Attached, please find the EFGWB review of:

Reg./File #(s): 080803-0

Common Names: Atrazine

Type of Product: Herbicide

Product Name: _____

Company Name: CIBA-GEIGY

Purpose: Review of FIFRA 6(2)(a) surface water monitoring data

Action Code: 405

EFGWB #(s): 92- *0466*

Total Review Time: 0.5 day

This review is of a summary of data (421669-01) on the concentrations of atrazine and atrazine degradates in samples collected monthly October 1990 to March 1991 from Hoover Reservoir which serves Columbus, Ohio.. The data summary was submitted by CIBA-GEIGY in compliance with FIFRA 6(2)(a).

1. CHEMICAL:

Common Name: Atrazine

Chemical Name: 2-Chloro-4-ethylamino-6-isopropylamino-1,3,5-triazine

Type of Product: Herbicide

Chemical Structure:

Physical/Chemical Properties

Molecular Weight: 354

Physical State : White crystalline solid

Aqueous Solubility: 70 mg/L @ 22°C

Vapor Pressure: 3.0×10^{-7} mm Hg

Log Octanol/Water Partition Coefficient 2.33 to 2.71

2. TEST MATERIALS:

Not applicable.

3. STUDY/ACTION TYPE:

Review of FIFRA 6(a)(2) surface water monitoring data.

4. STUDY IDENTIFICATION:

D173497/421669-01: Letter dated 1/3/92 from K. Stumpf of CIBA-GEIGY to R. Taylor of RD/OPP.

5. REVIEWED BY:

Henry Nelson, Ph.D., Acting Section Head *H Nelson*
Surface Water Section

6. APPROVED BY:

Hank Jacoby, Chief
Environmental Fate and Groundwater Branch
Environmental Fate and Effects Division/OPP

7. CONCLUSIONS:

(1) Samples were collected monthly from October 1990 to March 1991 from the Hoover Reservoir. Three of the 6 samples (October, November, and December 1990) had atrazine concentrations exceeding the MCL (3 ug/L) ranging from 6.0 to 6.3 ug/L. Atrazine concentrations in the January, February, and March 1991 samples were all below the MCL ranging from 0.58 to 1.7 ug/L.

(2) One or more of 3 chloro-triazine degradates of atrazine (G-30033: 2-amino-4-chloro-6-isopropylamino-s-triazine; G-28279: 2-amino-4-chloro-6-ethylamino-s-triazine; and G-28273: 2,4-diamino-6-chloro-s-triazine) were detected in 4 of the 6 samples at concentrations ranging from 0.23 to 1.5 ug/L.

(3) Atrazine concentrations exceeding the MCL (3 ug/L) are frequently reported for some surface water samples collected from

numerous locations in the corn belt in late April through June. However, atrazine concentrations in those locations generally decline to below 1 ug/L by the late summer or early fall and remain below 1 ug/L through early spring. It is unusual for samples collected in October, November, and December to have atrazine concentrations exceeding the MCL such as those from the Hoover Reservoir.

(4) The results of the analyses were summarized by CIBA-GEIGY in their 1/3/92 letter, but the results for individual samples were not provided. No information was provided on the hydrological characteristics of the lake or on the sampling, analytical, or QA/QC methodologies employed. Therefore, EFGWB cannot verify the representativeness or accuracy of the data, nor speculate on the causes of the relatively high levels of atrazine contamination (see recommendations).

8. RECOMMENDATIONS:

CIBA-GEIGY should provide the information cited as missing in item #4 of the conclusions section when they submit either an interim or final monitoring report. However, it is generally unnecessary for CIBA-GEIGY to submit interim monitoring reports or data summaries (such as this) covering sampling periods of less than one year. The reason is that under new drinking water regulations, MCLs are compared to annual average concentrations in 4 samples collected quarterly. Therefore, short term averages exceeding the MCL and individual samples with concentrations exceeding the MCL need not be reported more frequently than annually unless they are so high, the annual concentration will either automatically exceed or have a high probability of exceeding the MCL. For example, a more frequent than annually reporting of individual concentrations exceeding 4 times the MCL might be justifiable, since such concentrations would automatically cause an average annual concentration based upon 4 quarterly samples to exceed the MCL.

9. BACKGROUND:

The CIBA-GEIGY letter contains FIFRA 6(a)(2) data submissions on atrazine and atrazine degradate concentrations in samples collected October 1990-April 1991 from Hoover Reservoir which serves Columbus, Ohio.

10. DISCUSSION: See conclusions.

11. COMPLETION OF ONE-LINER Not applicable

12. CBI INDEX: Not applicable.
