

US EPA Pretreatment Webcast Series

The Pretreatment 101 Series: Pretreatment Standards—Local Limits Development

Webcast: Thursday, September 29, 2011

Two-hour audio Web broadcast

Eastern: 1:00 pm – 3:00 pm

Mountain: 11:00 am – 1:00 pm

Central: 12:00 pm – 2:00 pm

Pacific: 10:00 am – 12:00 pm

Session Description

This webcast is intended for POTW personnel responsible for local pretreatment program implementation.

The National Pretreatment Program regulations identify specific requirements that apply to industrial users. These requirements include 3 types of Pretreatment Standards (general and specific prohibitions, categorical pretreatment standards, and local limits). Of the 3 types of Standards, “Local Limits” are the Pretreatment Standards that are developed by individual publicly owned treatment works (POTWs). Local limits are designed to prevent the discharge of pollutants that pass through, interfere with, or are otherwise incompatible with the POTWs. The federal regulations at 40 CFR 403.8(f)(4) and 122.44(j)(2)(ii) require POTWs to evaluate the need for local limits and, if necessary, to implement, and enforce specific limits as part of the program activities. This webcast provides an overview of the local limit development process, the implementation of local limits on discharges to POTWs, and the content of a local limit evaluation report. (This is a continuation of the Overview of Pretreatment Standards webcast.)
