

# **Designations for the 2006 PM<sub>2.5</sub> Standards: Evaluating the Nine Factors in Setting Nonattainment Area Boundaries**

## **Part 1 – Overview**

**Rich Damberg, Tom Rosendahl**

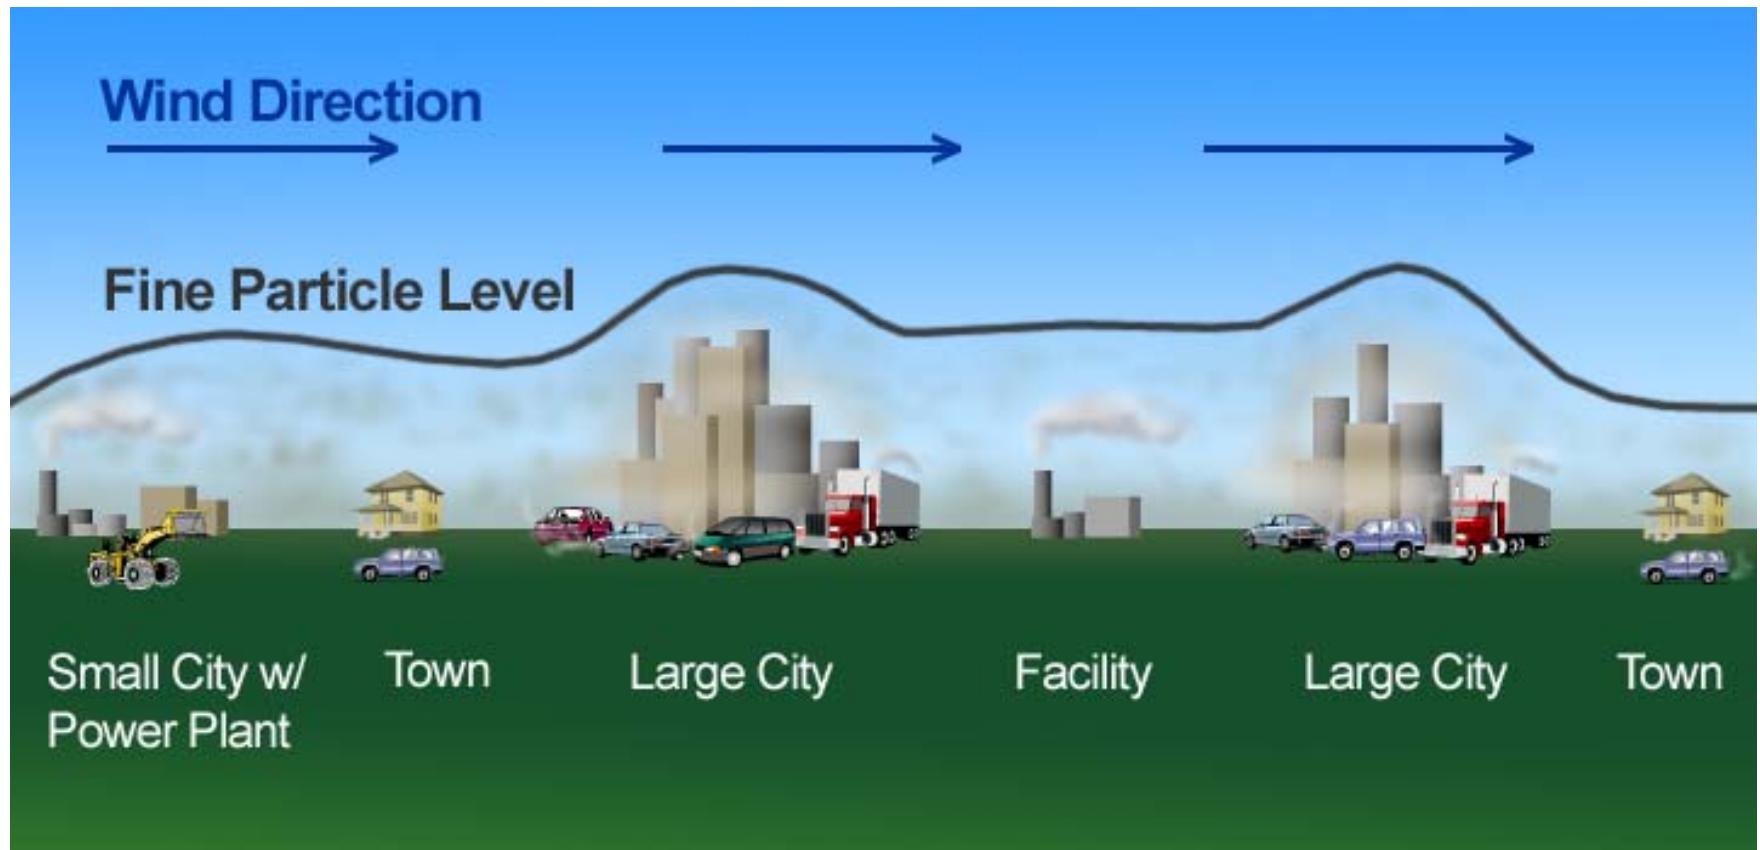

EPA Office of Air Quality Planning and Standards  
June 21, 2007

# Statutory Requirement

- “Nonattainment area” is defined in section 107 of the Clean Air Act as:

***“...any area that does not meet (or that contributes to ambient air quality in a nearby area that does not meet) the national primary or secondary ambient air quality standard for the pollutant.”***

## ***Fine Particle Concentrations are Affected by Nearby Sources and Transported Emissions***

### ***Analytical Challenge in the Designations Process:***

- Identifying the nearby areas and sources that contribute to PM2.5 violations***

# The 9 Designation Factors

To Help Determine Nearby Area of Influence  
for 24-hr NAAQS Violations

## Overall Approach

- All factors are taken into consideration in making nonattainment decisions
  - Decisions based on the weight of evidence of the nine technical factors.
- No bright lines are used for evaluating factors across all areas. Counties in a metro area are evaluated in relative terms, on a case-specific basis.
- Designations are to be based on best available current data for air quality, emissions, other factors
- In general, if a county in a metro area has a violating monitor, designate the full county.
  - Possible exceptions due to topography, size of county

## Overall Approach (cont.)

- Nonattainment problems are caused by a combination of regional and local emissions
  - For purpose of designations, focus evaluation on counties within the metro area and counties adjacent to the metro area.
- Emissions: direct PM2.5 (carbon and crustal material), SO<sub>2</sub>, NO<sub>x</sub>, VOC, ammonia
- “Speciation monitoring” techniques can be used to help identify chemical components of PM2.5 mass as well as sources of emissions
- Goal is to maintain national consistency and fairness in decision making.

## Sources of Information

- EPA Air Quality System - national PM2.5 monitoring network
  - Federal Reference Method monitors
  - Speciation Trends Network, IMPROVE
- 2002 National Emissions Inventory (version 3)
  - Direct carbon and crustal emissions are estimated from total PM2.5 emissions with the SMOKE emissions processor
- 2000 US Census population data and population growth data
- 2000 US Census, Journey to Work database
- Vehicle miles traveled
  - Estimates obtained from FHWA Highway Performance Modeling System
- NOAA weather and meteorological data
- NOAA HYSPLIT back trajectory model
- OMB 2003 metro area definitions
- USGS topographic information
- Satellite imagery – Google Earth

*blank*

# Population / Degree of Urbanization

- What type of area is it?
  - Large metro area
  - Moderate-sized city
  - Small town / township
- How many counties make up the metro area?
  - Core Based Statistical Area (CBSA) and Consolidated Statistical Area (CSA)
- How do the counties in the area compare in terms of population density?
- Is the area affected by urban sprawl?

## PM2.5 Monitoring Data 2003 - 2005: "New" Areas Violating 24-Hour Standard

EPA Reg	Site	State	County	County Pop	Core-Based Statistical Area (CBSA)	CBSA POP	24-Hour Avg	Annual Avg

