## INTRODUCTION:

The data package is incomplete, and therefore, cannot be fully screened to assess the leaching potential of Endothal. More information is needed. The data gaps are: Leaching and Adsorption/Desorption 163-1), Aerobic and Anaerobic Soil Metabolism (162-1,162-2) and Field Dissipation (164-1).

Therefore, RD Data Review Record is being returned. We are retaining our hard copy of the fate data, (composed of the previously sent incomplete data package), in our EAB files for easy access in the future. When the registrant submits all of the above studies, then the data package will be complete. Upon completion of the package, please submit all the studies listed above. These studies, in conjunction with those previously submitted, can then be fully screened.

Catherine Eiden Section #1 Chemist
