

DATE: January 4, 1980

SUBJECT: ALERT MEMO -- re: Propazine - oncogenicity potential. Tox Chemical No. 184

FROM: Robert D. Coberly, Decision Unit Leader - Registration
Toxicology Branch, HED TS-769 *W*

TO: M. Adrian Gross, Chief
Toxicology Branch, HED TS-769

At the high-dose of propazine (1000ppm) in rats there was a significant increase in mammary adenocarcinomas in female rats. The final report of the 2-year rat study with propazine should be given priority review status.