**San Jose – Sunnyvale-Santa Clara Metro Area**  
**Population 1.7 million**

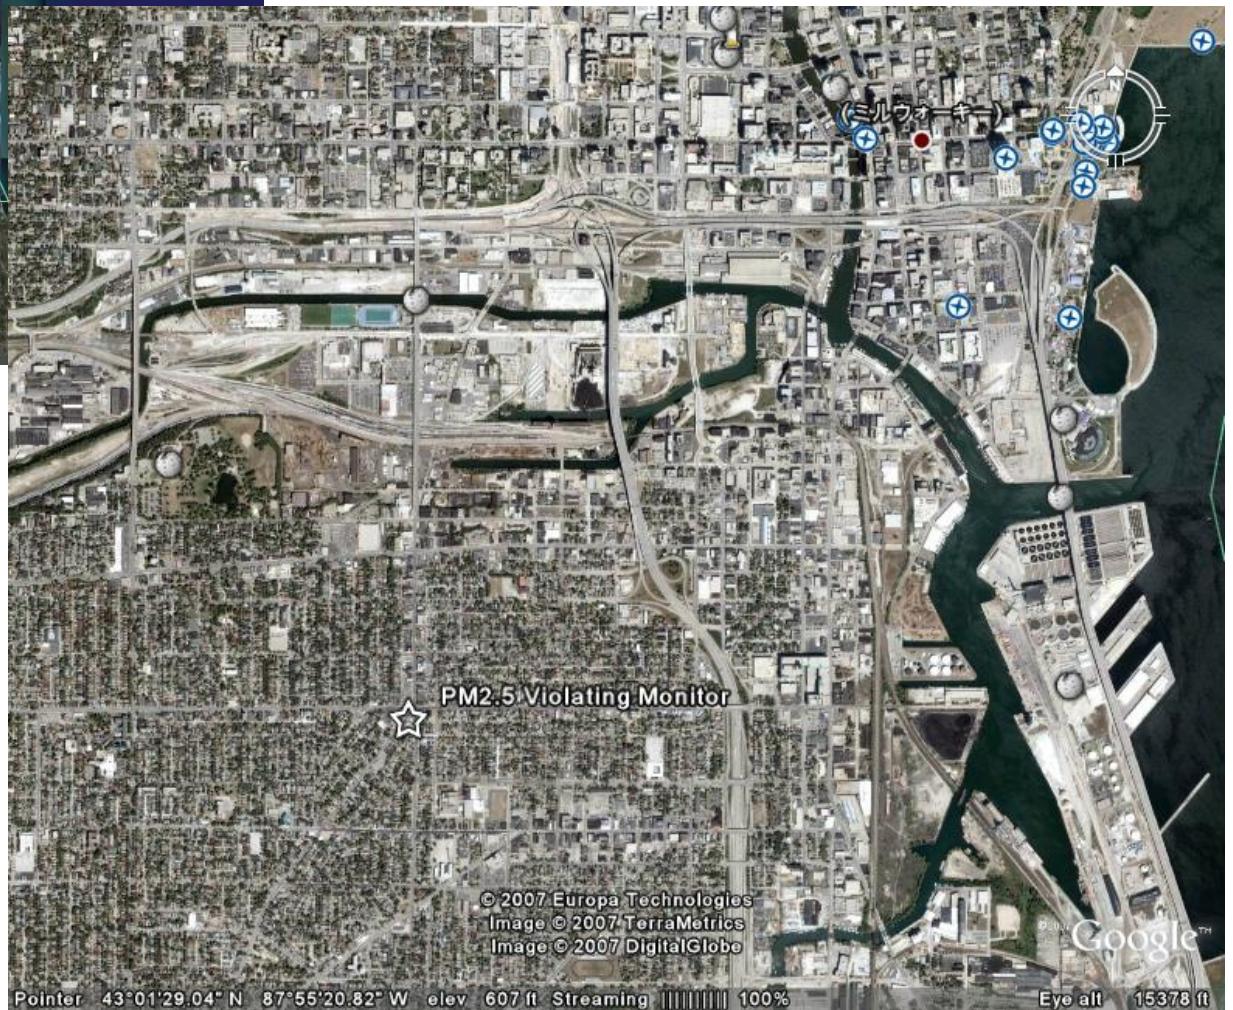

**Shoshone County, Idaho – City of Pinehurst**  
**Population 13,000**

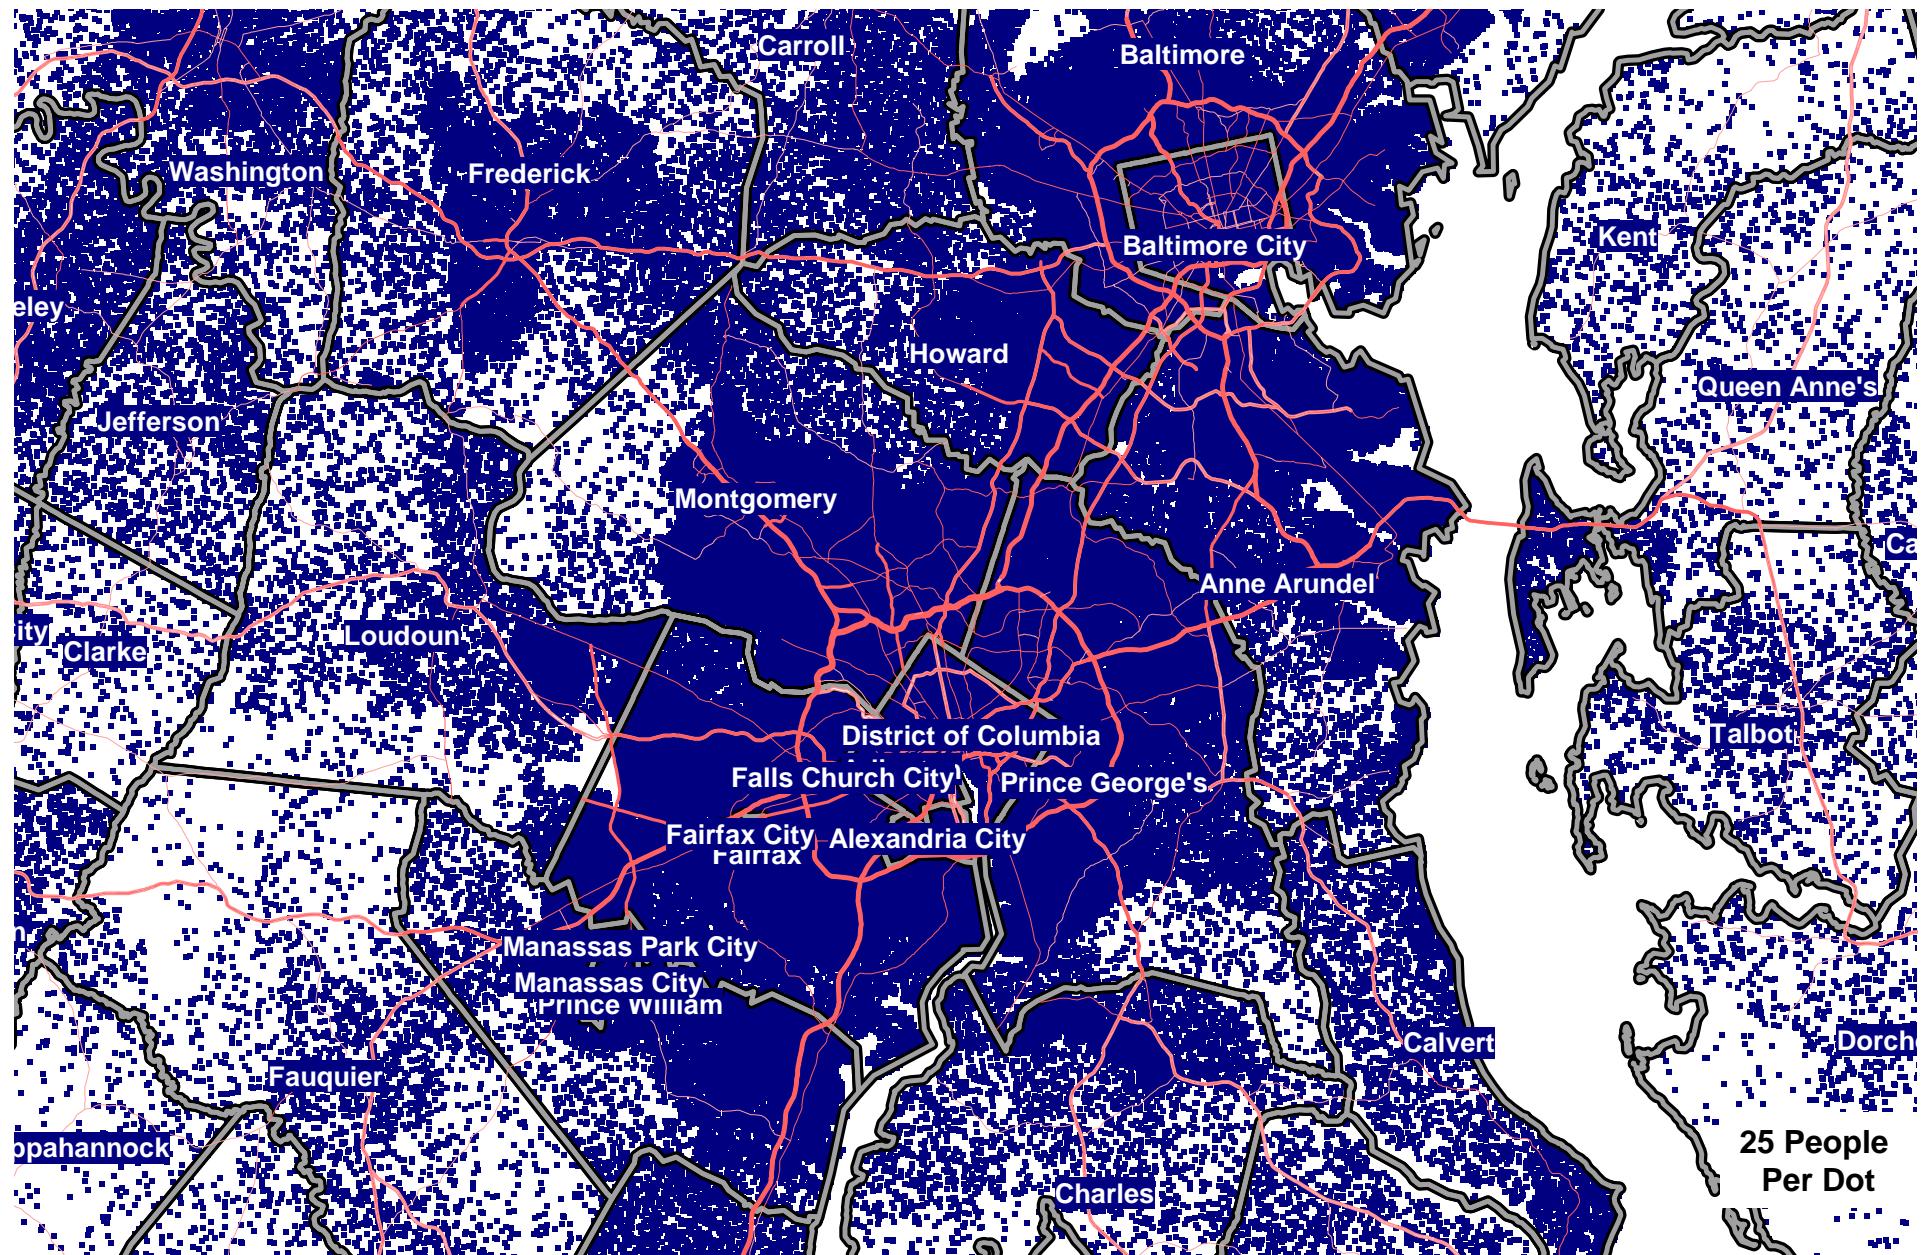

Milwaukee, Wisconsin  
Population 1.5 million  
39 ug/m<sup>3</sup>

*Satellite imagery can help illustrate the degree of urbanization and can help identify important emissions sources in the vicinity of the violating monitor(s)*

