Attn: Mr. Robert J. Taylor, PM 25

Dear Mr. Taylor:

SUBJECT: UPDATE ON HOWARD COUNTY, MARYLAND SITE GROUND WATER CONTAMINATION

Ciba's last correspondence to the Agency on this site was provided on November 4, 1992 and can be located under EPA MRID No. 42554201. Since that time it has come to our attention that contamination continues in the three affected wells. Detections of atrazine range from 4.2-16 ppb and metolachlor from 70-119 ppb. Other non-Ciba products are involved as well. All three homes have been put on a filtration system and analysis of filtered water samples indicates no contamination. Ciba Plant Protection will continue cooperating with state and local officials when requested to do so.

Sincerely,

Karen S. Stumpf

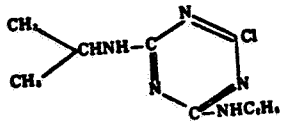
1. CHEMICAL: Common name(s): atrazine and metolachlor

1. CHEMICAL: Common name(s): atrazine and metolachlor

Chemical name(s): 2-chloro-4-(ethylamino)-6-(isopropyl amino)-s-triazine

Structure (s):



2. TEST MATERIAL: N/A

3. STUDY/ACTION TYPE: 6(a)2 Action - Update of registrant's 1988 and 1992 reports of atrazine and metolachlor residues > MCL/HA in 3 domestic wells located in Howard County, Maryland near a dealer (Mullinix) location.

4. STUDY IDENTIFICATION: Letter to Robert Taylor, dated 3/3/93, from Karen Stumpf updating the 1988 and 1992 reports of atrazine and metolachlor in 3 domestic wells in Howard County, Maryland. Another pesticide (alachlor) was also reported in the three wells, although alachlor is not a Ciba-Geigy product.

5.
REVIEWED BY: John H. Jordan, Ph.D.
OPP/EFED/EFGWB/Ground-Water Section
Signature: John H. Jordan Date: 6/1/93

6. APPROVED BY: Elizabeth Behl, Head
OPP/EFED/EFGWB/Ground-Water Section
Signature: EBehl Date: 6/1/93

7. CONCLUSIONS: Since 1988 there has been a continuing source of atrazine and metolachlor residues > MCL/HA at the former Mullinix blending operation site. Ciba-Geigy's 1988 6(a)2 report also included nitrate, another pesticide and petroleum products in tap water.

Current (1993) atrazine ground-water residues range from 4.2 to 16 ppb and metolachlor from 70 to 119 ppb. Atrazine residues above the MCL of 3 ppb and metolachlor > HA of 100 ppb may cause unreasonable adverse health effects.

A detailed report will be sent to EFGWB by the Howard County, Maryland Health Department.

8. RECOMMENDATIONS:

In cooperation with state agencies, Ciba-Geigy installed GAC filters on the three contaminated wells, because residue levels in ground-water are above the MCL/HAs. The EFGWB and the Howard County Health Department are concerned about the maintenance and care of the GAC filter systems. For instance, what is the schedule for inspection and replacement of the filters? At what ground-water residue concentration will the filtration systems be discontinued? A policy/plan statement for GAC filter operation and maintenance is requested. Also, the registrant should obtain specific well locations reported to have 6(a)2 residues, because the Agency requires residue reports with the specific well locations; specific well locations enable EFGWB to track ground-water contamination.

Please obtain as much detailed information as possible from the state agencies and send the data sheet, attached, to us.

9. BACKGROUND/DISCUSSION:

On October 28, 1988 Ciba-Geigy reported high levels of atrazine and metolachlor in three samples of tap water taken near a former dealer operation (Mullinex) in Howard County, Maryland. Ciba-Geigy confirmed levels of 43 ppb atrazine and 188 ppb of metolachlor. Analyses by county health officials showed 39 ppb atrazine and 231 ppb metolachlor.

Ciba-Geigy indicated that the dealer has not been able to offer any information which would lead to identification of the cause for the contamination. The registrant indicated at the time of the initial report, in 1988, that the residues were a concern to them and that they would investigate, but no report of their investigation has been received to date. Prior to this (3/3/93) 6(a)2 submission, (EFGWB #93-0528), the last correspondence concerning this (Mullinix) site was received on 11/4/92.

The County Health Department said that the Mullinix site is located on route 94 near Lisbon, Maryland approximately 1 1/2 mile south of route 70 near the intersection of route 94 and Mulinix road. The County Health Department is sending EFGWB a report describing the site.
