Range Rover, Range Rover
Sport

Part 1

Issued: 03/16/26

Application for Emissions Certification

Model Year: 2027
Manufacturer Name: Jaguar Land Rover

Test Group: VJLXT03.0PTC
Test Group Description: 3.0 liter I-6 LDT, PHEV

Durability Group: VJLXGPGNNHTR
Durability Group Description: Positive ignition - Four stroke
Gasoline Fuelled
Direct Fuel Injection
Ceramic Monolith Pd/Rh Catalyst

Evaporative Group: VJLXR0175M1C

Applicable Standards
CARB / EPA FTP Standard: Federal - Tier 3 Bin 30
California – LEV III SULEV30

Carlines Covered: 309: Range Rover 460PS PHEV
311: Range Rover P550 PHEV
234: Range Rover Sport P460 PHEV
235: Range Rover Sport P550 PHEV

EPA & CARB Response Requested By: June 5th 2026

For Questions, Contact: Vahakn Varjabedian (201) 818 – 8139
Amy Brambill abrambil@jaguarlandrover.com

6.2. EDV Selection

According to 86.1828-01 the Range Rover is expected to be worst-case for exhaust emission compliance within this test group. The configuration with the highest road-load power was selected as worst-case. The EDV and DDV were tested in the worst-case driver mode for all test cycles. The worst-case driver mode for this test group is normal mode. Driver modes are described in section 12.3.

All the vehicle configurations certified are covered by data from the above EDVs.

6.3. EV-CIS Test Numbers

REVISED:

7. Test Results (Cover page)

Refer to the enclosed Certification Summary Information Report processed by the EPA EV-CIS system.

REVISED:

8. Emission Testing Waiver Statements

High Altitude Testing

Based on an engineering evaluation of appropriate high-altitude emission testing Jaguar state that light-duty vehicles included in this application comply with the applicable emission standards at high altitude.

According to 40 CFR §86.1829-01(b)(1)(ii)(B) Jaguar Land Rover waive high altitude emissions data submittal on the basis of this statement.

Data submittal waiver for Idle CO Testing

Based on an engineering evaluation of appropriate Idle CO emissions Jaguar Land Rover state that light-duty vehicles included in this application comply with all applicable idle CO emission standards.

According to 40 CFR §86.1829-01(b)(5)(ii) Jaguar Land Rover waive Idle CO emissions data submittal on the basis of this statement.

Data submittal for 2-Day Evaporative Testing

Based on an engineering evaluation of appropriate evaporative emission testing, Jaguar Land Rover state that all vehicles in evaporative/refuelling family VJLXR0175M1C comply with the applicable two-day evaporative emission standard.

Jaguar Land Rover waive 2-Diurnal Evaporative emissions testing on this basis.

91 RON (Knock Sensor)

Pursuant to VPCD-97-01, Jaguar Land Rover's engineering evaluation states the city and highway fuel economy test result differences between 91 RON operation and 96 RON operation is within 3%, and there are no emissions increases (beyond normal test variability) using 91 RON fuel when tested on the FTP.

Data submittal waiver for Formaldehyde (HCHO) Measurement

Based on an engineering evaluation, Jaguar Land Rover states that light-duty vehicles included in this application comply with all applicable HCHO standards.

Data submittal waiver for Non-Methane Organic Gas (NMOG) Measurement

REVISED:

Based on test data from engineering programmes Jaguar Land Rover use the following

NMOG:NMHC ratios in order to express NMOG emissions:

Cold and Hot Start tests, E0 fuels: $\text{NMOG} = \text{NMHC} \times 1.03$

Cold Start tests, E10 fuels: $\text{NMOG} = \text{NMHC} \times 1.10$

Hot Start tests, E10 fuels: $\text{NMOG} = \text{NMHC} \times 1.03$

Data submittal waiver for Spit-Back testing

All Jaguar Land rover Gasoline fuelled vehicles are certified to the refuelling emissions standards in §86.1811-04(e), and inherently meet the fuel dispensing spitback standards as part of compliance with the refueling emissions requirements.

Compliance with the applicable standards is for the Full Useful life of the vehicle.

Fuel dispensing spitback testing of Jaguar Land rover vehicles is therefore waived in accordance with §86.1810-01(l).

Evaporative Leak Detection

JLR OBD system conforms to current OBD requirements covered in Section 1968.2 of Title 13, CCR.

JLR OBD system is capable of detecting 0.020" inch diameter orifice leakage in the evaporative emissions system.

SC03 Test Procedures

Jaguar Land Rover attests that NMOG+NO_x and CO exhaust emissions for vehicles tested using the SC03 test procedures incorporated in the "California 2026 and Subsequent Model Year Criteria Pollutant Exhaust Emission Standards and Test Procedures for Passenger Cars, Light-Duty Trucks, and Medium-Duty Vehicles", comply with the standards in 13 CCR 1961.4.(d)(4).