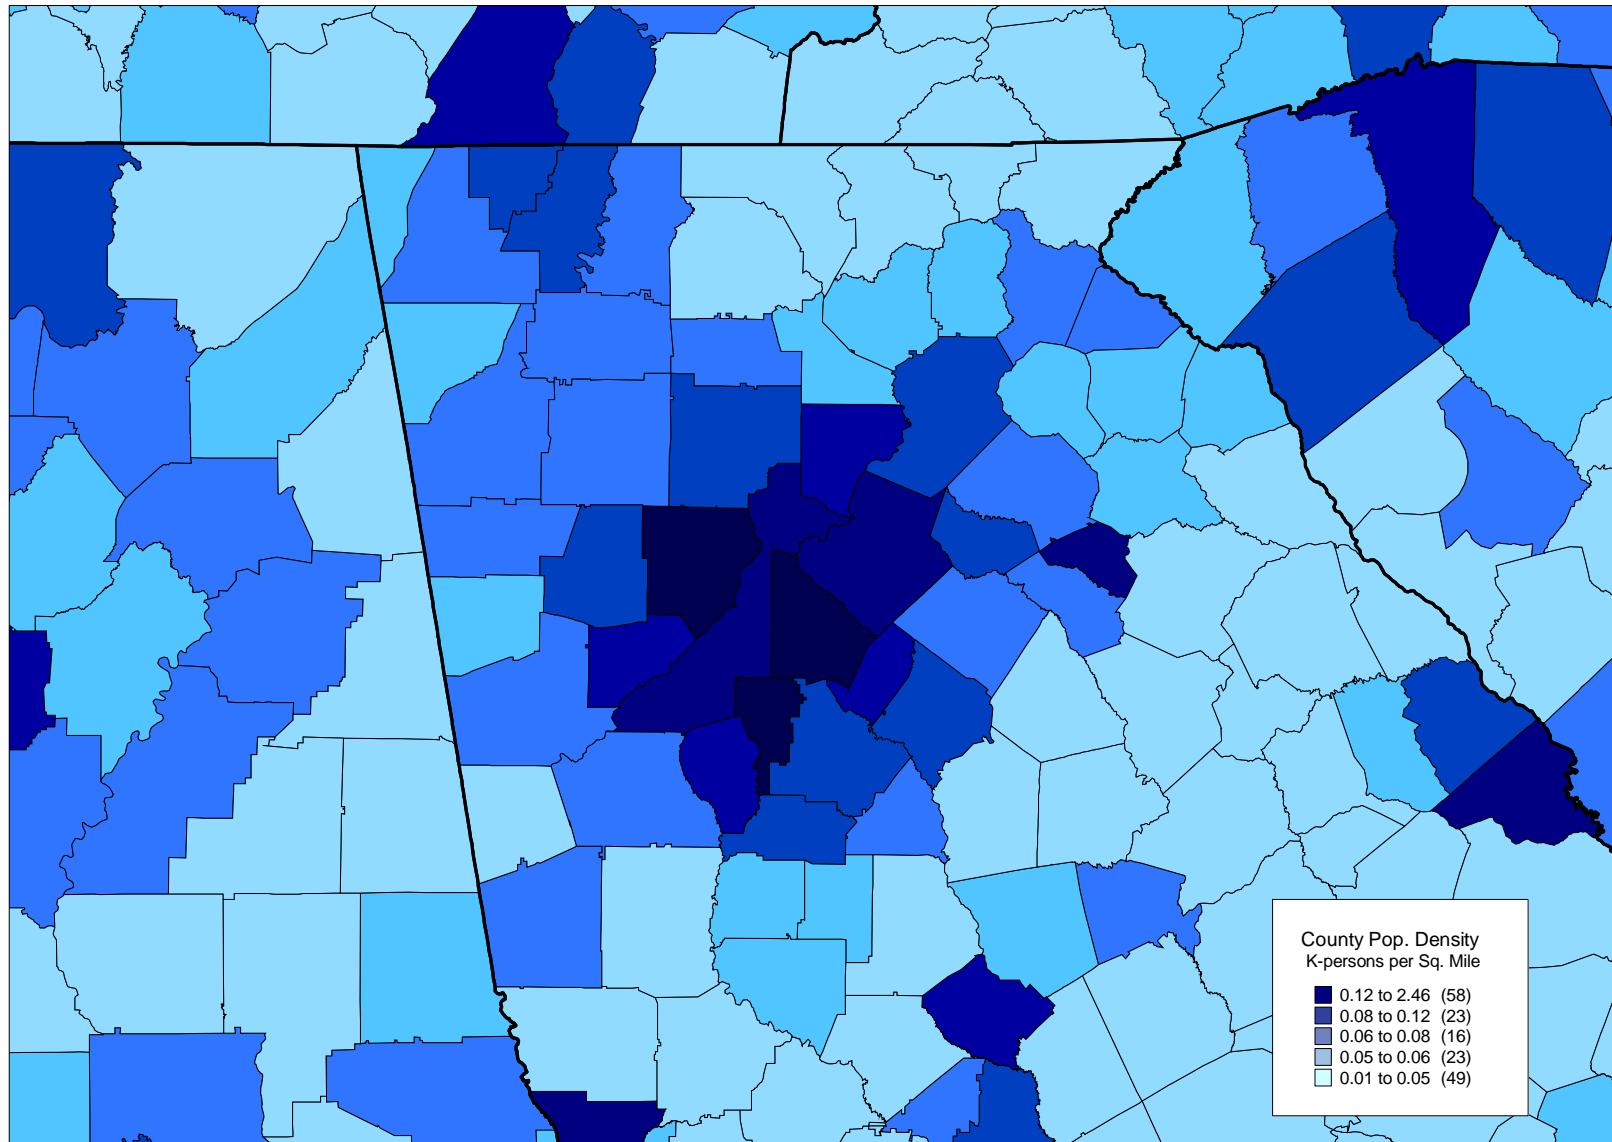

# *Population Density*

## *Washington, DC*

# *Population Density*

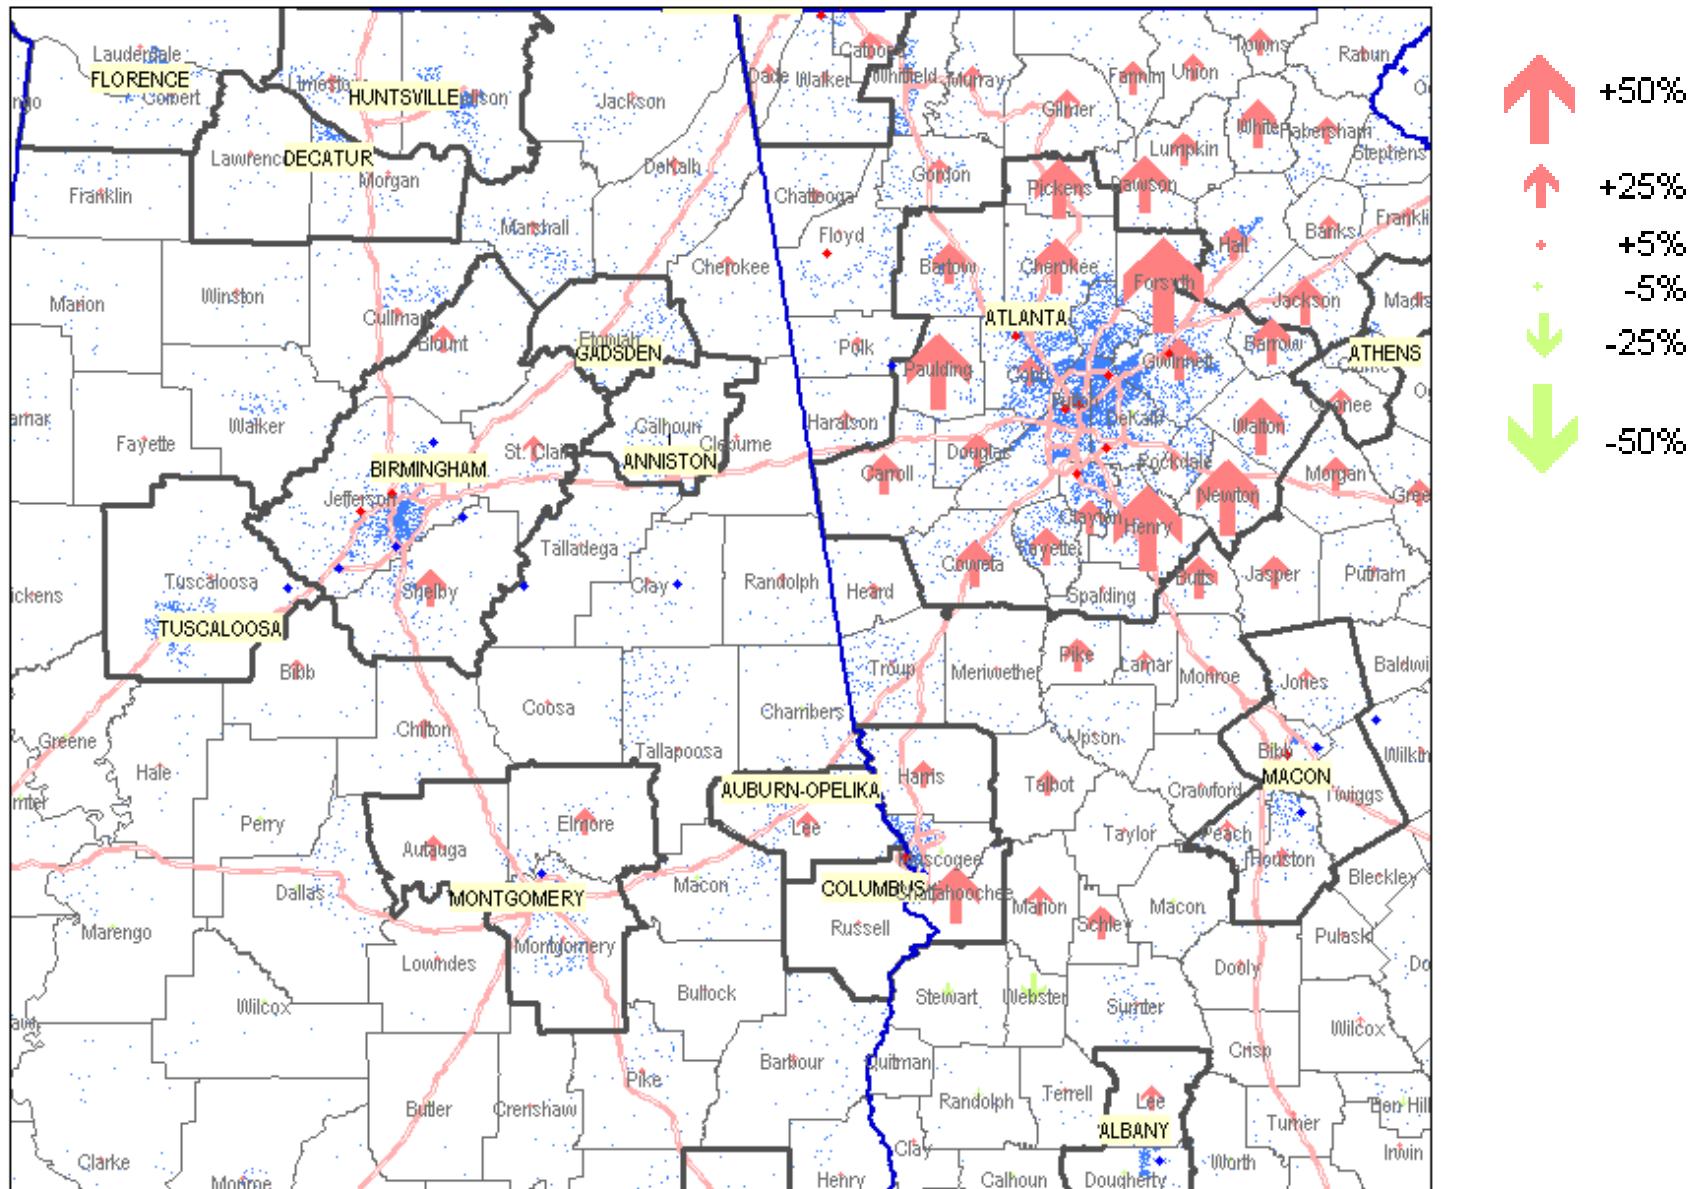

## Atlanta, GA

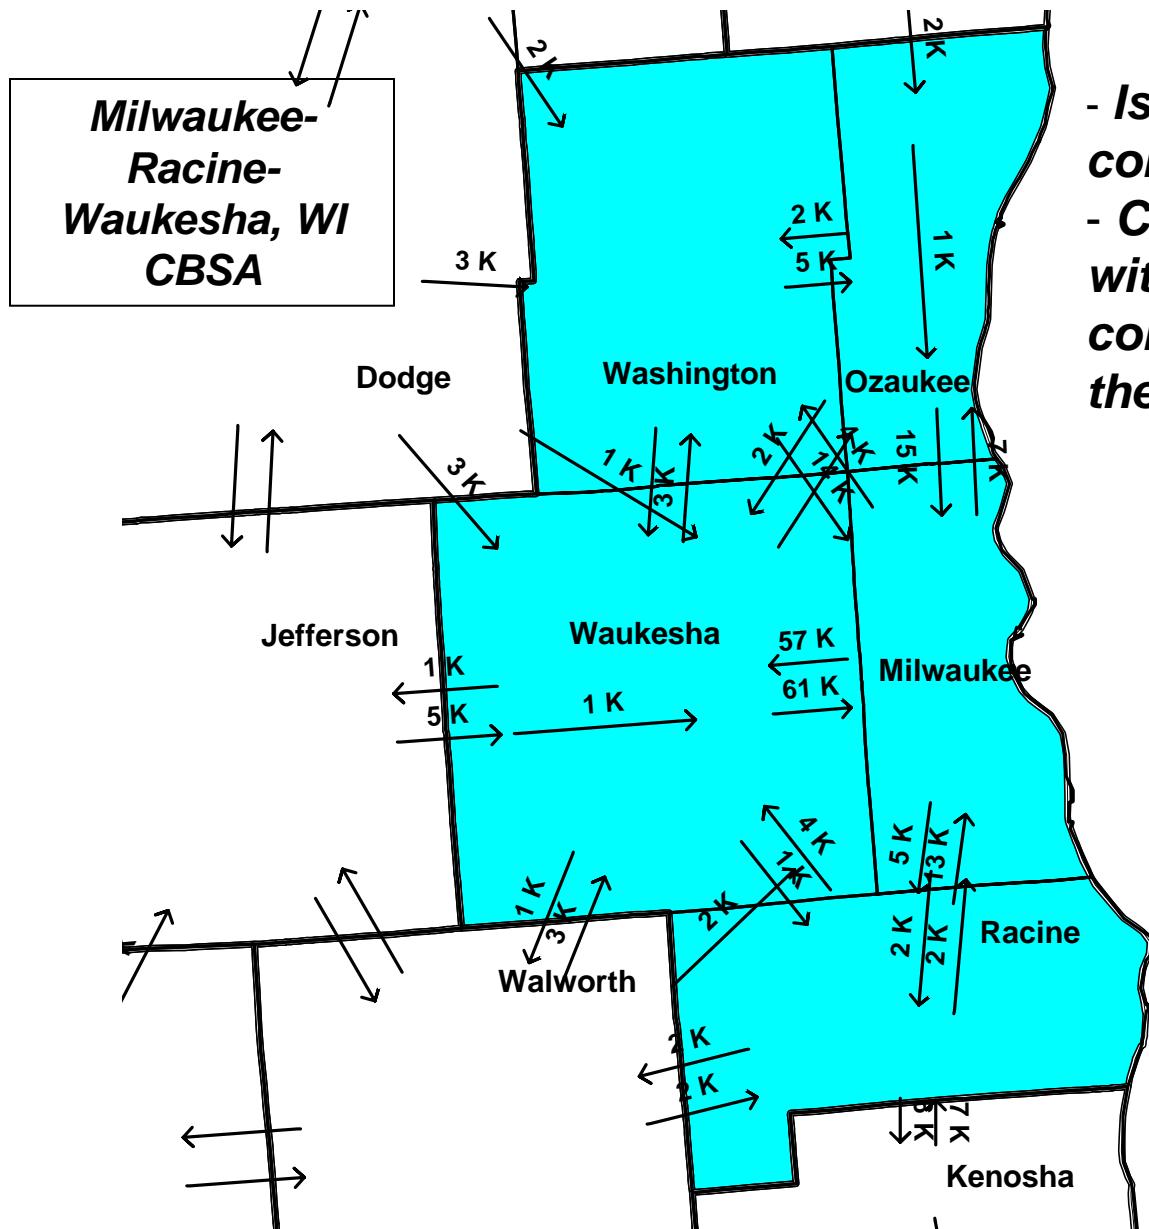

# Growth Rates

- What has been the population growth rate in the area in recent years?
- Which counties have the highest rates?
  - The counties with highest population density may differ from those with the highest growth rates.
- Is growth expected to continue?

