RELEASABLE

THRU: Charles L. Trichilo, Chief
Residue Chemistry Branch
Hazard Evaluation Division (TS-769)

This amendment was submitted in response to our (R. Taylor) reject letter of 4/22/81, which advised the petitioner of the need to revise Section F to propose a 0.5 ppm tolerance for peanut hay, forage, and hulls (shells).

This request was in accordance with the recommendation in our (M. Nelson) review of 5/30/80, and the petitioner's present submission (revised Section F) resolves the deficiency raised therein.

We note that a successful MTO has now been completed (see 1/19/81 memo, R. Storherr) of the proposed HPLC enforcement method for these substrates. This removes that contingency (see aforecited review) previously placed on a favorable recommendation for the proposed tolerances.

Accordingly, if TOX and EFB considerations permit, we recommend that tolerances be established (40 CFR 180.364) for the combined residues of glyphosate and its metabolite, aminomethylphosphonic acid, as follows:

0.1 ppm - peanuts
0.5 ppm - peanut forage, hay, and hulls

A revised International Residue Limit Status sheet is attached.
