SUBMISSION PURPOSE Update on chronic fish studies

CHEMICAL & FORMULATION \_\_\_\_\_

105.0

CONCLUSIONS

1. The Environmental Safety review staff has reviewed the progress report (dated March 30, 1976) on chronic fish studies conducted with PROWL herbicide and finds the report acceptable. A copy of this report will be included in our files.
2. A review of our files indicate that prior to consideration of registration at renewal, the following data must be submitted as per the new Sec. III Regulations.
  - 1) An acute oral LD<sub>50</sub> for either the mallard duck or bobwhite quail.
  - 2) An acute 48-hr. LC<sub>50</sub> for an aquatic invertebrate.

Dear Mr. Taylor:

Subject: PROWL® herbicide  
Fish — Chronic Feeding Studies  
Progress Report

Attached are five copies of a progress report of the chronic exposure of PROWL herbicide to fathead minnows. As you will find in reading the report, the studies are progressing without any adverse effects.

This is to advise you that we are incorporating into the study the changes suggested in the letter from Bionomics dated March 17, 1976 — that is, asbestos drain-tile spawning substrates and the suggestion as to the number of adult fish and the ratio of males to females (3 males and 7 females).

We will continue to submit progress reports as they become available.

Very truly yours,

*F. Ray Barron, Jr.*