# Population Growth Rates

# Traffic and Commuting Patterns

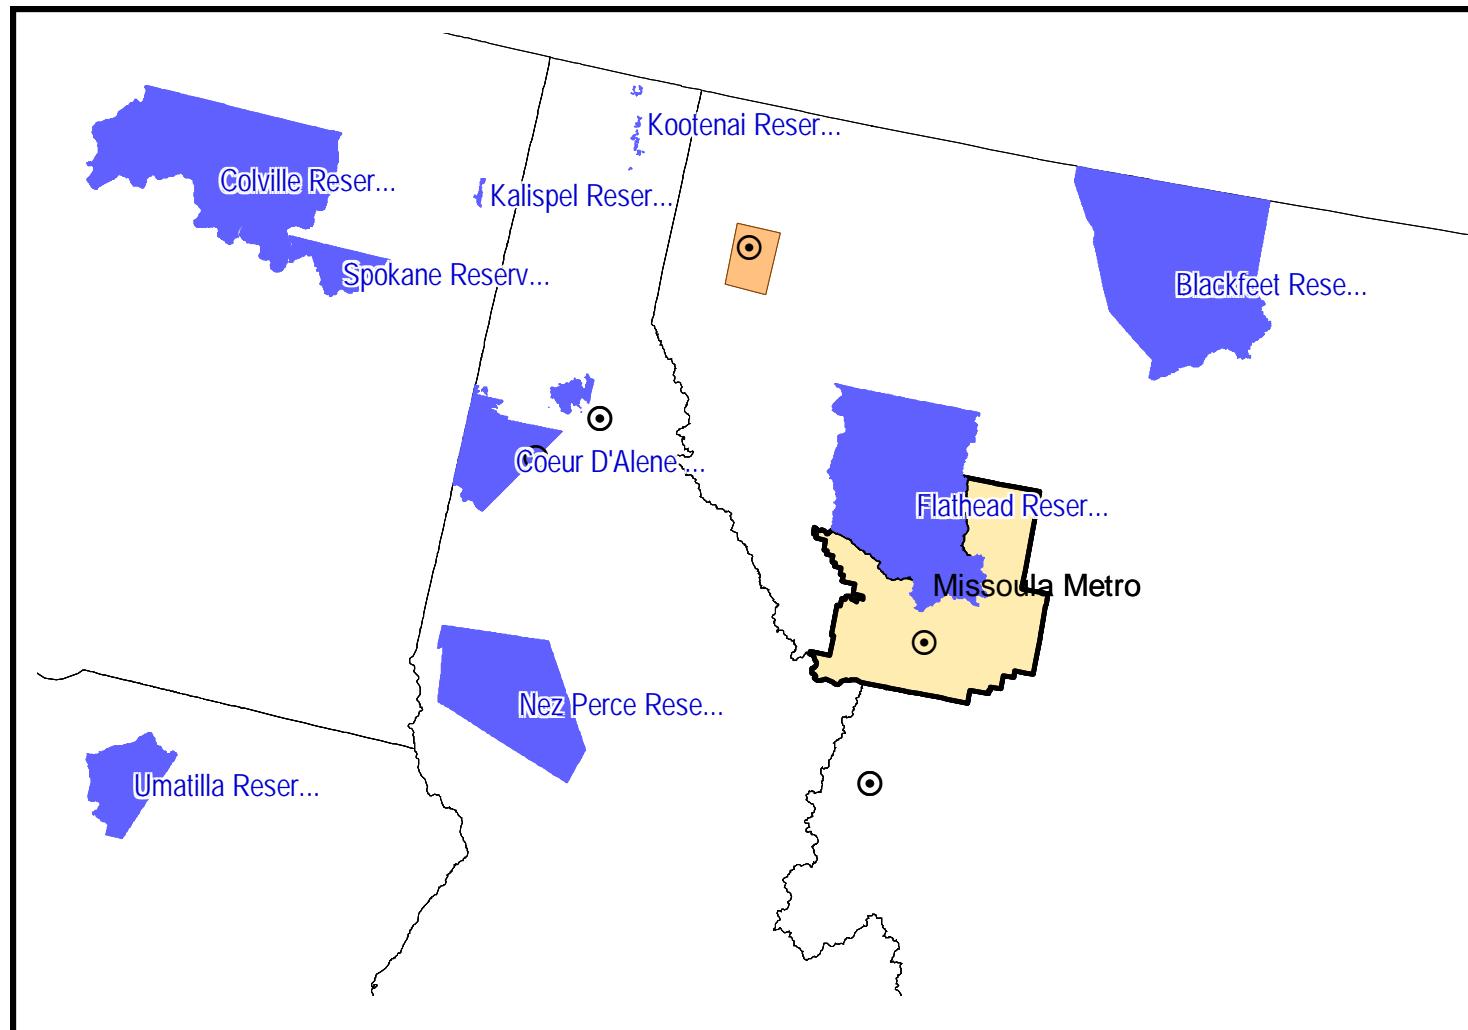

- Is there a high degree of commuting in the metro area?
- Consider inclusion of counties with significant level of commuting to counties within the city or metro area

Percentage of workers who commute to other counties in the metro area

Source: 2000 US Census,  
Journey to Work data

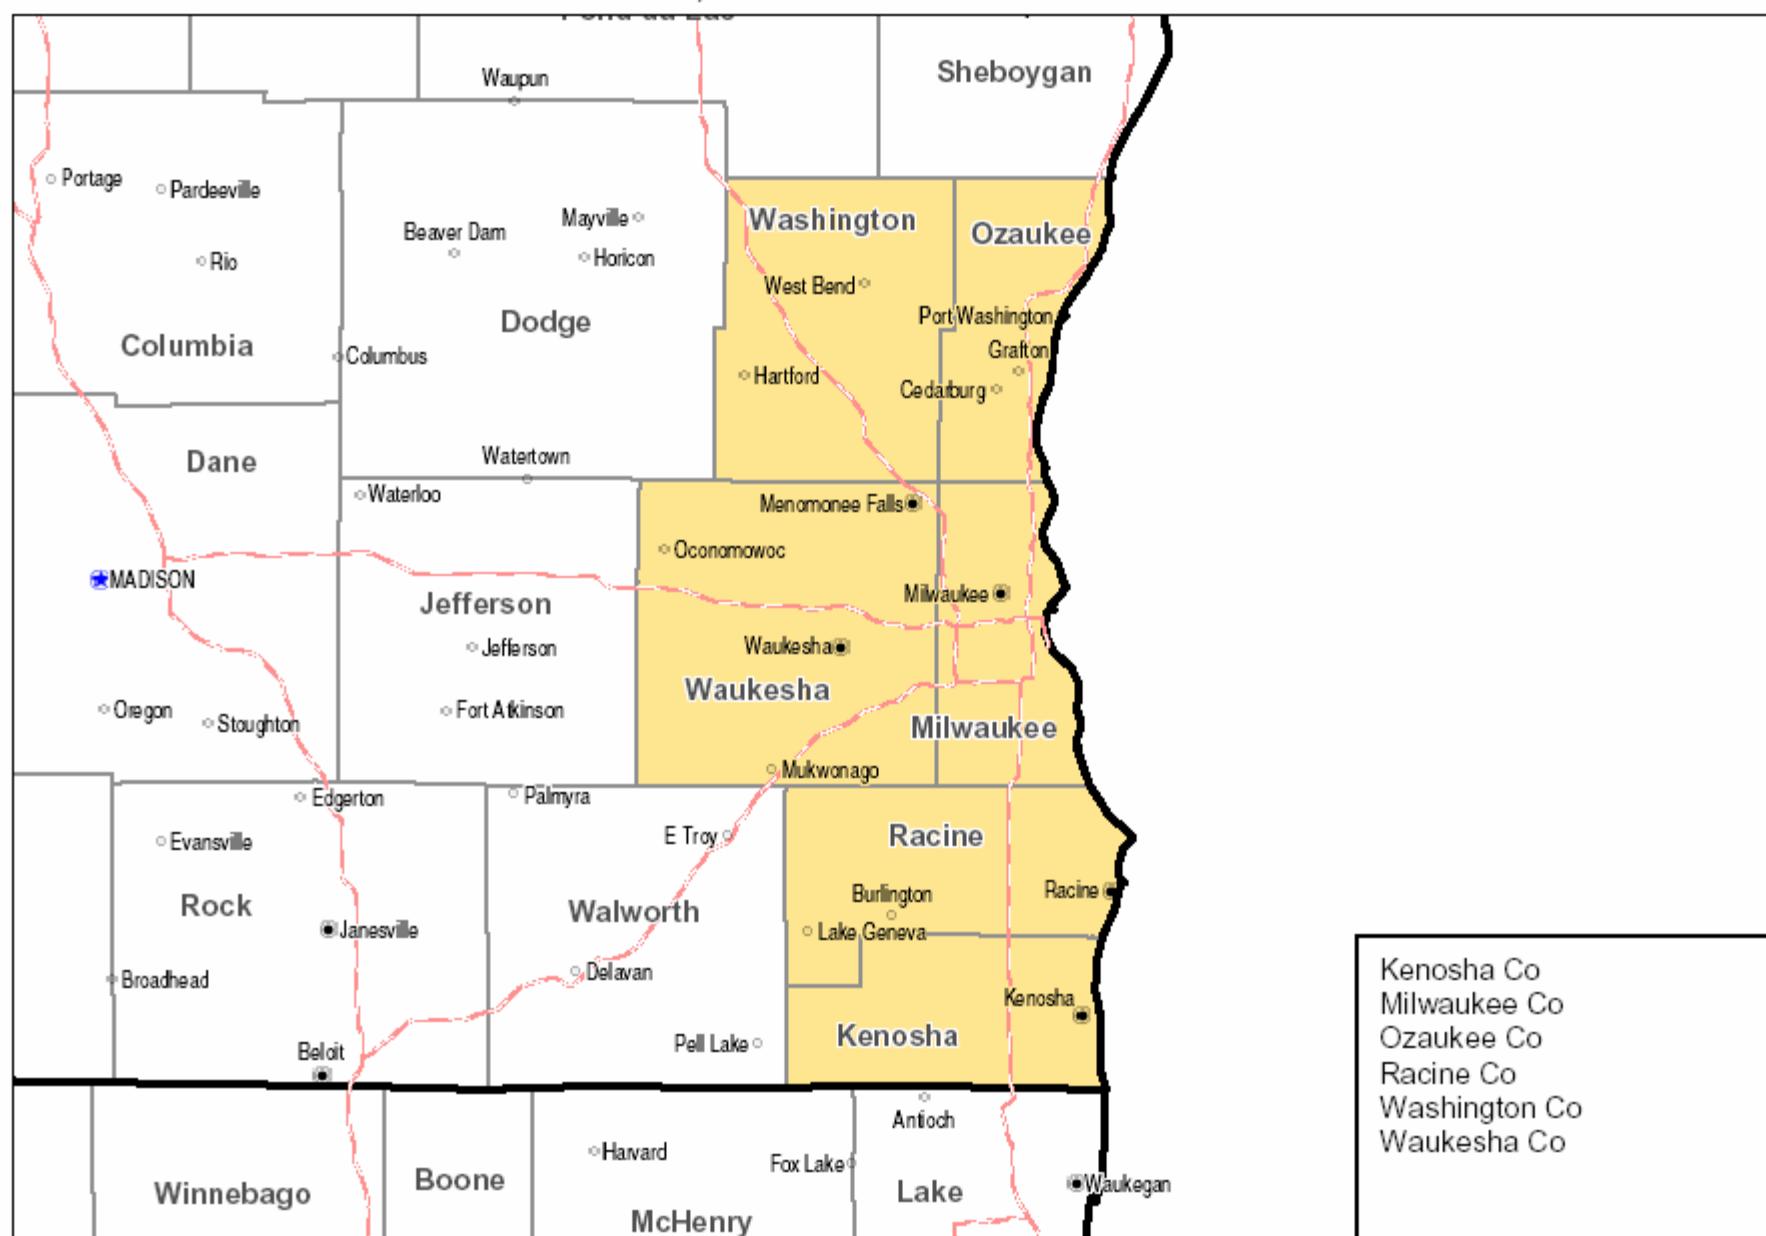

## Jurisdictional and Other Boundaries

- County and metropolitan area boundaries
  - Including multi-state areas
- Metropolitan planning organizations
- Existing nonattainment area boundaries
- Air pollution control districts
- Tribal lands

## *Consideration of Tribal Lands*

## Milwaukee-Racine, WI 8-hour Ozone Nonattainment Area

Boundaries and locations are for illustrative purposes only. This is not a regulatory document.

