BEST AVAILABLE COPY

Dear Mr. Ospenson:

This acknowledges receipt of your letter of March 7, 1975, transmitting a certified check for \$3,000, an application for extension of a temporary permit, a pesticide petition for a temporary tolerance for residues of the insecticide acropate (0,3-dimethyl acetylphosphoramidothioate) and its cholinesterase-inhibiting metabolite, 0,3-dimethyl phosphoramidothioate in or on grapes at 1 part per million (ppm), and a food additive petition for a tolerance for residues of acropate and its cholinesterase-inhibiting metabolite in raisins at 10 ppm.

The Pesticide Petition has been designated Pesticide Petition No. 501604 and the Food Additive Petition has been designated Food Additive Petition No. 5H5081 and it is being filed today. Please note that there is no fee involved for the review of Food Additive Petitions and that the correct fee for the review of the pesticide petition is \$2,000 as specified in § 181.33(a)(2). By copy of this letter we are requesting our Fiscal Branch to refund the \$1,000 overpayment.

We are forwarding the petitions to our scientific branches for review and evaluation. However, a preliminary review of your requests indicates the following:

1. No data for residues in or on grape pomace was submitted. Without such data we are unable to make a judgment on the amount of residues present in this commodity and thus require a label restricting sale of grapes to the fresh fruit market only.
2. An inert ingredient [redacted] in the 75% Soluble Powder formulation is not adequately identified. We need to know the chemical components of this ingredient to determine if they are exempt from the requirement of a tolerance as listed in § 181.1001 (40 CFR). If they are not listed you should request that they be listed. As the components will have to be exempt before permanent tolerances can be granted.

to [redacted] ?

2

Please be advised that at present all requests for temporary tolerances and applications for temporary permits are reviewed and issued for a period not to exceed one year. Therefore your tolerance requests will be considered in conjunction with the temporary permit now in effect (i.e. experimental program involving application to 70 acres). An extension of these tolerances and the amended permit (i.e. experimental program involving application to 1,000 acres) must be requested for the second year's testing as specified in 40 CFR § 162.17, and as specified in § 180.33 (40 CFR) a fee of \$2,000 will be required for the extension of the temporary tolerance on grapes. *should be 7*

Sincerely yours,
