Memorandum of Telephone Conversation on Dimethoate CAS # 356

February 1, 1988.

Dr. Lawrence Andrews of American Cyanamid called to inform me of the status of some information pertinent to the Peer Review of Dimethoate. The data will be forthcoming on or before February 23, 1988. These data include the independent review by Dr. Robert Squire of Johns Hopkins University of angiogenic tumors observed in the two year rat study. The data also includes historical control data from the performing laboratory on the incidence of angiogenic tumors in Wistar rats in their facility.

The company had previously projected that the data would be available to the Agency on January 31, 1988.
