe pesticide (40 CFR 180.2). Therefore a quantitative human health risk assessment was not conducted. There are no

indications of special sensitivity of infants or children resulting from exposure to sodium carbonate; therefore, the FQPA Safety Factor was removed (i.e., reduced to 1X) for sodium carbonate.

Environmental Risk

The Agency's assessment concludes that the constituents of the salts of carbonic acid, including sodium carbonate, are naturally occurring and commonly found in soil and water in the environment suggesting that releasing low levels of these chemicals would not be expected to adversely effect wildlife or water resources.

The Agency has no risk concerns for sodium carbonate with respect to non-target organisms. The Agency expects no effects to listed species or critical habitat and therefore makes a "no effect" determination for sodium carbonate.

Regulatory Decision

The Agency has determined that sodium carbonate is eligible for reregistration.

Summary of Mitigation Measures

Because no risks of concern were identified, no mitigation measures are needed for sodium carbonate.

Data Requirements

Additional product-specific data are required to complete the reregistration of sodium carbonate as described in Section V of this document.

I. Introduction

The Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) was amended in 1988 to accelerate the reregistration of products with active ingredients registered prior to November 1, 1984. The amended Act calls for the development and submission of data to support the reregistration of an active ingredient, as well as a review of all submitted data by the U.S. Environmental Protection Agency. Reregistration involves a thorough review of the scientific database underlying a pesticide's registration. The purpose of the Agency's review is to reassess the potential risks arising from the currently registered uses of the pesticide; to determine the need for additional data on health and environmental effects; and to determine whether or not the pesticide meets the "no unreasonable adverse effects" criteria of FIFRA.

On August 3, 1996, the Food Quality Protection Act of 1996 (FQPA) was signed into law. This Act amends FIFRA to require tolerance reassessment. The Agency has decided that, for those chemicals that have tolerances and are undergoing reregistration, the tolerance reassessment will be initiated through this reregistration process. The Act also requires that by 2006, EPA must review all tolerances in effect on the day before the date of the enactment of the FQPA. FQPA also amends the Federal Food, Drug, and Cosmetic Act (FFDCA) to require a safety finding in tolerance reassessment based on factors including consideration of cumulative effects of chemicals with a common mechanism of toxicity. This document presents the Agency's human health and ecological risk assessments and the Reregistration Eligibility Decision (RED) for sodium carbonate.

Sodium carbonate is used as a fungicide in products that are hard surface disinfectants and sanitizers for use in institutional and residential settings. Sodium carbonate is also used as an inert ingredient in many pesticide products. These inert uses were previously assessed by the Agency and found not be of concern.

The Agency has concluded that the FQPA Safety Factor for sodium carbonate should be removed (equivalent to 1X) as there are no endpoints of concern for repeated oral, dermal, or inhalation exposure to sodium carbonate based on the available toxicity data, an understanding of the human body's ability to metabolize this chemical, and the evaluations previously conducted by FDA and WHO. There was no evidence of increased susceptibility in a developmental toxicity study and there are no indications of special sensitivity of infants or children resulting from exposure to sodium carbonate.

Any risks summarized in this document are those that result only from the use of the active ingredient sodium carbonate. FQPA requires that the Agency consider available information concerning the cumulative effects of a particular pesticide's residues and other substances that have a common mechanism of toxicity. The reason for consideration of other substances is due to the possibility that low-level exposures to multiple chemical substances that cause a common toxic effect by a common toxic mechanism could lead to the same adverse health effect that would occur at a higher level of exposure to any of the substances individually. Unlike other pesticides for which EPA has followed a cumulative risk approach based on a common mechanism of toxicity, EPA has not made a common mechanism of toxicity finding for sodium

carbonate and any other substances. Sodium carbonate does not appear to produce a toxic metabolite produced by other substances. For the purposes of this action, therefore, EPA has not assumed that sodium carbonate has a common mechanism of toxicity with other substances. For information regarding EPA's efforts to determine which chemicals have a common mechanism of toxicity and to evaluate the cumulative effects of such chemicals, see the policy statements released by EPA's Office of Pesticide Programs concerning common mechanism determinations and procedures for cumulating effects from substances found to have a common mechanism on EPA's website at <http://www.epa.gov/pesticides/cumulative>.

This document presents the Agency's decision regarding the reregistration eligibility of the registered uses of sodium carbonate. In an effort to simplify the RED, the information presented herein is summarized from more detailed information which can be found in the technical supporting documents for sodium carbonate referenced in this RED. The risk assessments and related addenda are not included in this document, but are available in the Public Docket at <http://www.regulations.gov>.

This document consists of six sections. Section I is the introduction. Section II provides a chemical overview, a profile of the use and usage of sodium carbonate and its regulatory history. Section III, Summary of sodium carbonate risk assessment, gives an overview of the human health and environmental assessments, based on the information available to the Agency. Section IV, Risk Management, Reregistration and Tolerance Reassessment, presents the reregistration eligibility and risk management decisions. Section V, What Registrants Need to Do, summarizes the necessary label changes based on the risk mitigation measures outlined in Section IV. Finally, the Appendices list all use patterns eligible for reregistration, bibliographic information, related documents and how to access them, and Data Call-In (DCI) information.

II. CHEMICAL OVERVIEW

A. Regulatory History

Sodium carbonate is registered as an active ingredient fungicide that is used as a neutralizer and buffering agent in industrial and manufacturing processes. Sodium carbonate currently is an active ingredient in two products that are used as hard surface disinfectants and sanitizers in institutional and residential settings. In addition to sodium carbonate, these 2 products contain other active ingredients that are registered with the Agency as disinfectants and sanitizers. As an inert, sodium carbonate is found in 680 current registrations.

Sodium carbonate was first registered March 10, 1964 as an active ingredient. The Food and Drug Administration assessed the toxicity of carbonates and bicarbonates in 1975 and listed sodium carbonate as generally recognized as safe (GRAS).

B. Chemical Identification

Common Name:	Washing Soda
Chemical Name:	Sodium carbonate
Other Name:	Soda ash
Chemical Family:	Inorganic carbonates
Case Number:	4066
CAS Registry Number:	497-19-8
OPP Chemical Code:	073506
Molecular weight:	105.99
Empirical Formula:	Na_2CO_3
Basic Manufacturers:	Speer Products Inc., Medical Chemical Corp., Siamons International Inc.

C. Use Profile

The following section provides information on the currently registered uses of the sodium carbonate product. Included is an overview of the use sites and application methods of sodium carbonate. Please refer to Appendix A for a comprehensive table of uses of sodium carbonate eligible for reregistration.

Type of Pesticide:	Fungicide
Target Organism(s):	Animal pathogenic fungi
Use Sites:	Includes the following premises: household, boat, food processing plant, hospital, commercial, institutional, bathroom.
Use Classification:	Sodium carbonate is categorized as a general use pesticide.
Formulation Types:	The sodium carbonate products are formulated as liquid soluble concentrates.

