Conclusions:

① Submission of data from W-90 request. Data is on MCPP acid. Also have preferred it on diethanolamine salt of MCPP & formulation.

② Data appears acceptable although only one level tested in test positive control levels. Since W-90 clearly can't complain. Moreover, data from other phenoxys shows ~~that~~ are not highly toxic so data is consistent with that.

Recommendations

R2 5-20-75 HPC

Data acceptable & included in files. If data becomes available for diethanolamine salt of MCPP and/or the formulation (359-548), we would appreciate its submission.
