

MAY 20 1987

NOTE TO THE FILES

SUBJECT: Meeting with du Pont

FROM: Mark T. Boodee  
Review Manager, Linuron  
Special Review Branch (TS-767C)

On May 19, 1987, I met with Marie Chubb of E.I. du Pont de Nemours and Co., Inc. at her request to discuss my progress in retrieving reviews of studies submitted months ago and du Pont's progress in collecting validation data for incomplete crop residue studies submitted last fall.

Marie gave me three copies of the study entitled "Supplement to: Linuron Residue Study - Volumes I and II". She stated that she hoped that the studies would aid us in validating the old residue data.

As she had requested through the PM team, I gave her reviews of the rat reproductive study and their rebuttal comments which they had submitted over a year ago. I informed her that the product chemistry (environmental fate) data, potato processing study, and rat metabolism rebuttal comments had been forwarded to either Rowe or Garbus. Marie informed me that protocols for the requested soybean processing studies are almost finished and that we should be receiving them before too long.

Finally, she requested that I check on the status of the LC50 Bluegill and Trout studies. Mrs. Chubb stated that she was certain that we had received the bluegill study but had no record of our receiving the other study. I stated that I would check my records to see if we had the study and if we had reviewed it already.

I escorted her to the door at 12:15 pm; 15 minutes after the meeting had begun.