Application Rates/Methods: In households, boats, commercial and institutional settings, hospitals and bathrooms; 2 ounces of solution per 1 gallon of water is desired. The solution can then be applied to walls, floors and other hard non-porous surfaces with a cloth or mop.

In food processing plants, 2.8 ounces per 5 gallons of water (200 ppm of active quaternary) is desired.

For hospital instruments, clean instruments thoroughly and rinse. Submerge article in solution for at least 10 minutes.

Further information and restrictions to these application rates and methods can be found in Appendix A.

III. SUMMARY OF SODIUM CARBONATE RISK ASSESSMENTS

The purpose of this summary is to assist the reader by identifying the key features and findings of these risk assessments, and to help the reader better understand the conclusions reached in the assessments. The human health and ecological risk assessment documents and supporting information listed in Appendix C were used to formulate the safety finding and regulatory decision for sodium carbonate. While the risk assessments and related addenda are not included in this document, they are available at <http://www.regulations.gov>. Hard copies of these documents may be found in the OPP public docket under docket number EPA-HQ-OPP-2006-0028. The OPP public docket is located in Room 119, Crystal Mall II, 1801 Bell Street, Arlington, VA, and is open Monday through Friday, excluding Federal holidays, from 8:30 a.m. to 4:00 p.m.

The human health risk assessment focused on the ammonium, sodium, potassium, and magnesium salts of carbonic acid as a group due to their chemical similarities. However, these salts all contain either the bicarbonate ion (HCO_3^{-1}) or the carbonate ion (CO_3^{-2}), and thus share some common chemistries. A major focus of the assessment is the work previously performed by FDA in assessing the safety of these chemicals as food additives.

A. Human Health Risk Assessment

1. Toxicity of Sodium carbonate

A brief overview of the toxicity of sodium carbonate is presented below. Further information on the toxicity of sodium carbonate can be found in the 'Decision Document for Salts of Carbonic Acid,' issued by the Inert Ingredient Focus Group (2002), which are available at <http://www.regulations.gov>.

The Agency has reviewed all toxicity studies submitted for sodium carbonate and has determined that the toxicological database is sufficient for reregistration. The toxicological database for sodium carbonate is currently comprised of published and unpublished studies either submitted to the Agency or obtained directly from published open literature.

Upon reviewing the available toxicity information, the Agency has concluded that there are no endpoints of concern for oral, dermal or inhalation exposure to sodium carbonate. Sodium carbonate is a FDA GRAS substance and the Agency considers it safe for all active and inert uses (40 CFR 180.2). The FDA Assessment on which these conclusions are largely based is titled "Evaluation of the Health Aspects of Carbonates and Bicarbonates as Food Ingredients" (1975).

In the 1975 FDA Assessment acute, short-term, and developmental toxicity studies and mutagenicity studies were evaluated for potassium carbonate and bicarbonate. For sodium carbonate and bicarbonate acute, short-term, and developmental toxicity studies, and mutagenicity and metabolism studies were evaluated. No chronic studies were identified. Among the key findings of the assessment as pertains to toxicity were the following:

“The results of acute toxicity and short-term feeding experiments are not readily extrapolated in determining toxic levels for carbonate salts consumed by humans. Treatment of gastric or peptic ulcers in patients with large amounts of carbonate salts in various forms has been utilized for many years and only rarely have deleterious results of changes of acid-base balance been reported. When the human respiratory and renal functions are normal, the mechanisms for disposing of bicarbonate intake in large amounts through excretion appear to be highly efficient.”

“There is no evidence in the available information on ... potassium carbonate, potassium bicarbonate, sodium carbonate, [or] sodium bicarbonate ... that demonstrates or suggests reasonable grounds to suspect a hazard to the public when used at levels that are now current or that might reasonably be expected in the future.”

Below is a toxicological profile for sodium carbonate.

Table 1: Toxicological Profile

Chemical	Toxicity	Other Information
Sodium Carbonate	<ul style="list-style-type: none"> ▪ Oral LD₅₀: rat 2880 to 4090 mg/kg; ▪ Inhalation LC₅₀: rat 2300 mg/m³ (2 hour); ▪ Inhalation LC₅₀: mouse 1200 mg/m³ (2 hour); ▪ Skin irritation: mild; ▪ Eye irritation : mild-moderate; ▪ Aqueous solutions are strongly alkaline; ▪ Concentrated solutions tend to produce local necrosis of mucous membranes; ▪ Sensitivity reactions may occur from repeated topical use; ▪ Ingestion of large quantities may produce corrosion of GI tract, vomiting, diarrhea, circulatory collapse, death; ▪ Dusts of vapors of sodium carbonate may cause irritation of mucous membranes with subsequent coughing and shortness of breath; ▪ A primary irritant at concentrations below 15% and caustic at concentrations above approximately 15%, depending on contact time, areas of exposure, and other factors; ▪ Developmental toxicity test on gestation days 6 to 15 in rats, mice and rabbits at levels of 3.4 to 340 mg/kg: no effects on nidation or survival of the dams or fetuses. 	Common name: washing soda

The available toxicity data indicates that the human body metabolizes carbonates, ammonium, magnesium, potassium, and sodium ions through well-understood pathways. In fact, the metals are necessary human nutrients. Given the long history of safe use, the available toxicity data, and an understanding of the human body’s ability to metabolize these chemicals, and the evaluations by FDA and WHO, the IIFG believes that ammonium, potassium, sodium and magnesium carbonate salts are of low oral toxicity.

Carcinogenicity Classification

Sodium carbonate is not a known carcinogen.

Mutagenicity Potential

There is no evidence that sodium carbonate has mutagenic potential.

2. FQPA Safety Factor

The FQPA Safety Factor (as required by the Food Quality Protection Act of 1996) is intended to provide an additional 10-fold safety factor (10X) to protect for special sensitivity in infants and children to specific pesticide residues in food, drinking water, residential exposures, or to compensate for an incomplete database. The FQPA Safety Factor has been removed (i.e., reduced to 1X) for sodium carbonate as there are no endpoints of concern for repeated oral, dermal, or inhalation exposure to sodium carbonate based on the available toxicity data, an understanding of the human body's ability to metabolize this chemical, and the evaluations previously conducted by FDA and WHO. There was no evidence of increased susceptibility in a developmental toxicity study and there are no indications of special sensitivity of infants or children resulting from exposure to sodium carbonate.

3. Population Adjusted Dose (PAD)

Dietary risk is characterized in terms of the Population Adjusted Dose (PAD), which reflects the reference dose (RfD), either acute or chronic, that has been adjusted to account for the FQPA Safety Factor (SF). This calculation is performed for each population subgroup. A risk estimate that is less than 100% of the acute or chronic PAD is not of concern. Since toxicological endpoints for the risk assessment were not identified based on the available data, RfDs and PADs have not been calculated for sodium carbonate.

