

## 10.13 Run NPSM

1. Click this button to execute **NPSM**. The model run is performed by executing a DOS-based program, HSPF Version 11.0.
2. When the model run is complete, you will be asked whether you want to view the output. Click **Yes** to view the output or **No** to return to the NPSM interface. Regardless of your selection, you will be able to view the output at any time by clicking the “View Output” button.

**Tip:** Remember to save the project before running the model. Save the current project by clicking the **Save the current project** button. Also be sure to note the names and locations of project files and output files for the current simulation run.

### TUTORIAL

- Run NPSM.
- Click **Yes** to view the output.