Quick Drive-away

Vehicles in this test group are not part of JLR's phase in for Quick drive-away as set forth in 13 CCR 1964.1(d)(2)(C)1(a))

Partial Soak

Vehicles in this test group are not part of JLR's phase in for Partial Soak as set forth in 13 CCR 1964.1(d)(2)(B)1)

REVISED:

**9. OBD Compliance Statement**

Jaguar Land Rover states that the OBD system for this test group meets the full intent of the clean air act as amended in 1970 section 202(m), and the applicable federal OBD regulations, contained in 40 CFR §86.005-17 and 40 CFR §86.1806-01. Furthermore, Jaguar Land Rover states that the OBD system complies with all the requirements of Title 13 CCR 1968.2.

				2.200
				1.720
				1.301
				1.000
				0.833
				0.64

General Description

The 8P80XPH is an electronically controlled, fully automatic, synchronous 8 speed overdrive transmission with input through a three phase, single stage torque converter. The torque converter incorporates an internal friction clutch which transmits engine torque mechanically when applied in either locked or controlled slip phase.

The shift points and converter clutch application are functions of throttle pedal position and vehicle speed. Each transmission calibration contains the individual shift points for the corresponding transmission application.

REVISED:

Special Features:

Electric Motor

- Permanent Magnet Synchronous Motor (Compact & powerful)
- Max power: 105kW
- Max Torque: 275Nm/202lb/ft
- Max power is not completely additional to ICE engine max power, as peak powers occur at different engine speeds
- Located coaxially within the auto transmission

Belt Driven Starter Motor also known as 'Belt ISG'

- Additional starter to provide instant, quiet re-starts of ICE engine during hybrid operation
- Rotates engine using serpentine belt on front of engine
- Conventional starter retained for cold engine start
- Although ISG hardware has generating capability, this is not used on the PHEV
- High Voltage Battery
- 398.2V Lithium-ion Battery (NMC Chemistry)
- 38.2kWh maximum capacity (31.8kWh usable)
- 453V Maximum Voltage
- 277 kg weight
- 51 miles EV range
- Samsung SDI supplier
- Non-servicable item

Regen Braking:

- Done through the Electric Machine
- Driver lifts off the accelerator pedal, VSC does a periodic calculation on how much electric braking that can be offered based on:
 1. EM Speed
 2. De-rate
 3. How much energy the battery can take(Limited by SOC & Battery temp)
- Capability is sent to the ABS and then the decision on how much regen braking should be done is then sent back to the VSC.
- During overrun the vehicle attempts to decelerate within a given profile, some of this is done with the EM
- The ABS system is the arbitrator of regen braking

REVISED:

Transmission Shifting

Gear-shift Interlock

A brake pedal/gear-shift interlock is incorporated in the gear selector mechanism. The gear selector lever may only be moved from the Park position if the ignition is "on" and footbrake is pressed.

Single Mode

During normal forward operation of the vehicle the transmission shifts automatically when the transmission selector is positioned in "Drive".

User Selectable Modes

Jaguar Land Rover has developed a range of driver selectable modes. Not all modes are available on all products and not all modes are considered to be on-road modes.

These driver selectable modes change driveability and transmissions calibratable comfort functions. The driveability functions which are modified are the comfort filters to provide a balance of control, response and comfort to suit the selected mode. The relationship between the physical driver pedal position and the ECU pedal position is changed, effectively making the vehicle feel more or less responsive. The functionality of emissions control strategies is not altered.

In Dynamic Drive mode, The PCM applies a scalar to make the accelerator pedal more sensitive. The transmission applies the same shiftpoints as in Normal drive mode. The PCM applies a scalar to make the accelerator pedal more sensitive.

Driver mode	On/Off-road
Normal mode	On-road
Dynamic mode	On-road
Grass - Gravel - Snow mode	Off-road
Dynamic mode	Off-road
Mud & Ruts mode	Off-road
Sand mode	Off-road
Low Range	Off-road

Chassis Dynamometer Operation

If the vehicle is going to be operated on a chassis dynamometer, disable the traction control facility immediately after selecting drive.

Shift Schedules

As defined in EV-CIS

Manual Transmission

Manual Transmissions are not available.

12.4 Special Testing Procedures

Cooling Fans

Additional cooling fans are not required for any of the standard emissions or fuel economy test cycles. Use of a speed tracking fan is optional for the FTP and Highway test cycles.

REVISED:

12.2.5.2 Fuel Tank Temperature Profile Report

Compiled By: Lee Dunn Date: June 2021

Subject

Fuel tank temperature profile for Range Rover PHEV

Summary

Vehicle tests were conducted to determine a fuel tank temperature profile for the MLA PHEV Evaporative family.

Conclusion

The fuel tank temperature profile determined by this test complies with Environmental Protection Agency procedure detailed in 40CFR 86.129.94.

Test Vehicle Specification

Evap Family: PJLXR0175M1C
Model: Range Rover PHEV
Transmission: 8 speed automatic
Fleet identity: 3KNVB005
Test Weight: 6500lbs

Test Location

Exponent Test Facility, 1850 W Pinnacle Peak Road, Phoenix, Az, 85027,
USA

REVISED:

REVISED:

14. Request for Certification

14.1 Statement of Compliance

Refer to Common Section, Section 14.