4. Dietary and Residential Risk Assessment

Dietary and residential exposure could potentially occur from the use of sodium carbonate as an active ingredient in food-contact sanitizing solutions and hard surface disinfectants and as an inert ingredient used on agricultural crops. However, risk estimates have not been calculated for potential exposures to sodium carbonate when used as an active ingredient on food, in drinking water, or as a result of use in residential settings because there are no toxicological endpoints of concern according to a review of the available toxicity information. The inert uses were previously reviewed by the Agency and found not be of concern as well.

There are no labeled uses for sodium carbonate that would impact surface or groundwater supplies. The Agency's assessment concludes that the constituents of the salts of carbonic acid, including sodium carbonate, are commonly found in soil and water in the environment suggesting that releasing low levels of these chemicals would not normally be expected to adversely effect wildlife or water resources.

Given the widespread occurrence of these chemicals in the existing food supply, the amounts that can be applied as a disinfectant or sanitizer or as an inert to food as a result of a use in a

pesticide product would not be expected to significantly increase the existing amounts in the food supply. There is no available information on any of the chemicals considered in this document indicative of a human health hazard resulting from the EPA-regulated uses as well as the FDA GRAS uses to the general public or any population subgroup.

5. Aggregate Risk

The Food Quality Protection Act amendments to the Federal Food, Drug, and Cosmetic Act require “that there is a reasonable certainty that no harm will result from aggregate exposure to pesticide chemical residue, including all anticipated dietary exposures and other exposures for which there are reliable information”(FFDCA, Section 408(b)(2)(A)(ii)). Aggregate exposure will typically include exposures from food, drinking water, residential uses of a pesticide and other non-occupational sources of exposure.

Toxicological endpoints for the sodium carbonate risk assessment were not identified based on the available data and therefore an aggregate risk assessment was not conducted for sodium carbonate.

6. Occupational Exposure

The occupational exposure assessment for sodium carbonate addresses potential exposures and risks to humans who may be exposed in “occupational settings.” An occupational risk assessment is required for an active ingredient if certain toxicological criteria are triggered and there is potential exposure to handlers (mixers, loaders, applicators, etc.) during use or to persons entering treated sites after application is complete. For sodium carbonate there is potential for exposure; however, there are no toxicological endpoints of concern. The toxicity of sodium carbonate derives from the irritation and caustic effects. Labeling of products serves to protect against irritation and caustic effects.

7. Human Incident Data

In evaluating incidents to humans, the Agency reviewed reports from the National Poison Control Centers (PCC), the Agency’s Office of Pesticide Program’s Incident Data System (IDS), the California Pesticide Illness Surveillance Program, and the National Pesticide Telecommunications Network (NPTN). In the data sources available to the Agency, no reports of serious illness have been associated with human exposure to sodium carbonate.

B. Environmental Risk Assessment

A summary of the Agency’s environmental risk assessment is presented below. The following risk characterization is intended to describe the magnitude of the estimated environmental risks for sodium carbonate use sites and any associated uncertainties. For further information concerning all aspects about the environmental risk assessment refer to the sodium carbonate risk assessment (Decision Document for Salts of Carbonic Acid, Inert Ingredient Focus Group,2002) available <http://www.regulations.gov>.

1. Environmental Fate and Ecotoxicity Assessment/Characterization

In general, the constituents of the salts of carbonic acid are commonly found in soil and water in the environment suggesting that releasing low levels of these chemicals would not normally be expected to adversely effect wildlife or water resources. Large unintended releases may adversely affect wildlife and water resources either directly or indirectly. Direct effects may result from exceeding toxicity thresholds. Indirect effects may be manifested through disrupting ecosystems through altering pH or increasing availability of algal nutrients.

The magnitude of the pH changes, and thus the magnitude of effects, would depend on a number of factors including the amount of material released and the buffering capacity of the exposed soil or water. Normal aquatic pHs range from 5 to 9. EPA's Office of Water recommended water quality criteria for pH are 6.5 to 9 for freshwater and 6.5 to 8.5 for saltwater. At higher or lower pH aquatic life is expected to be adversely impacted. In addition, rapid changes in pH can also be detrimental to aquatic life.

The sodium salts of carbonic acid should dissociate in water resulting in a positively charged (cation) metal in solution. Dissociation is frequently dependent on pH, with lower (more acidic) pHs resulting in higher levels of dissociation and greater solubility. Aquatic toxicity of metals varies with the species of metal and its concentration. Metals do not degrade and thus are permanent in the environment. They are likely to dissipate by being sequestered in soil, sediment, and plants.

2. Risk to Threatened and Endangered Species

Due to the low likelihood of exposure and low toxicity of sodium carbonate, the Agency expects no effects to listed species or critical habitat and therefore the Agency makes a "No Effect" determination for sodium carbonate.

IV. RISK MANAGEMENT, REREGISTRATION AND TOLERANCE REASSESSMENT DECISION

A. Determination of Reregistration Eligibility

Section 4(g)(2)(A) of FIFRA calls for the Agency to determine after submission of relevant data concerning an active ingredient, whether or not products containing the active ingredient are eligible for reregistration. The Agency has previously identified and required the submission of generic (i.e., active ingredient-specific) data to support reregistration of products containing sodium carbonate as an active ingredient. The Agency has completed its review of the generic data and has determined that the data are sufficient to support reregistration of all products containing sodium carbonate.

The Agency has completed its assessment of the dietary, residential, occupational and ecological risks associated with the use of pesticide products containing the active ingredient sodium carbonate. Based on a review of the data and other available information for the active ingredient, sodium carbonate, the Agency has sufficient information on the human health and ecological effects of sodium carbonate to make decisions as part of the tolerance reassessment process under FFDCA and reregistration process under FIFRA, as amended by FQPA. The Agency has determined that sodium carbonate containing products are eligible for reregistration. Appendix A summarizes the uses of sodium carbonate that are eligible for reregistration. Appendix B identifies the generic data requirements that the Agency reviewed as part of its determination of reregistration eligibility of sodium carbonate and lists the submitted studies that the Agency found acceptable. Data gaps are identified as generic data requirements that have not been satisfied with acceptable data.

B. Public Comments and Responses

Risk assessments for sodium carbonate were not issued for public comment per the Agency's public participation process because no toxicological endpoints were identified, and as such, these assessments were qualitative in nature. To ensure that an opportunity is presented to the public to comment on the risk assessments and risk management decisions for sodium carbonate, the Agency will implement a public comment period on the sodium carbonate RED document.

