Ecological Effects Branch/Hazard Evaluation Division

Validation Date: 10/24/80

Test Title: General Growth Studies
Lettuce, Tomato, Sugarbeet, Dwarf Bean

Conclusion: There was no effect on yield with 100,000 ppm of NAA.

Validation: This study is scientifically sound.

Materials and Methods: The seeds of lettuce (Chestnut Early Giant), tomato (Ailsa Craig and Early Market), sugarbeet (Desprez Elite), and dwarf bean (The Prince) were treated with NAA in talc at concentrations up to 100,000 ppm. All plants were grown to maturity in a greenhouse at Long Ashton, Bristol, England in 1939.

Results: In no case did the addition of NAA significantly influence the yield.
