SUMMARY OF INFORMATION REVIEWED AND FINDINGS

- The Confidential Statement of Formula for both the basic and alternate formulas contained two inert ingredients which had not been cleared by the Agency for use in pesticides. Following consultation with the registrant, the two ingredients were deleted from the formulation, and new data package, with a revised Confidential Statement of Formula and a new data barcode, was submitted for review.
- Please see D251422 for product chemistry review of this registration amendment request.