C. Regulatory Position

1. Food Quality Protection Act Findings

a. “Risk Cup” Determination

As part of the FQPA tolerance reassessment process, EPA has concluded that there are no endpoints of concern for oral, dermal, or inhalation exposure to sodium carbonate based on a review of the available toxicity information. The Agency has concluded that the established tolerance exemption for sodium carbonate meets the FQPA safety standards and that the risk from dietary (food sources only) exposure is within the “risk cup.” An aggregate assessment was not conducted for exposures through food, drinking water and residential exposure since toxicological endpoints for the risk assessment of sodium carbonate were not identified based on the available data. The Agency has determined that the aggregate exposure for food and residential uses are not of concern. In reaching this determination, EPA has considered the available information on the special sensitivity of infants and children.

b. Determination of Safety to U.S. Population

As part of the FQPA tolerance reassessment process, EPA assessed the risks associated with sodium carbonate. The Agency determined in the 2002 EPA risk assessment that the established tolerance exemption for sodium carbonate meets the safety standards under the FQPA amendments to section 408(b)(2)(D) of the FFDCA and that there is a reasonable certainty no harm will result to the general population or any subgroup from the use of sodium carbonate as an active ingredient. In reaching this conclusion, the Agency has considered all available information on the toxicity, use practices, exposure scenarios and environmental behavior of sodium carbonate.

Because no toxicological endpoints were identified for sodium carbonate, a qualitative risk assessment was conducted. Based on this assessment, risks are not of concern for sodium carbonate.

c. Determination of Safety to Infants and Children

The EPA has determined that the established tolerance exemption for sodium carbonate meets the safety standards under the FQPA amendments to section 408(b)(2)(C) of the FFDCA, and that there is a reasonable certainty of no harm for infants and children. The safety determination for infants and children considers the toxicity, use practices and environmental behavior of sodium carbonate as noted above for the general population. The safety determination for infants and children also takes into consideration the possibility of increased dietary exposure due to the specific consumption patterns of infants and children, as well as the possibility of increased susceptibility to the toxic effects of sodium carbonate residues in this population subgroup.

In determining whether or not infants and children are particularly susceptible to toxic effects from exposure to residues of sodium carbonate, the Agency considered the completeness of the

hazard database for developmental and reproductive effects, the nature of the effects observed and other information.

The FQPA Safety Factor has been removed (i.e., reduced to 1X) as there are no endpoints of concern for repeated oral, dermal, or inhalation exposure to sodium carbonate based on the available toxicity data, an understanding of the human body's ability to metabolize this chemical, and the evaluations previously conducted by FDA and WHO. There was no evidence of increased susceptibility in a developmental toxicity study. Sodium carbonate is a FDA GRAS substance (21 CFR 184.1742). Further, the Agency considers sodium carbonate to be a safe pesticide (40 CFR 180.2). Therefore a quantitative human health risk assessment was not conducted. There are no indications of special sensitivity of infants or children resulting from exposure to sodium carbonate.

d. Endocrine Disruptor Effects

EPA is required under the FFDCFA, as amended by FQPA, to develop a screening program to determine whether certain substances (including all pesticide active and other ingredients) "may have an effect in humans that is similar to an effect produced by a naturally occurring estrogen, or other endocrine effects as the Administrator may designate." Following recommendations of its Endocrine Disruptor Screening and Testing Advisory Committee (EDSTAC), EPA determined that there is a scientific basis for including, as part of the program, the androgen and thyroid hormone systems, in addition to the estrogen hormone system. EPA also adopted EDSTAC's recommendation that EPA include evaluations of potential effects in wildlife. For pesticides, EPA will use FIFRA and, to the extent that effects in wildlife may help determine whether a substance may have an effect in humans, use FFDCFA authority to require wildlife evaluations. As the science develops and resources allow, screening of additional hormone systems may be added to the Endocrine Disruptor Screening Program (EDSP).

When the appropriate screening and or testing protocols being considered under the EDSP have been developed, sodium carbonate may be subject to additional screening and or testing.

e. Cumulative Risks

Risks summarized in this document are those that result only from the use of sodium carbonate as an active ingredient. The Food Quality Protection Act (FQPA) requires that the Agency consider "available information" concerning the cumulative effects of a particular pesticide's residue and "other substances that have a common mechanism of toxicity." The reason for consideration of other substances is due to the possibility that low-level exposures to multiple chemical substances that cause a common toxic effect by a common toxic mechanism could lead to the same adverse health effect as would a higher level of exposure to any of the substances individually. Unlike other pesticides for which the EPA has followed a cumulative risk approach based on a common mechanism of toxicity, the EPA has not made a common mechanism of toxicity finding for sodium carbonate. For further information regarding the EPA's efforts to determine which chemicals have a common mechanism of toxicity and to evaluate the cumulative effects of such chemicals, refer to the EPA's website at: <http://www.epa.gov/pesticides/cumulative/>.

2. Tolerance Reassessment Summary

a. Tolerance Exemptions and Tolerance Reassessment

A tolerance exemption for residues of sodium carbonate is established under 40 CFR 180.1234 (41 FR 4537, Jan. 30, 1976). The Agency considers sodium carbonate a safe pesticide when used as an active or inert ingredient under 40 CFR 180.2 (68 FR 18552, Apr. 16, 2003) and it has been deemed a GRAS substance by the FDA (21 CFR 184.1742). The tolerance exemption for sodium carbonate was reassessed by the Agency in 2002.

b. Codex Harmonization

Currently there are no codex MRLs established for sodium carbonate.

D. Regulatory Rationale

The following is a summary of the rationale for managing risks associated with the use of sodium carbonate as an active ingredient. The Agency feels there is reasonable certainty of no harm resulting from exposure to sodium carbonate as an active ingredient to the general population and to infants and children in particular. The Agency also believes there is a low toxicity concern for ecological effects. As a result of the expected low risk for toxicity and low human and environmental exposure rates from sodium carbonate, the Agency determined that a qualitative approach to assessing human health risks and ecological risks from exposure to sodium carbonate was appropriate. Therefore, no mitigation measures are necessary at this time.

1. Listed Species Considerations

a. The Endangered Species Act

Section 7 of the Endangered Species Act, 16 U.S.C. Section 1536(a)(2), requires all federal agencies to consult with the National Marine Fisheries Service (NMFS) for marine and anadromous listed species, or the United States Fish and Wildlife Services (FWS) for listed wildlife and freshwater organisms, if they are proposing an "action" that may affect listed species or their designated habitat. Each federal agency is required under the Act to insure that any action they authorize, fund, or carry out is not likely to jeopardize the continued existence of a listed species or result in the destruction or adverse modification of designated critical habitat. To jeopardize the continued existence of a listed species means "to engage in an action that reasonably would be expected, directly or indirectly, to reduce appreciably the likelihood of both the survival and recovery of a listed species in the wild by reducing the reproduction, numbers, or distribution of the species" (50 C.F.R. § 402.02).

