7. CONCLUSIONS:
The anaerobic aquatic metabolism study (MRID #41050001) is being returned unreviewed to RD as per Policy Note #31.

8. RECOMMENDATIONS:
Please send the study back to EFGWB for review along with other submitted studies when a second round review is scheduled for benomyl

9. BACKGROUND:

Benomyl is a fungicide registered for use on a variety of food crops including rice, soybeans, apples, oranges, peaches, and pecans. Application rates for benomyl range from 0.0625 to 1.5 lb ai/acre.

The current status of environmental fate data requirements for registering benomyl end-use products for application to terrestrial food crops and rice is as follows:

(1) Satisfied
161-1. Hydrolysis
161-2. Photodegradation in Water
161-3. Photodegradation on Soil
165-4. Accumulation in Fish

(2) Not Satisfied
162-1. Aerobic Soil Metabolism
162-2. Anaerobic Soil Metabolism
162-3. Anaerobic Aquatic Metabolism
162-4. Aerobic Aquatic Metabolism
163-1. Leaching and Adsorption/Desorption
164-1. Terrestrial Field Dissipation
164-2. Aquatic Field Dissipation
165-1. Confined Accumulation in Rotational Crops
165-3. Accumulation in Irrigated Crops

(3) Reserved
164-5. Long Term Terrestrial Field Dissipation
164-5. Long Term Aquatic Field Dissipation
165-2. Field Accumulation in Rotational Crops

(4) Waived
163-2. Laboratory Volatility
163-3. Field Volatility

10. DISCUSSION:

A registration standard was published for benomyl in 1987. Under policy note #31, studies submitted in response to a Registration Standard are normally retained by PMSD until a Second Round Review is scheduled. Benomyl is not in Special Review, and is not currently undergoing any other type of review within OPP according to RD.