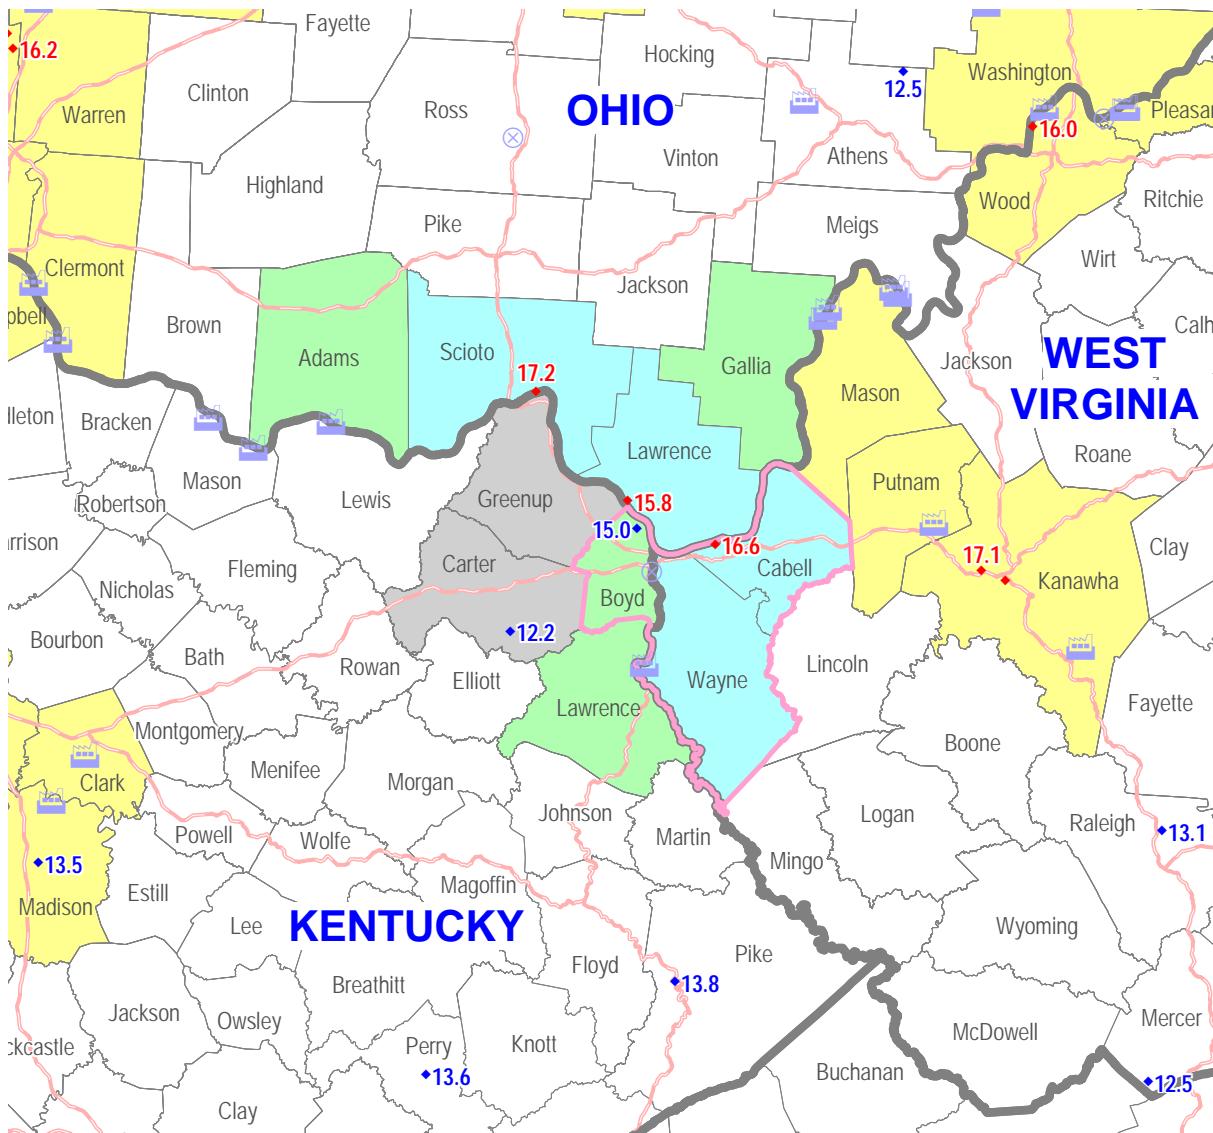

BAY AREA  
AIR QUALITY  
MANAGEMENT  
DISTRICT

### NINE COUNTY JURISDICTION OF THE BAAQMD

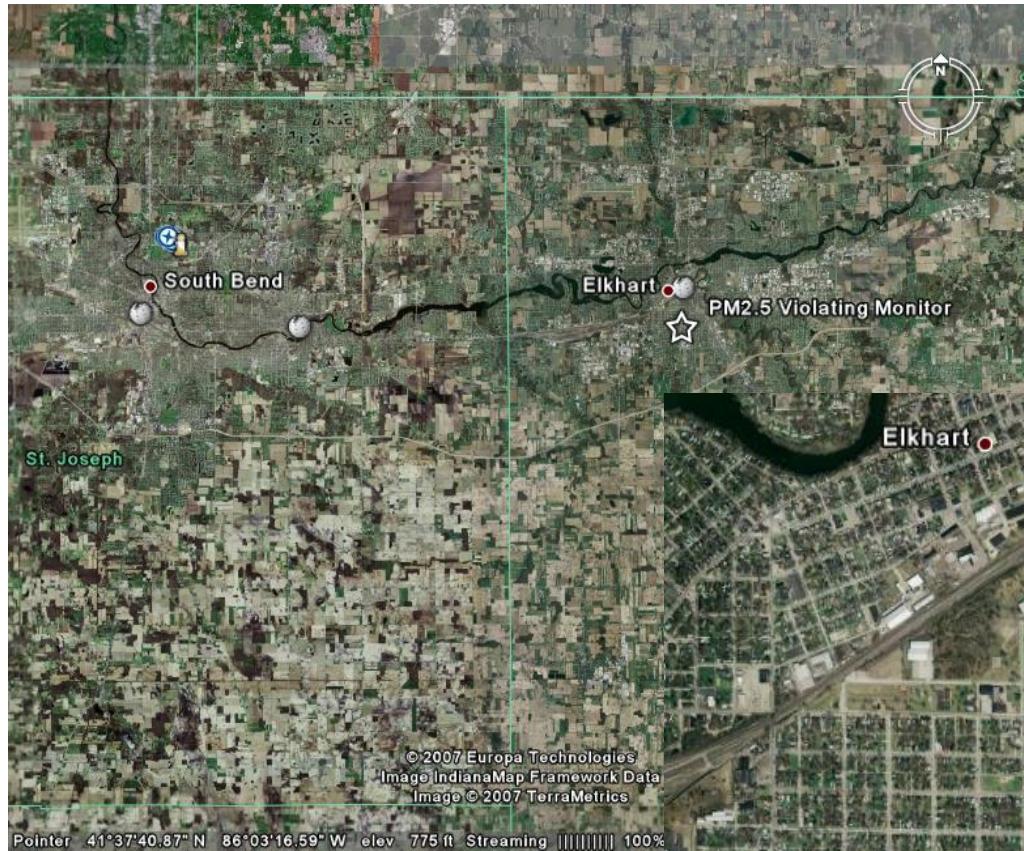

# Huntington-Ashland Multi-State Area

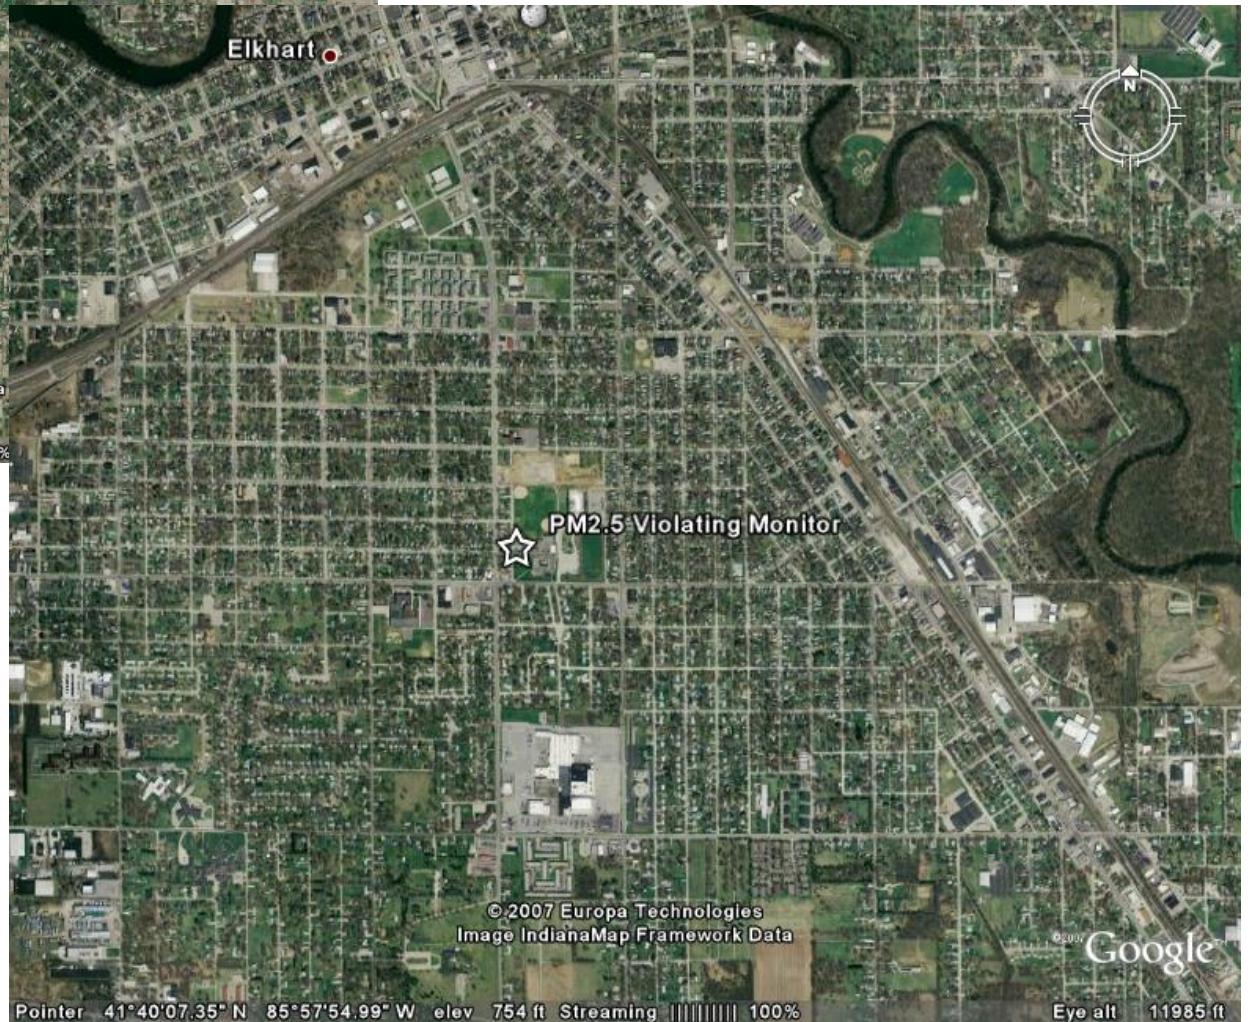

## Topography / Geography

- Are there topographic features that defines or affects the contributing source region?
  - Examples: high mountains, narrow valley
- Primarily a western issue