To facilitate compliance with the requirements of the Endangered Species Act subsection (a)(2), the Environmental Protection Agency, Office of Pesticide Programs has established procedures to evaluate whether a proposed registration action may (directly or indirectly) significantly reduce the likelihood of both the survival and recovery of a listed species in the wild by reducing the reproduction, numbers, or distribution of any listed species (U.S. EPA 2004). After the Agency's screening-level risk assessment is performed, if any of the Agency's Listed Species

LOC Criteria are exceeded for either direct or indirect effects, a determination is made to identify if any listed or candidate species may co-occur in the area of the proposed pesticide use. If it is determined that listed or candidate species may be present in the proposed use areas, further biological assessment is undertaken. The extent to which listed species may be at risk determines the need for the development of a more comprehensive consultation package as required by the Endangered Species Act.

For certain use categories, the Agency assumes there will be minimal environmental exposure, and only a minimal toxicity data set is required (*Overview of the Ecological Risk Assessment Process in the Office of Pesticide Programs U.S. Environmental Protection Agency - Endangered and Threatened Species Effects Determinations*, 1/23/04, Appendix A, Section IIB, pg.81). Chemicals in these categories therefore do not undergo a full screening-level risk assessment and are considered to fall under a “no effect” determination. Due to the low likelihood of exposure and the low toxicity of sodium carbonate, the Agency expects no effects to listed species or critical habitat and therefore makes a "No Effect" determination for this chemical.

b. General Risk Mitigation

Sodium carbonate end-use products (EPs) may also contain other registered pesticides. Although the Agency is not proposing any mitigation measures for products containing sodium carbonate specific to federally listed threatened and endangered species, the Agency needs to address potential risks from other end-use products. Therefore, the Agency requires that users adopt all threatened and endangered species risk mitigation measures for all active ingredients in the product. If a product contains multiple active ingredients with conflicting threatened and endangered species risk mitigation measures, the more stringent measure(s) should be adopted.

2. Labeling

a. Label Amendment

Currently, no label amendments are necessary in order for sodium carbonate products to be eligible for reregistration.

V. WHAT REGISTRANTS NEED TO DO

The Agency has determined that sodium carbonate is eligible for reregistration. In the near future, the Agency intends to issue Data Call-In Notices (DCIs) requiring product-specific data. Generally, registrants will have 90 days from receipt of a DCI to complete and submit response forms or to request time extension and or waiver requests with a full written justification. For product-specific data, the registrant will have eight months to submit data and amended labels. The additional data requirements that the Agency intends to obtain will include, among other things, submission of the following:

The registrant needs to submit the following items for each product.

Within 90 days from the receipt of the product-specific data call-in (PDCI):

1. Completed response forms to the PDCI (i.e., PDCI response form and requirements status and registrant's response form); and
2. Submit any time extension or waiver requests with a full written justification.

Within eight months from the receipt of the PDCI:

1. Two copies of the confidential statement of formula (EPA Form 8570-4);
2. A completed original application for reregistration (EPA Form 8570-1). Indicate on the form that it is an "application for reregistration";
3. Five copies of the draft label incorporating all label amendments outlined in Table 13 of this document;
4. A completed form certifying compliance with data compensation requirements (EPA Form 8570-34);
5. If applicable, a completed form certifying compliance with cost share offer requirements (EPA Form 8570-32); and
6. The product-specific data responding to the PDCI.

Please contact Marshall Swindell at (703) 308-6341 with questions regarding product reregistration and/or the PDCI. All materials submitted in response to the PDCI should be addressed as follows:

By US mail:
Document Processing Desk (PDCI/PRB)
Marshall Swindell
US EPA (7510C)
1200 Pennsylvania Ave., NW
Washington, DC 20460

By express or courier service:

Room 266A, Crystal Mall 2
1801 South Bell Street
Arlington, VA 22202

A. End-Use Products

1. Additional Product-Specific Data and Efficacy Requirements

Section 4(g)(2)(B) of FIFRA calls for the Agency to obtain any needed product-specific data regarding the pesticide after a determination of eligibility has been made. The registrant must review previous data submissions to ensure that they meet current EPA acceptance criteria and if not, commit to conduct new studies. If a registrant believes that previously submitted data meet current testing standards, the study MRID numbers should be cited according to the instructions in the Requirement Status and Registrants Response Form provided for each product. The Agency intends to issue a separate Product-Specific Data Call-In (PDCI), outlining specific data requirements.

Efficacy data are required to ensure that the described labeled use of sodium carbonate as a disinfectant and sanitizer in end-use products is accurate and effective. The Registrant must submit as efficacy data to the Agency, Guideline No. 810.2100 (m)(2), *AOAC Germicidal and Detergent Sanitizers Method Study* (Reg. No. 875-90) for sodium carbonate.

VI. APPENDICES

Appendix A: Use Patterns Eligible for Deregistration

Use Site	Formulation	Application Rate (Range)	No. of Applications	Use Limitations
Food Handling/Storage Establishments Premises and Equipment				
Food processing equipment and food contact items	11715-34 – ready to use solution	2.8 ounces per 5 gallons of water (200 ppm of active quaternary)	Information not given on label	None given
Commercial, Institutional and Industrial Premises and Equipment				
Commercial and Institutional (Premises & Equipment)	11715-34 – ready to use solution	2 ounces per gallon of water. For best results, use Magic Guard with a cloth or mop and apply to walls, floors and other hard surfaces.	Information not given on label	None given
Residential and Public Access Premises				
Household (Premises & Contents)	11715-34 – ready to use solution	2 ounces per gallon of water. For best results, use Magic Guard with a cloth or mop and apply to walls, floors and other hard surfaces.	Information not given on label	None given

Medical premises and equipment

Hospital (Premises and Materials)	1. 11715-34 – ready to use solution	1. 2 ounces per gallon of water. For best results, use Magic Guard with a cloth or mop and apply to walls, floors and other hard surfaces.	1. Information not given on label	1. None given
-----------------------------------	-------------------------------------	--	-----------------------------------	---------------

	<p>2. 15136-10 – ready to use solution</p>	<p>2. Clean instruments thoroughly and rinse. Submerge article in solution for at least 10 minutes.</p>	<p>2. Information not given on label</p>	<p>2. This product is not to be used as a terminal sterilant/high-level disinfectant on any surface or instrument that (1) is introduced directly into the human body, either into or in contact with the bloodstream or normally sterile areas of the body, or (2) contacts intact mucous membranes but which does not ordinarily penetrate the blood barrier or otherwise enter normally sterile areas of the body. Not for sterilization of instruments contaminated with spore-bearing pathogens, viral hepatitis, tuberculosis, or rusty instruments. Contaminated instruments and hypodermic needles should always be sterilized by autoclaving. For technical use of hospitals, medical, dental and veterinary professionals only.</p>

Please Note: Although the Open Literature studies do not satisfy any of the Agency's testing guideline requirements, this information is considered adequate for characterizing the potential hazard from exposure to triethylene glycol. Therefore, no additional mammalian toxicity data will be required at this time.

