7. CONCLUSIONS:

EAB does not have any environmental fate data in our files on this chemical.
The specific data requirements are given below under RECOMMENDATIONS.

8. RECOMMENDATIONS:

EAB has no environmental fate data on didecyl dimethyl ammonium chloride.

The data requirements for a swimming pool algaecide depend upon whether there is Direct Discharge, Indirect Discharge, or No Discharge.

Direct Discharge means "the release, treatment, or application of a pesticide product directly to water at sites within or directly connected to bodies of water to which wild animals, birds, fish, and similar organisms have free access".

The requirements for this type of discharge are:

- Hydrolysis
- Photodegradation-water
- Aerobic aquatic metabolism
- Anaerobic aquatic metabolism
- Leaching
- Water field dissipation
- Fish accumulation
- Aquatic nontarget accumulation

Indirect Discharge means "release, treatment, or application of a pesticide product to water at sites not directly connected to bodies of water to which wild animals, birds, fish, and similar organisms have free access".

The data requirement for this type of discharge is a hydrolysis study only.

No Discharge - A hydrolysis study is still required

If Direct Discharge of 5% BTC 99 occurs (in accordance with NPDES permit), then the data required are those listed above.

Due to the nature of the proposed use, the minimum data requirements will be hydrolysis and aqueous photolysis.