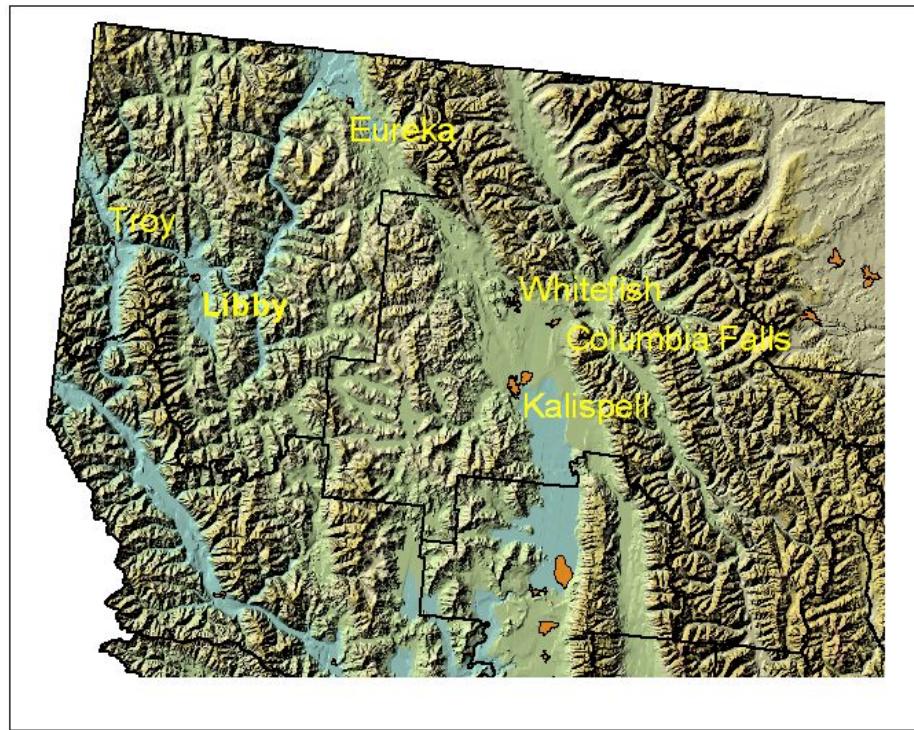

Elkhart, Indiana  
Population 183,000  
36 ug/m<sup>3</sup>

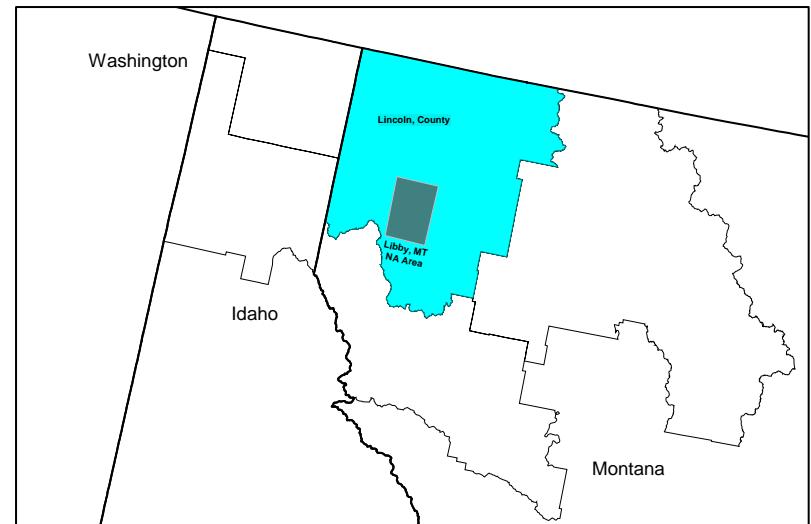

*Kinda flat ...  
Topography is not  
much of an issue here.*

## Libby, MT PM 2.5 Nonattainment Designation

Topography / Geography

- Example: Libby, Montana

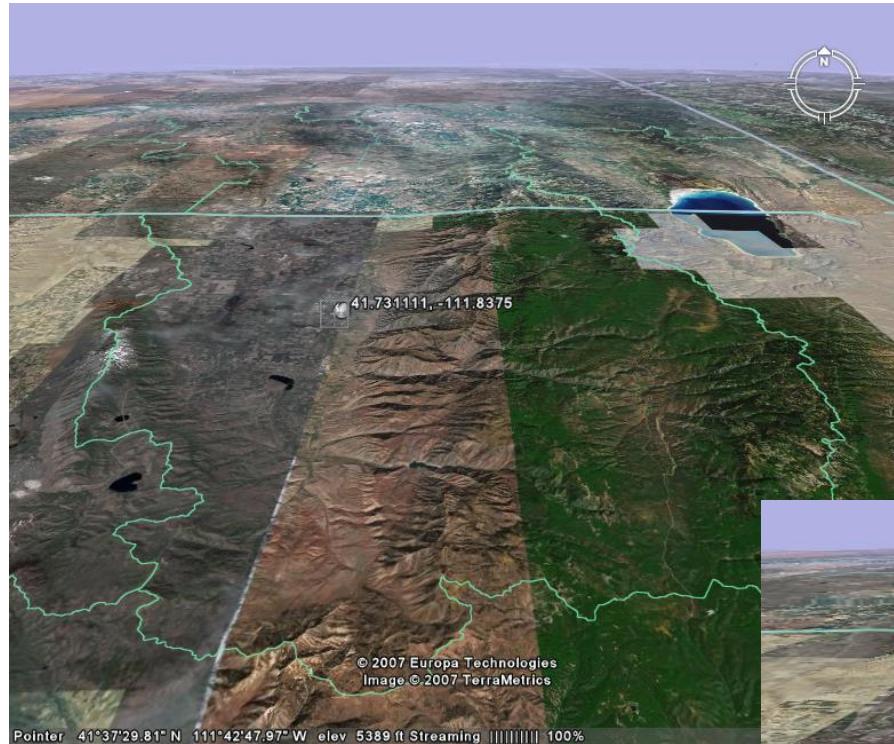

## ***Shoshone County, Idaho – City of Pinehurst***

*Small town  
in large county*

## ***Shoshone County, Idaho – City of Pinehurst***

Logan, Utah  
Population 103,000  
65 ug/m<sup>3</sup>

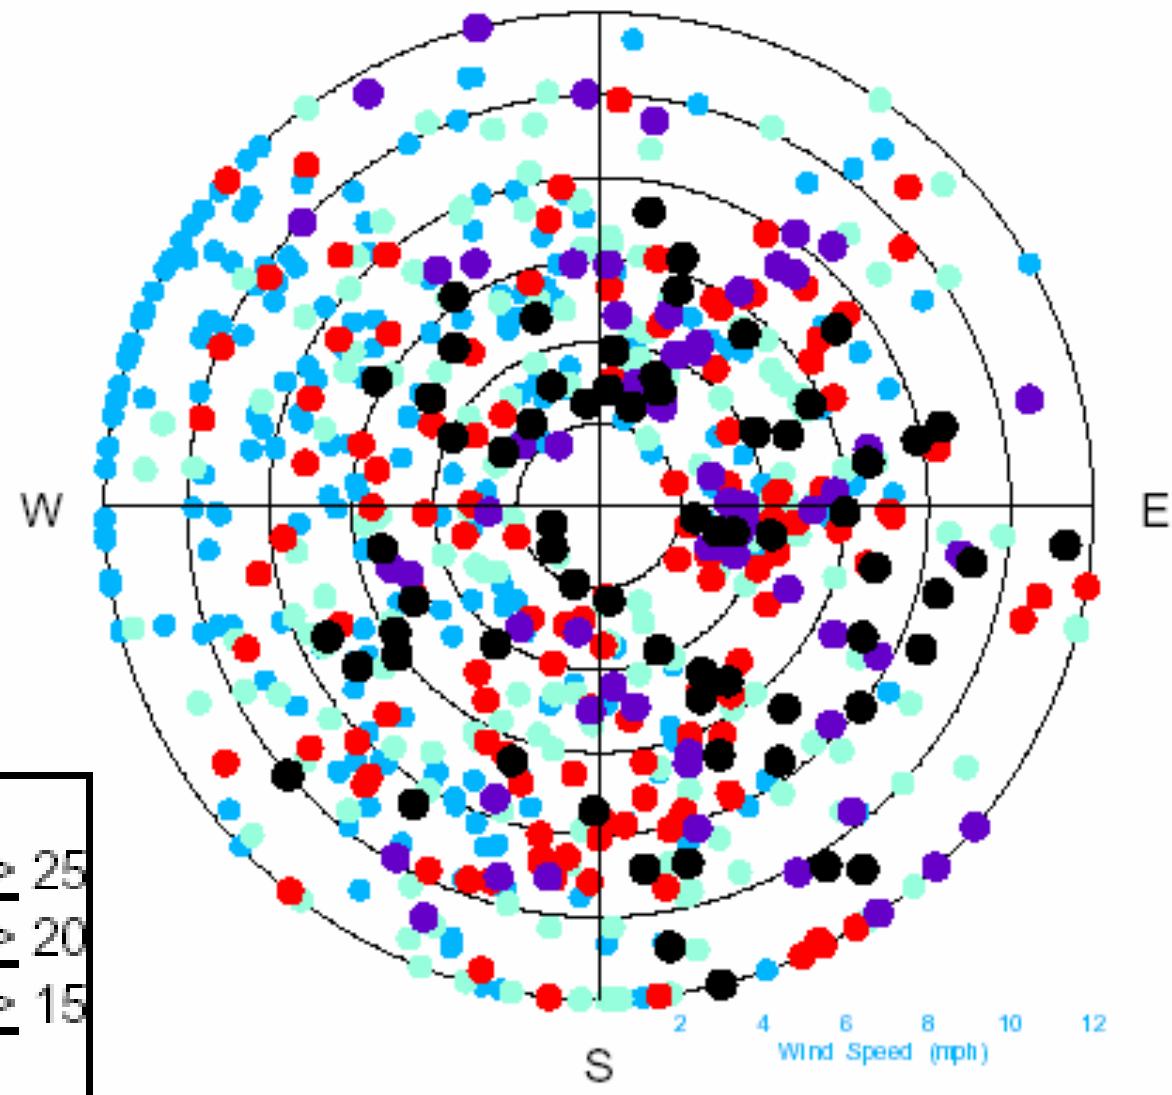

## Meteorology

Possible tools:

- Pollution roses based on hourly wind direction data and 24-hour PM<sub>2.5</sub> data