Appendix C: Technical Support Documents

Additional documentation in support of this RED is maintained in the OPP docket, located in Room 119, Crystal Mall #2, 1801 South Bell Street, Arlington, VA 22202. It is open Monday through Friday, excluding legal holidays, from 8:30 am to 4:00 pm.

All documents, in hard copy form, may be viewed in the OPP docket room or downloaded or viewed via the Internet at the following site: <http://www.regulations.gov>

These documents include:

- Environmental Fate and Effects Review of Mineral Acids as Inert Ingredients in Pesticide Products. Norman Birchfield, Ph.D., Biologist. May 7, 2002. DP Barcode: D282321.
- IIFG Decision Documents on Reassessing Exemptions from the Requirement of a Tolerance for the Mineral Acids (Hydrochloric, Carbonic, Phosphoric, and Sulfuric) and their Ammonium, Calcium, Ferrous, Ferric, Magnesium, Potassium, Sodium, and/or Zinc Salts. Kathryn Boyle, CoChair IIFG and Kerry Leifer, CoChair IIFG. July 24, 2002.
- Evaluation of the Health Aspects of Carbonates and Bicarbonates as Food Ingredients. Life Sciences Research Office, Contract #FDA 223-75-2004, 1975. MRID 457727-01.

- 49059 Bio-Lab, Incorporated (1980) Bio-Guard CBQ-200: Efficacy Data.
(Compilation; unpublished study received Oct 15, 1980 under 5185-268;
CDL:243606-A)
- 49060 Bio-Lab, Incorporated (1980) Bio-Guard WOF-200: Efficacy Data.
(Compilation; unpublished study received Oct 15, 1980 under 5185-250;
CDL:243605-A)
- 49201 Petrocci, A. (1972) Technical Service Request for Confirmatory AOAC Use
Dilution Testing: TS # 1827. (Unpublished study received Sep 14, 1972 under
623-33; prepared by Onyx Chemical Co., sub- mitted by United Chemical Co.,
Inc., Kansas City, Mo.; CDL: 228451-A)
- 49229 Urban, D.; Conti, J.A. (1980) Microbiological Test Report: TAK 200 Sanitizer
Cleaner: Test Report No. MB-802-80. (Unpublished study received Oct 15,
1980 under 9265-8; prepared by Lonza, Inc., submitted by Tek Chemicals, Inc.,
Portland, Oreg.; CDL: 243612-A)
- 49586 Wahl, R.A. (1972) Report of Microbiological Efficacy by Use- Dilution Method:
Report L-10972. (Unpublished study received Dec 20, 1972 under 13645-1;

- prepared by Biotech Control Laboratories, Inc., submitted by Adams Products, Inc., Minneapolis, Minn.; CDL:238361-A)
- 49603 Wahl, R.A. (1971) Report of Microbiological Efficacy by Use-Dilution Method: Report BCI-5571. (Unpublished study received Nov 11, 1971 under 11602-1; prepared by Biotech Control Laboratories, Inc., submitted by Molar Enterprises, Minneapolis, Minn.; CDL:228897-A)
- 49645 Wahl, R.A. (1972) Report of Microbiological Efficacy by Use-Dilution Method: Report L-8472. (Unpublished study received Mar 12, 1973 under 13898-16; prepared by Biotech Control Laboratories, Inc., submitted by Contract Packaging, Inc., Des Moines, Iowa; CDL:227957-A)
- 49656 Brown, W.E.; Casillo, B. (1972) Summary Bactericidal Report Form-- USDA Product Registration: Bio-Guard DD-100. (Unpublished study received Aug 9, 1972 under unknown admin. no.; submitted by Bio-Labs, Inc., Decatur, Ga.; CDL:132529-A)
- 49659 Bio-Labs, Incorporated (1972) ?Efficacy Study|. (Reports by various sources; unpublished study received Aug 9, 1972 under unknown admin. no.; CDL:132473-A)
- 49777 Petrocci, A. (1972) Technical Service Request for Confirmatory AOAC Use Dilution Testing: TS # 1921. (Unpublished study received Oct 4, 1972 under 13798-4; prepared by Onyx Chemical Co., submitted by Forrer Chemical, Milwaukee, Wis.; CDL:228528-A)
- 49840 Bio-Lab, Incorporated (1980) Bio-Guard WOF Supra 200 Disinfectant Deodorant: Efficacy Data. (Compilation; unpublished study received Oct 14, 1980 under 5185-264; CDL:243578-A)
- 50690 Wahl, R.A. (1975) Report of Microbiological Efficacy by Use-Dilution Method: Report No. L-12475. (Unpublished study received Sep 16, 1975 under 33431-3; prepared by Biotech Control Laboratories, Inc., submitted by Interchem, St. Louis, Mo.; CDL: 235825-A)
- 50691 Lonza, Incorporated (19??) Determination of Quaternary Concentration. Undated method. (Unpublished study received Mar 26, 1975 under 33431-3; submitted by Interchem, St. Louis, Mo.; CDL: 235825-B)
- 50692 Petrocci, A. (1973) Technical Service Request for Confirmatory AOAC Use Dilution Testing. (Unpublished study received Jan 15, 1974 under 33449-1, prepared by Onyx Chemical Co., submitted by Pyroil Co., Inc., La Crosse, Wis.; CDL:235826-C)
- 51234 Keeling, P.R. (1979) Letter sent to J.H. Benedict and G.S. Hassing dated Feb 26, 1979: Repeat application patch test using EPA patch conditions. (Unpublished study received Aug 4, 1980 under 3573-37; submitted by Procter & Gamble Co.,

Cincinnati, Ohio; CDL:243063-J)

