1.0 INTRODUCTION

The Ecological Effects Branch, HED has requested an assessment of the lowest practicable limit of detection for trifluralin in water, sediment and aquatic organisms. This information is needed to make a reasonable judgement as to the progress of a trifluralin field monitoring study.

2.0 DISCUSSION

EAB has no information on a method with a lower limit of sensitivity than 1 ppb and can make no judgement on the practicality of lowering the limit of sensitivity without knowing what level is needed. If lower levels must be detected, the registrant should be requested to develop a more sensitive method and submit it to the agency for review.