- Back trajectories for analysis of high days

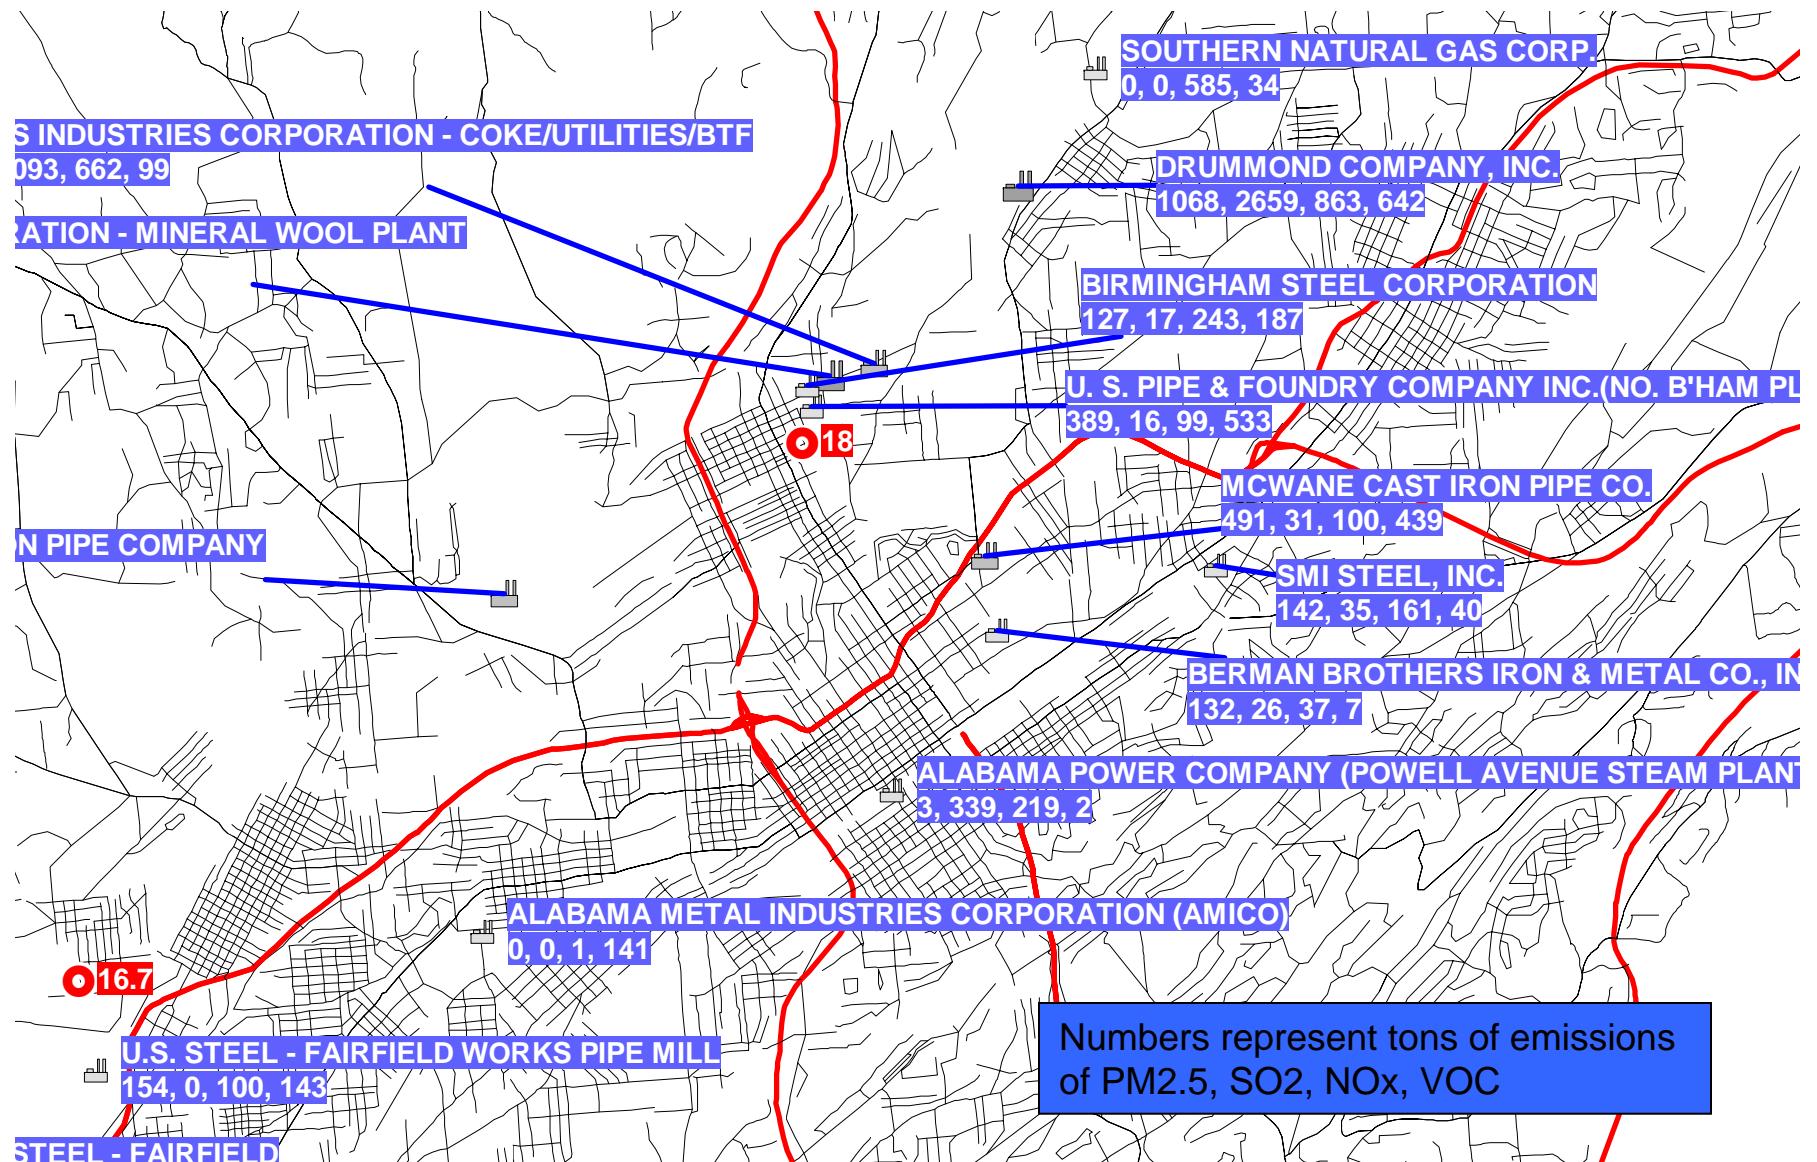

Area= St. Louis, MO- IL; Site= 290990012

## Emissions Data

- Where are important nearby emissions sources located?
- What are emissions of PM2.5 and precursors by county?
- Are certain sources key contributors during specific seasons?
  - Speciation data provides important information
  - High nitrate and carbon in winter, sulfate in summer

# Birmingham, AL Local Emissions Sources

## *Birmingham, AL – 2001 Emissions*

		PM	SO2	NOX	VOC	Amm	Carbon	Crustal
Birmingham,AL	<b>Jefferson</b>	<b>12,772</b>	<b>56,703</b>	<b>69,364</b>	<b>44,782</b>	<b>1,198</b>	<b>3,574</b>	<b>7,061</b>
