OFFICE OF
PESTICIDES AND TOXIC SUBSTANCES

Memorandum

To: L. Rossi, Product Manager
Team #21, FHB/RD

From: James W. Akerman, Chief *Henry T. Crowen*
Ecological Effects Branch/EFED

Subject: 3125-236
Proposed uses of Nemacur 15% Granular (fenamiphos)
on garlic and non-bearing strawberries

In a June 16, 1988 analysis of granular pesticides, EEB concluded that fenamiphos was one of eight granular pesticides that pose the greatest risk to birds. Based on this analysis, the Hazard Evaluation Division and the Registration Division recommended to the OPP Policy Group (on July 28, 1988) that fenamiphos and the other seven chemicals be placed or continued in Special Review (two chemicals were already in Special Review). An implementation strategy is currently being developed before taking this recommendation back to Policy Group.

Based on the science findings in EEB's granular analysis concerning risk to birds from fenamiphos, EEB recommends that no new uses of granular fenamiphos be considered at this time.

1. SUBJECT OF AMENDMENT (Continued)

Based on information provided by IR-4, there is need for an effective post-plant nematicide for use on strawberry nursery stock. In order to produce certified strawberry planting stock, the plants must be virus-free and essentially free of injurious nematodes. Although the fields are treated (usually by fumigation) before strawberry nursery stock is planted, recontamination by nematodes from adjacent untreated fields does occur during winter months. Since these re-introduced nematodes can multiply very rapidly in the fumigated soil, post-plant control measures are needed.

[IR-4 reports that two post-plant band applications of NEMACUR 15% Granular 4 to 8 weeks apart at the rate of 2.0 pounds active ingredient/acre provide effective control of nematodes infesting strawberry nursery stock. On this basis, we are requesting amended registration of NEMACUR 15% Granular to add the claims for use on non-bearing strawberry nursery stock as shown in the enclosed draft label amendment dated 8/20/85. We request that the Agency waive efficacy data requirements for this application in accordance with its statutory authority under FIFRA, as amended.

This proposed use of NEMACUR 15% Granular is considered to be a non-food use. This use should not result in residues in edible fruit for the following reasons:

- (1) Strawberries being grown for transplants are stripped of all flowers. This flower removal is necessary to promote vegetative growth resulting in healthy, vigorous transplants;
- (2) The last application of NEMACUR 15% Granular to strawberry "mother" plants in the nursery is made at least 20 months before any fruit is picked from transplants by the final purchaser/grower.
- (3) When transplants are harvested from the nursery all soil and most leaves are removed during cleaning and preparation for shipment and sale.

In the last several years the Agency has permitted the use of NEMACUR on non-bearing strawberry nursery stock in the manner described above under FIFRA Section 18 exemptions in at least one state (Maryland).

DIRECTIONS FOR USE

CROP	PEST	DOSAGE NEMACUR 15% G BAND: Ozs/1000 ft. row	REMARKS
Non-bearing Strawberry nursery stock	Nematodes	17 ozs for any row spacing (or 13.8 pounds per acre on 40 inch rows)	BAND: Apply specified dosage in ozs. per 1000 ft. of row in a 12 inch band over the row immediately after transplanting and incoporate to a depth of 1-2 inches with cultivation equipment. Apply a second application in a 12 inch band over the row 8 weeks after transplanting. Incoporate by cultivation or by sprinkler irrigation (1 in. of water) immediately following application. Do not apply more than two applications to non-bearing nursery stock. Use only on strawberry nursery stock that will not be harvested for fruit within 20 months after application.

1. SUBJECT OF AMENDMENT (Continued)

Data supporting of this application are listed in the enclosed Attachment I "Research Data References, NEMACUR Fenamiphos Insecticide-Nematicide." Included with this application is a completed and signed Attachment B "Certification with Respect to Offer to Pay and General Offer to Pay" in compliance with PR Notice 84-4. As indicated on the attachment, we are proceeding under the "Cite-All" method of support. The most recent list of pesticide data submitters dated May 8, 1984 shows that only Mobay and Pineapple Growers Association of Hawaii (PGAH) have submitted data on fenamiphos (Chemical No. 100601). Although it is our opinion that the PGAH data are not relevant to this application, we note that we have previously submitted a letter which authorizes the Agency to review PGAH data in connection with the review of registration applications for fenamiphos submitted by Mobay.

If, during the course of the Agency's review of this application, pertinent comments or questions arise, we would like to receive a copy of the actual review notes. Having a copy of the actual notes aids us in formulating timely replies to the Agency.

1. SUBJECT OF AMENDMENT (Continued)

The Agency has established a tolerance at a level of 0.5 ppm for residues of NEMACUR fenamiphos and its sulfone and sulfoxide metabolites in or on garlic. This tolerance was established to cover residues in or on garlic imported into this country. From studies conducted in California under direction of the IR-4 Technical Committee, it has been found that residues resulting from the use of NEMACUR 15% Granular to control nematodes in domestic garlic are less than 0.5 ppm. A copy of the data obtained in the IR-4 tests is enclosed. As a result of this work, the IR-4 Technical Committee requested that Mobay apply for registration of NEMACUR 15% Granular for use on garlic. The proposed claims for this use are set forth in the enclosed draft label amendment dated 6/25/85.

We request that the Agency waive the requirement of efficacy data for this application in accordance with the statutory authority conveyed by FIFRA, as amended.

Included with this application is a completed and signed "Certification with Respect to Citation of Data and General Offer to Pay" in compliance with PR Notice 85-3. As indicated, we are proceeding under the "Cite-All" method of support. The most recent list of pesticide data submitters dated May 8, 1984 shows that only Mobay and Pineapple Growers Association of Hawaii (PGAH) have submitted data on fenamiphos (Chemical No. 100601). Although it is our opinion that the PGAH data are not relevant to this application, we note that we have previously submitted a letter which authorizes the Agency to review PGAH data in connection with the review of registration applications for fenamiphos submitted by Mobay.

If, during the course of the Agency's review of this application, pertinent comments or questions arise, we would like to receive a copy of the actual review notes. Having a copy of the actual notes aids us in formulating timely replies to the Agency.
