

UNITED STATES ENVIRONMENTAL PROTECTION AGENCY

OK

DATE: March 4, 1980

SUBJECT: EPA Reg. #524-308; Glyphosate

CASWELL #661A

FROM: William Dykstra
Toxicology Branch (TS-769)

WMD 3/4/80

WSW

TO: Robert Taylor
Product Manager #25
Registration Division (TS-767)

Action Requested: Review amendment to remove crop rotation restriction from label.

Recommendations:

1. The review by EFB shows that crop residue levels ranging from 0.16 to 0.54 ppm at 30 day rotational intervals in rotational crops could be expected from glyphosate treated soils.

These residue levels are considered toxicologically significant and support the rotation crop restriction.