14.2. Request for certificate

Based on Jaguar Land Rover's good engineering judgment, all the vehicles described in this Application for Certification comply with all applicable intermediate and full useful life standards.

Therefore, Jaguar Land Rover herewith applies for a federal Certificate of Conformity and a California ARB Executive Order for Test Group VJLXT03.0PTC.

This Test Group complies with all applicable regulations contained in Title 40, Code of Federal Regulations, Part 86 and the California Code of Regulations.

Ian Munden
Manager
Emissions Certification for North America
Jaguar Land Rover

REVISED:

15. Other Information

15.1. Label according to 40 CFR § 86.1807-01 and according to California Motor Vehicle Emission Control Label Specifications.

15.1.1

15.1.2 Label Location: Under-bonnet.

REVISED:

Adjustable Parameters

There are no parameters present on any vehicle covered by this application that can be considered adjustable within the context of 40CFR Part 86.1833-01.

Fuel Specifications

Fuels Recommended to the Owner

Full statements concerning fuel recommendations are contained in the Vehicle Owners Handbooks.

Test and Service Accumulation Fuel

All test and service accumulation fuels relating to this Application for Certification are equivalent to those specified in 40CFR Part 86, Subpart S, and the California Exhaust Emission Standards and Test Procedures for 2001 and Subsequent Model Passenger Cars, Light -Duty Trucks, and Medium-Duty Vehicles. Specifications and/or analyses will be supplied on request.

Lubricant specifications

Engine

	Factory fill	Recommended to ultimate purchaser	To be used in test vehicles
Generic type	Hydrocarbon	Hydrocarbon	Hydrocarbon
Service designation	STJLR.03.5006 Castrol LG3 BOT 938	STJLR.03.5006 Castrol LG3 BOT 938	STJLR.03.5006 Castrol LG3 BOT 938
Viscosity	SAE 0W20	SAE 0W20	SAE 0W20

Automatic Transmissions

The transmissions are sealed for life and the factory fill materials are listed below. All lubricants are hydrocarbon based and contain no friction modifiers.

ZF 8P80XPH 8 Speed Automatic Transmission: ZF Lifeguard

Manual Transmissions

S6-45 6 Speed Manual Transmission: Castrol

REVISED:

**17. California ARB Information****17.1. Statements**

Vehicles covered by this application are not fitted with defeat devices.

All AECDS used on vehicles covered by this application are declared and described in section 16 of the application and the common section.

Test and production vehicles covered by this application do not use multiple maps in the engine management system. Modes used during on-road operation are identical to those used in testing.

Vehicles covered by this application do not use transmission calibrations which interact with the engine management or emission control systems in order to assist engine or catalyst warm-up.

The transmission calibration does not include different modes for on-road and dynamometer operation. Transmission behaviour is identical in both cases.

Also refer to Common Section, Section 17

17.2 Fill Pipe Specification

Refer to Common Section, Section 17

17.3 Projected Sales

Refer to Common Section, Section 16, Confidential Information

17.4 Evaporative Emission Deterioration**17.4.1.1. Worst Case Selection**

Worst Case selection is carried out according to the provisions in 40 CFR § 86.1828-01 (b)(3). Using good engineering judgment, JLR believe the Range Rover data are representative of a worst case vehicle for Range Rover and Range Rover Sport. The worst-case vehicle selection is highlighted in yellow in the table on the next page.

Canister size, canister material, fuel tank material, purge strategy and flow rates and refueling characteristics are common between all vehicles within the evaporative family.

Driver mode for evaporative testing was "Normal mode – D".

**17.4.3.2. Test Vehicle Description for Evap. Family VJLXR0175M1C**

Vehicle Identification Number	3PNM1021
Evaporative Emission Code	MLAP-23
Model	Range Rover
Emission Control System:	WR-HO2S/TWC/HO2S(2)/DFI/TC/CAC
Displacement	2996 cm ³
Engine Code	3.0AJPH-23
Evaporative Family	PJLXR0175M1C
Equivalent Test Weight	6500 lb.
Actual Vehicle Weight	
Curb Weight	6275 lb.
Drive Axle Weight	7605 lb.
Air Conditioning	Yes
Transmission Type	S8
Transmission Code	8P75PH
Axle Ratio	3.73
N/V Ratio	26.8
Tire Manufacturer	Pirelli
Tire Size	285/45R22

17.4.5.2.2.EPA Profile and Ambient Conditions

The temperature correction was conducted in accordance with the Federal Evaporative Emission Standards and Test Procedures after the following equation:

$$T_{i, \text{profile}} = T_i - T_o$$

T_i is the series of observed liquid fuel temperature during the drive (°F) where i is the incremental measurement in time

T_o is the liquid fuel temperature observed at the start of the specified driving schedule (°F).

$T_{i, \text{profile}}$ is the series of temperatures that comprise the relative temperature profile for table of T_i refer to Enclosure 1 of Section 12.