- 51286 Petrocci, A.; Clarke, P. (1979) Laboratory Communication: LC # 57607. (Unpublished study including LC #'s 57608, 57609, 57610..., received Jan 18, 1980 under 1839-49; submitted by Onyx Chemical Co., Jersey City, N.J.; CDL:242529-A)
- 51590 Eltzroth, T.E. (1968) Letter sent to Don Saurenman dated Oct 7, 1968 ?Consan|. (Unpublished study received Nov 29, 1968 under 10331-1; prepared by California State Polytechnic College, Ornamental Horticulture Dept., submitted by Del Tek, Inc., Pearland, Tex.; CDL:229921-A)
- 51591 Finch, H.C. (1968) Letter sent to Don Saurenman dated Oct 2, 1968 ?Slide germination: Consan vs. Captan 50 and Dithane 65|. (Unpublished study received Nov 29, 1968 under 10331-1; prepared by California State Polytechnic College, Biological Sciences Dept., submitted by Del Tek, Inc., Pearland, Tex.; CDL:229921-B)
- 52190 Urban, D.; Conti, J.A. (1980) Microbiological Test Report: Test Report No. MB-627-80. (Unpublished study received Jun 13, 1980 under 44389-3; prepared by Lonza, Inc., submitted by Cal Clean Products, Inc., North Hollywood, Calif.; CDL:242719-A)
- 52422 Urban, D.; Conti, J.A. (1980) Microbiological Test Report: Sanicare Pine Quat: Test Report No. MB-553-80. (Unpublished study received Mar 31, 1980 under 559-23; prepared by Lonza, Inc., submitted by Davies Young Co., Maryland Heights, Mo.; CDL:242581-A)
- 52905 Wahl, R.A. (1972) Report of Microbiological Efficacy by Use-Dilution Method. (Unpublished study received Jun 7, 1972 under 12469-1; prepared by Biotech Control Laboratories, Inc., submitted by B & T Chemical Co., Inc., St. Louis, Mo.; CDL: 229411-A)
- 52908 Wahl, R.A. (1972) Report of Microbiological Efficacy by Use-Dilution Method. (Unpublished study received Jun 7, 1972 under 12469-2; prepared by Biotech Control Laboratories, Inc., submitted by B & T Chemical Co., Inc., St. Louis, Mo.; CDL: 229406-A)
- 52909 Wahl, R.A. (1972) Report of Microbiological Efficacy by Use-Dilution Method. (Unpublished study received May 26, 1972 under 12474-2; prepared by Biotech Control Laboratories, Inc., submitted by Chem-Masters Corp., Chagrin Falls, Ohio; CDL:229404-A)
- 52912 Wahl, R.A. (1973) Report of Microbiological Efficacy. (Unpublished study received Mar 7, 1973 under unknown admin. no.; prepared by Biotech Control Laboratories, Inc., submitted by Webco Chemical Corp., Webster, Mass.; CDL:229424-A)

- 53068 Klein, M. (1972) Procedure for Testing the Virucidal Action of Lonza Formulation 30-3. (Unpublished study received Aug 16, 1972 under unknown admin. no.; submitted by ?; CDL:118626-A)
- 53069 Wahl, R.A. (1971) Report of Microbiological Efficacy by Use- Dilution Method: Report BCI-3871. (Unpublished study received Sep 24, 1971 under unknown admin. no.; prepared by Biotech Control Laboratories, Inc., submitted by Conklin Co., Inc., Shakopee, Minn.; CDL:118628-A)
- 53595 Wahl, R.A. (1971) Report of Microbiological Efficacy by Use-Dilution Method: Report BC1-5971. (Unpublished study received Dec 8, 1971 under 1652-18; prepared by Biotech Control Laboratories, Inc., submitted by Creco Co., Inc., Long Island City, N.Y.; CDL:022668-A)
- 53599 Biotech Control Laboratories, Incorporated (1970) ?Efficacy of Formulation SF-A-30-3; Report BCI-4670. (Compilation; unpublished study received Oct 8, 1971 under 1652-18; submitted by Creco Co., Inc., Long Island City, N.J.; CDL:022668-B)
- 53655 Wahl, R.A. (1977) Report of Microbiological Evaluation: Report No. L-0477. (Unpublished study received Jan 17, 1977 under 6836-31; prepared by Biotech Control Laboratories, Inc., submitted by Lonza, Inc., Fair Lawn, N.J.; CDL:228827-A)
- 53950 Wahl, R.A. (1971) Report of Microbiological Efficacy by Use-Dilution Method. (Unpublished study received Oct 5, 1971 under unknown admin. no.; prepared by Biotech Control Laboratories, Inc., submitted by Baird Chemical Industries, Fairlawn, N.J.; CDL:132828-A)
- 54027 Pyroil Company, Incorporated (1973) Determination of Activity of Quaternary Ammonium Compounds by the Epton Procedure. Analytical procedure no. OSD-41-65R dated Nov 15, 1973. (Unpublished study received Nov 26, 1973 under 33449-1; CDL:235826-A)
- 54028 Saterbak, L.L. (1973) Preparation of .008 Normal Sodium lauryl sulfate Solution. Analytical procedure no. OSR-1 dated Nov 15, 1973. (Unpublished study received Nov 26, 1973 under 33449-1, submitted by Pyroil Co., Inc., La Crosse, Wis.; CDL:235826-B)
- 55217 Rohm & Haas Company (1973) ?Efficacy of Liquid Detergent-Disinfectant|. (Compilation; unpublished study received Sep 1, 1972 under 707-74; CDL:231543-B)
- 55622 Procter & Gamble Company (1979?) Additional Toxicology Studies: Comet. Summary of studies 243063-B through 243063-N. (Unpublished study received Aug 4, 1980 under 3573-37; CDL:243063-A)
- 55630 Procter & Gamble Company (1979) ?Toxicity of Comet to Humans|.

(Compilation; unpublished study received Aug 4, 1980 under 3573- 37; CDL:243063-I)

- 55635 Procter & Gamble Company (1980) Consumer Incident Experience: Comet. (Unpublished study received Aug 4, 1980 under 3573-37; CDL:243063-O)

Appendix E: Generic Data Call-In

The Agency does not intend to issue a Generic Data Call-In at this time.

Appendix F: Product Specific Data Call-In

The Agency intends to issue a Product Specific Data Call-In at a later date.

Appendix G: Batching of End-Use Products

ANTIMICROBIAL DIVISION'S BATCHING OF PRODUCTS CONTAINING SODIUM CARBONATE; WEAK MINERAL BASES, AS THE ACTIVE INGREDIENT FOR MEETING ACUTE TOXICITY DATA REQUIREMENTS FOR REREGISTRATION

In an effort to reduce the time, resources and number of animals needed to fulfill the acute toxicity data requirements for reregistration of products containing the active ingredient Sodium Carbonate. For this RED, the Agency has batched products which can be considered similar in terms of acute toxicity. Factors considered in the sorting process include each product's active and inert ingredients (identity, percent composition and biological activity), product form (liquid, paste, solid, etc.), labeling (e.g., signal word, precautionary labeling, etc.) and acute toxicity data. The CAS Number for this active ingredient is 497-19-8.

Using available information, batching has been accomplished by the process described in the preceding paragraph. Notwithstanding the batching process, the Agency reserves the right to require, at any time, acute toxicity data for an individual product should the need arise. If a registrant chooses to rely upon previously submitted acute toxicity data, he or she may do so provided that the data base is complete and valid by today's standards (see the attached acceptance criteria), the formulation tested is considered by EPA to be similar in terms of acute toxicity, and the formulation has not been significantly altered since submission and acceptance of the acute toxicity data. If the registrant wishes to cite acute toxicity data conducted on another product, that cited product must first be approved via a CTT/PSB Similarity Clinic. Citing acute toxicity information on separate components of these formulations will not be acceptable.

This RED is unusual in that there are two products involved, EPA Reg. Nos. 11715-34 and 15136-10. Due to differences in their formulations, AD/PSB will not be able to place these two products into one batch. Thus, the registrants of 11715-34 and 15136-10 are being asked to submit six acute toxicity/primary irritation studies to support the data requirements for these products.

