Reevaluation of Petition No. OF0932 for
3',4'-dichloropropionanilide (Stam)
and its metabolite
Submitted by Rohm and Haas
Filed January 15, 1970
Revised October 6, 1970 Section F

INTRODUCTION

See evaluation dated March 3, 1970
See opinion dated March 6, 1970

The petitioner is now proposing the following tolerances:

- 75 parts per million in or on rice straw.
- 10 parts per million in or on rice bran, rice
polishings and other rice bran milling fractions.
- 6 parts per million in or on rice hulls.
- 2 parts per million in or on rough rice.
- 0.10 part per million negligible residue in meat, fat,
and meat by-products of beef and dairy cattle,
goats, hogs, horses, sheep and poultry.
- 0.05 part per million in eggs and milk.

The proposed tolerance ~~0.05~~ 0.05 parts per million in meat was changed
and 75 parts per million in rice straw was added at FDA's request
of September 4, 1970.

The residue data in this petition appears sufficient to support
the proposed revisions in tolerances.

CONCLUSION AND RECOMMENDATION

A favorable opinion is given

NOTE: A report on "Metabolism of Acylanilide Herbicides" submitted
with letter of May 25, 1970.