A third product, Registration Number 82552-1, was registered approximately three months prior to the writing of this appendix. Due to its recent registration, the registrant is not being asked to support the acute toxicity requirements for Registration Number 82552-1 in response to this RED.

Appendix H: List of All Registrants Sent the Data Call-In

A list of registrants sent the data call-in will be posted at a later date.

Appendix I: List of Available Forms

Pesticide Registration Forms are available at the following EPA internet site:

<http://www.epa.gov/opprd001/forms/>

Pesticide Registration Forms (These forms are in PDF format and require the Acrobat reader)

Instructions

1. Print out and complete the forms. (Note: Form numbers that are bolded can be filled out on your computer then printed.)
2. The completed form(s) should be submitted in hardcopy in accord with the existing policy.
3. Mail the forms, along with any additional documents necessary to comply with EPA regulations covering your request, to the address below for the Document Processing Desk.

DO NOT fax or e-mail any form containing 'Confidential Business Information' or 'Sensitive Information.'

If you have any problems accessing these forms, please contact Nicole Williams at (703) 308-5551 or by e-mail at williams.nicole@epa.gov.

The following Agency Pesticide Registration Forms are currently available via the internet at the following locations:

8570-1	Application for Pesticide Registration/Amendment	http://www.epa.gov/opprd001/forms/8570-1.pdf
8570-4	Confidential Statement of Formula	http://www.epa.gov/opprd001/forms/8570-4.pdf
8570-5	Notice of Supplemental Registration of Distribution of a Registered Pesticide Product	http://www.epa.gov/opprd001/forms/8570-5.pdf
8570-17	Application for an Experimental Use Permit	http://www.epa.gov/opprd001/forms/8570-17.pdf
8570-25	Application for/Notification of State Registration of a Pesticide To Meet a Special Local Need	http://www.epa.gov/opprd001/forms/8570-25.pdf

8570-27	Formulator's Exemption Statement	http://www.epa.gov/opprd001/forms/8570-27.pdf
8570-28	Certification of Compliance with Data Gap Procedures	http://www.epa.gov/opprd001/forms/8570-28.pdf
8570-30	Pesticide Registration Maintenance Fee Filing	http://www.epa.gov/opprd001/forms/8570-30.pdf
8570-32	Certification of Attempt to Enter into an Agreement with other Registrants for Development of Data	http://www.epa.gov/opprd001/forms/8570-32.pdf
8570-34	Certification with Respect to Citations of Data (PR Notice 98-5)	http://www.epa.gov/opppmsd1/PR_Notices/pr98-5.pdf
8570-35	Data Matrix (PR Notice 98-5)	http://www.epa.gov/opppmsd1/PR_Notices/pr98-5.pdf

Pesticide Registration Kit

www.epa.gov/pesticides/registrationkit/

Dear Registrant:

For your convenience, we have assembled an online registration kit which contains the following pertinent forms and information needed to register a pesticide product with the U.S. Environmental Protection Agency's Office of Pesticide Programs (OPP):

1. The Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Federal Food, Drug and Cosmetic Act (FFDCA) as Amended by the Food Quality Protection Act (FQPA) of 1996.
2. Pesticide Registration (PR) Notices
 - a. 83-3 Label Improvement Program--Storage and Disposal Statements
 - b. 84-1 Clarification of Label Improvement Program
 - c. 86-5 Standard Format for Data Submitted under FIFRA
 - d. 87-1 Label Improvement Program for Pesticides Applied through Irrigation Systems (Chemigation)
 - e. 87-6 Inert Ingredients in Pesticide Products Policy Statement
 - f. 90-1 Inert Ingredients in Pesticide Products; Revised Policy Statement
 - g. 95-2 Notifications, Non-notifications, and Minor Formulation Amendments
 - h. 98-1 Self Certification of Product Chemistry Data with Attachments (This document is in PDF format and requires the Acrobat reader.)

Other PR Notices can be found at http://www.epa.gov/opppmsd1/PR_Notices

3. Pesticide Product Registration Application Forms (These forms are in PDF format and will require the Acrobat reader).

- a. EPA Form No. 8570-1, Application for Pesticide Registration/Amendment
- b. EPA Form No. 8570-4, Confidential Statement of Formula
- c. EPA Form No. 8570-27, Formulator's Exemption Statement
- d. EPA Form No. 8570-34, Certification with Respect to Citations of Data
- e. EPA Form No. 8570-35, Data Matrix

4. General Pesticide Information (Some of these forms are in PDF format and will require the Acrobat reader).

- a. Registration Division Personnel Contact List
- b. Biopesticides and Pollution Prevention Division (BPPD) Contacts
- c. Antimicrobials Division Organizational Structure/Contact List
- d. 53 F.R. 15952, Pesticide Registration Procedures; Pesticide Data Requirements (PDF format)
- e. 40 CFR Part 156, Labeling Requirements for Pesticides and Devices (PDF format)
- f. 40 CFR Part 158, Data Requirements for Registration (PDF format)
- g. 50 F.R. 48833, Disclosure of Reviews of Pesticide Data (November 27, 1985)

Before submitting your application for registration, you may wish to consult some additional sources of information. These include:

1. The Office of Pesticide Programs' website.
2. The booklet "General Information on Applying for Registration of Pesticides in the United States", PB92-221811, available through the National Technical Information Service (NTIS) at the following address:

National Technical Information Service (NTIS)
5285 Port Royal Road
Springfield, VA 22161

The telephone number for NTIS is (703) 605-6000.

3. The National Pesticide Information Retrieval System (NPIRS) of Purdue University's Center for Environmental and Regulatory Information Systems. This service does charge a fee for subscriptions and custom searches. You can contact NPIRS by telephone at (765) 494-6614 or through their website.
4. The National Pesticide Telecommunications Network (NPTN) can provide information on active ingredients, uses, toxicology, and chemistry of pesticides. You can contact NPTN by telephone at (800) 858-7378 or through their website: <http://npic.orst.edu/>

The Agency will return a notice of receipt of an application for registration or amended registration, experimental use permit, or amendment to a petition if the applicant or petitioner encloses with his submission a stamped, self-addressed postcard. The postcard must contain the following entries to be completed by OPP:

1. Date of receipt;
2. EPA identifying number; and
3. Product Manager assignment.

Other identifying information may be included by the applicant to link the acknowledgment of receipt to the specific application submitted. EPA will stamp the date of receipt and provide the EPA identifying file symbol or petition number for the new submission. The identifying number should be used whenever you contact the Agency concerning an application for registration, experimental use permit, or tolerance petition.

To assist us in ensuring that all data you have submitted for the chemical are properly coded and assigned to your company, please include a list of all synonyms, common and trade names, company experimental codes, and other names which identify the chemical (including "blind" codes used when a sample was submitted for testing by commercial or academic facilities). Please provide a chemical abstract system (CAS) number if one has been assigned.
